The Labour Month in Brief

Continued gains in average wages, accompanied by a check in the upward trend of the cost of living, brought about an improvement in the average "real" weekly earnings of Canadian industrial employees during October and November. Although basically sound employment conditions continued throughout November, activity was slackening in the seasonal segment of industry. There was comparatively little time loss from industrial disputes.

Employment

Employment in non-agricultural industries continued to rise up to November 1, according to the Dominion Bureau of Statistics index of industrial employment (based on returns from firms employing 15 or more employees).

However the decline of seasonal activity in such industries as farming, construction and transportation brought about an increase in the number of unplaced job applicants registered at employment offices.

This figure rose from 86,080 at mid-September to 120,543 at November 18 and 164,561 at December 16, 1948. The rise for this period was somewhat larger than over the corresponding period in 1947, one of the factors being that the total Canadian labour force had increased by about 100,000. In mid-December, 1947, there had been 134,705 registered job applicants at employment offices.

One of the effective methods used by the National Employment Service in organizing employment market conditions to the best advantage of workers and employers, is to provide machinery whereby workers can be recruited for jobs anywhere in the Dominion. Known as "clearance," this process permits the filling of an employer's order from outside the area of a local office. The order may be sent to adjacent offices (the "zone of first clearance"), or for regional or Dominion-wide circulation, or to a specific region where a labour

MOVEMENT OF WORKERS BY NATIONAL EMPLOYMENT SERVICE November, 1944 to October, 1948

(1) REFERS TO THE NUMBER WHO HAVE BEEN TRANSFERRED TO VACANCIES OUTSIDE OF THE TERRITORY SERVED BY THE REPRESENTING EMPLOYMENT OFFICE.

NEW YEAR'S MESSAGE OF THE HON. HUMPHREY MITCHELL, MINISTER OF LABOUR

On the eve of another New Year, I wish to extend my greetings to the workers of Canada.

Nineteen hundred and forty-eight was a good year for Canada.

We entered into it with a spirit of optimism based on confidence in the continued strong domestic and foreign demands for our products, and the prospects of high levels of employment.

At the end of 1948, we know that our optimism has been more than justified. For the second time in two years, employment passed the five million mark. Jobs in industry exceeded the 1947 level by more than four per cent, and has been about eight per cent above the wartime peak.

The labour force grew by about 100,000 and its effectiveness was increased by a decline in labour disputes, especially in the basic industries. That is to the credit of both labour and management. There is much to indicate that the same spirit of co-operation and compromise will continue with employment and production remaining high.

We are very fortunate compared to those countries which have had to bear the direct impact of the war. We are able to provide ourselves with the necessities of life, a fair measure of the luxuries, and, what is more important, we have had freedom to enjoy them.

It is my earnest hope that 1949 will be a year of happiness and fulfilment for all Canadians.

NEW YEAR'S MESSAGES OF LABOUR LEADERS

In their New Year's messages Canadian labour leaders reviewed social and industrial conditions in Canada during 1948.

Mr. Percy R. Bengough, President of the Trades and Labour Congress of Canada declared that "progress has been made in securing beneficial laws in which all participate, and as a result, the standards of living in Canada compare favourably with most other countries." In his opinion, however, "we have failed to enjoy more than a tithe of the benefits which modern scientific research and discovery and the mechanization and organization of industry have made available." He contended that any wage increases that have been obtained have been more than offset by increases in the cost of living and that, as a result, the TLC "will continue to fight for government control of prices."

Referring to "subversive elements of various types in Canada," Mr. Bengough declared that "they are being discovered in all walks of life . . . they are abhorred as much within as without the labour movement. . . . But we must keep these elements in full view where we can know what they are doing and where they are doing it. Let us all remember that you can't kill ideas by persecution."

Mr. Bengough said that "the mere fact that any wrong-doing, either real or imaginary, on the part of the labour movement, is front page news is in itself a clear and outstanding demonstration of the established good citizenship of our organized

workers. Squabbles in the trade union movement occur and will occur simply because it is a democratic movement. When they fail to develop the movement will have lost either its democracy or its very life, or both."

Mr. A. R. Mosher, President of the Canadian Congress of Labour, affirmed his belief that "the outlook for the future is far brighter because organized labour is becoming stronger, and is devoting more and more time and attention to fields of activity outside the narrow range of collective bargaining."

Referring specifically to the threat of Communism, Mr. Mosher pointed out that "the labour movement, particularly in Canada, the United States and Great Britain is openly endeavouring to get rid of Communists in trade unions by exposing their activities and arousing opposition to them." He asserted, however, that "opposition to Communism is not nearly enough. . . . The recognition of the need for better economic and social conditions, higher standards of living, and greater opportunity for freedom and happiness, as the strongest bulwark against Communism, is one of the most hopeful signs of the times," he said.

The primary objectives of labour, he continued, are the improvement of wages and working conditions through the negotiation of collective agreements. But labour unions also "promote industrial harmony

(Continued on page 74)

NOTES OF CURRENT INTEREST

Production committees now cover 300,000 workers

"Both organized labour and management are manifesting a growing appreciation of the benefits to industry of joint consultation on production problems," the Honourable Humphrey Mitchell, Minister of Labour, stated on December 6.

The Minister was commenting on the steadily increasing number of labour-management production committees throughout Canadian industry, as reported to a recent meeting of the Advisory Committee (representing labour and management) of the Labour-Management Co-operation Service of the Industrial Relations Branch of the Department of Labour. He said that there were now 595 committees on record, representing approximately 300,000 workers.

Apart from the mutual financial benefits derived from the suggestions of these committees, there is the drawing-together of labour and management in a bond of understanding resulting from the recognition of workers as individuals with ideas, and from collaboration in solving joint problems which concern the welfare of both groups. Such unity brings better working conditions resulting in higher morale of workers with greater efficiency and increased production—production so vital to the success of our present economy, the Minister pointed out.

A breakdown by industrial groups of 582 committees in operation at September 30, 1948, shows that recognition of the value of these committees is not confined to any specific industry: manufacturing has 353 committees, involving 161,742 workers; mining, 41 committees, involving 25,224 workers; communications, 40 committees, involving 10,588 workers; service, 21 committees, involving 12,337 workers; and transportation, 119 committees, involving 62,025 workers.

Among the industries making up the total for the manufacturing group are: textile products, 24 committees; pulp and paper products, 38 committees; lumber and its products, 22 committees; edible plant products, 27 committees; leather products, 25 committees; iron and its products, 90 committees; chemicals and allied products, 21 committees.

In communications, the telephone industry had 32 of the total number of committees, involving 7,000 of the total number of workers.

The largest representation in the transportation industry was steam railways, with 103 committees, involving 57,451 workers.

Polish veterans complete employment agreement

Hon. Humphrey Mitchell, Minister of Labour, announced recently that about 2,800 of the 4,500 Polish veterans who came to Canada for a two-year period of employment in agriculture completed their agreement at the end of November, and are free to choose any type of employment they wish.

Mr. Mitchell recalled, "when the original plan was decided upon it was hoped that it would provide an opportunity for a new life in a free land for former comrades in arms, who by circumstances at the war's end were left without a country, and at the same time would provide Canada with urgently needed manpower for maintaining the level of food production necessary at home and to fulfil our vital commitments abroad. Our expectations have been fulfilled."

The Minister said that the manner in which these new Canadians, now two years on their path to full Canadian citizenship, generally had honoured their agreements, was worthy of high commendation. Other later immigrants to Canada would do well to look to the majority of the Polish veterans for examples in the keeping of faith, and personal initiative and industry in their drive to establishment in their jobs and communities.

In order that plans could be made to help these men at the expiry of their terms of agreement, a questionnaire was sent out by the Department of Labour to every Polish veteran asking what he wished to do in the future. Each man was advised to remain in agriculture unless he had made definite arrangements for employment in some other industry. To date, 1,550 answers have been received to these questionnaires.

An examination of these answers reveals that 40 per cent of those completing the questionnaire indicate a desire to remain in agriculture. About 50 have either bought farms or are planning to do so in the near future, while others had rented farms and were operating them on a crop-sharing basis.

A desire for work in industry was expressed by 50 per cent, but a large number of this group planned to go to the

bush this winter and return to agriculture in the spring. Some of these men planned to use their earnings in the woods together with their savings to purchase farms of their own next year. The remaining 10 per cent are still undecided as to their future plans.

More than 1,500 of the total number of Polish veterans in Canada have been granted permanent landing status and applications of the others are being dealt with as speedily as possible. When they first came to Canada, arrangements provided that they were to complete their terms of employment before being allowed to apply for "permanent landing". The conduct of the majority, however, was so satisfactory that the Canadian Government decided to shorten this waiting period before they were allowed to take this first step towards citizenship. The Minister explained that the granting of "permanent landing" did not relieve the veteran of his responsibility to his undertaking.

Approximately 1,600 additional Polish veterans were brought to Canada in 1947 and are scheduled to complete their farm employment agreements in the summer of 1949, bringing the total now in Canada to around 4,500. Of this total, eight have returned to Europe for family reasons, 17 have died, and approximately 250 have been released from their agricultural agreement on medical grounds. This group were permitted to accept other employment more suitable to their health and have been spread among different industries including bakeries, steel factories, shoe repair shops, paper mills, and light orderly work in hospitals.

Every Polish veteran upon completion of his undertaking will be given a certificate similar to those given Displaced Persons under the same circumstances. Veterans who do not receive their certificate within a reasonable time after completion of their two-year period in agriculture are advised to write to the Deputy Minister of Labour, Ottawa, Ontario, and certificates will be forwarded if they have qualified.

**Success of
Maltese
immigrants
in Canada**

Hon. Humphrey Mitchell, Minister of Labour, said on November 17, that two officials of the Maltese Government, who recently completed a goodwill tour of Ontario, have expressed themselves as highly gratified by the position and prospects of Maltese immigrants settled in Canada during the past year.

The officials, Hon. J. J. Cole, Minister of Labour and Emigration in the Maltese Government, and J. Axisa, Director of Emigration, talked to many of their former countrymen in the course of the tour, which was arranged for them by the Dominion Department of Labour.

They stated that everything they had seen and heard indicated that these immigrants were happy in Canada. They were settled in jobs, and were becoming good citizens of their communities.

Employment prospects for students in engineering and commerce

The quarterly Bulletin of the Technical Personnel Division of the Department of Labour for the quarter ending September 30, presents an analysis of a survey relating to the employment and salary prospects of the 1949 and 1950 classes in science in Canadian universities.

Information gleaned from thousands of employers across Canada and also from the experiences of the classes of 1948 (a total of approximately 1,000), formed the basis of the survey. "A substantial number of employers" reported on graduates who entered their employment following graduation day last spring.

With regard to starting salaries, only 7.7 per cent were above \$225 a month and only 3.9 per cent were below \$175 a month. The most "popular" figure was \$200 a month and the average, \$205 a month. The 1,000 cases included practically every branch of engineering and pure science. They also gave "a wide coverage both geographically and as to type of employer."

Concerning the size of the graduating classes in engineering in 1949 and 1950, it was estimated that about 3,200 will graduate in 1949, with the distribution of courses and universities much the same as in earlier estimates. From 3,500 to 3,600 of a total university enrolment of about 3,950 will probably graduate in 1950.

It is interesting to note the experience of the class of 1950 in the way of failures and withdrawals. When this group was in its first year the enrolment was slightly under 6,000. In its second year the number had decreased to just over 4,600. In its third year (1949), as already stated, it stands at about 3,950. This, it is stated, is, broadly speaking, not unlike the experience of normal peacetime classes in engineering, except that the present actual number is exceptionally large due to heavy veteran enrolment.

The Bulletin also gives the approximate present enrolment in commerce courses in 16 Canadian universities. Of the specialized courses of study commerce ranks second to engineering in numbers among veteran students. No attempt was made to estimate the number of commerce students who will graduate within the next two years, but the present total enrolment is given as 1,552 for the class of 1949 and 1,416 for the class of 1950.

**Formation
of "anti-
Communist"
group by
Frank Hall**

Frank Hall, Vice-President of the Brotherhood of Railway and Steamship Clerks, announced on December 2, the formation of an "anti-Communist" group consisting of 32 representatives of international unions affiliated with the Trades and Labour Congress of Canada.

Mr. Hall was quoted as saying that the principal aim of the new group, was "the cleaning up of Communists within the Trades and Labour Congress of Canada."

He stated that the group would be known as "the Canadian Association of International Union Representatives," and that he had been elected as its chairman after a three-day meeting in Montreal.

Other officers of the new organization are: Vice-chairman, Sam Finlay, International Brotherhood of Boilermakers; Secretary, A. R. Johnstone, Hotel and Restaurant Employees; Executive members, Bernard Shane, International Ladies' Garment Workers' Union, Arthur D'Aoust, International Brotherhood of Paper Makers, Robert Hewitt, Brotherhood of Railway Carmen, and A. G. Hearn, Building Service Employees' International Union.

Mr. Hall did not give a complete list of the unions involved. His statement said in part:—

"On the initiative and representations of the Canadian officers of these unions, the executive boards of the respective organizations and the Executive Council of the American Federation of Labour have the subject of Communism and Communist influence within the Trades and Labour Congress under inquiry and consideration.

"Pending the outcome of these proceedings we do not care to elaborate on the subject. We expect to discuss it further with the AFL Council in the near future."

According to the Canadian Press, Mr. Hall also said that the new organization had been set up, not as an opposition body in the ranks of labour, but as an association for a specific purpose.

Mr. Hall had led an opposition group at the TLC Convention held in Victoria in October, an account of which appeared in last month's *LABOUR GAZETTE* (p. 1366). He and his union had been suspended in September for negotiating the merger of the Canadian Lake Seamen's Union into the AFL Seafarers' International Union, in opposition to the existing TLC affiliate, the Canadian Seamen's Union, which, the Hall group charged, was Communist-led.

The President of the TLC, Percy Bengough, was quoted in the press to the effect that the TLC would not take any action over the formation of the new group. "There's nothing to stop them getting together," he said, adding that he did not think their action conflicted with TLC policy. Speaking in Hamilton a few days later he asserted that the Congress is not—and will not—be controlled by Communists.

Meeting prior to the AFL Convention in November, the AFL Executive Council considered the position of those of its affiliated unions which had locals in Canada affiliated with the TLC. Representatives of the Hall group were present at this meeting. The Council decided to defer action until its next session in January.

**Survey of
production
in Canada
1938-46**

A recent publication of the Dominion Bureau of Statistics, *Survey of Production and Related Factors*, gives an analysis of production in the various Canadian industries between 1938 and 1946.

According to the study, the dollar value of production in 1946 was about two and one-third times that of the pre-war year, but was 7.3 per cent less than in 1944, the year of peak wartime production. Estimates for 1947 and 1948 show a further substantial increase.

The Bureau has also attempted to measure the changes in the volume of production. The report states that a "rough impression" of the expansion in the volume of production is obtained by adjusting the dollar value to take account of the price rises that have occurred.

When this was done, the report states, "the outstanding feature was the marked expansion in the volume of manufacturing production. According to the method employed, the output in physical terms was more than twice as great in the maximum for the war period as in 1938, a post-war reaction occurring in 1945 and 1946."

Based on 1938 as 100, the index of the volume of production in manufacturing was

233.2 in 1944 and 180.3 in 1946. Construction, on the other hand, which had risen in the early war years, dropped to 98.6 in 1944, but rose sharply to 152.9 in 1946. The mining index declined after 1941, and was 91.1 in 1946. Agriculture fluctuated considerably, a bountiful harvest in 1942 boosting the index to 191.5. The agriculture figures for all years since 1938 were substantially above the base year, the 1946 figure of 150.1 being about average. "The output of power rose considerably between 1938 and 1943 but the change in subsequent years was relatively unimportant," the report states.

The report contains a quantity of tables and charts showing production statistics by industry and by area.

Bargaining by fire- fighters and policemen in Ontario

The Ontario Fire Departments Act, as amended in 1947 and again in 1948, contains provision for collective bargaining and compulsory arbitration of disputes.

Where a municipality employs a full-time, paid, permanent fire department, the municipal council must, when requested in writing by a majority of the fire department, bargain in good faith with a committee of the members to determine wages and working conditions. Where not less than half the fire department belong to a trade union, the request for negotiation must be made by the union, and, the bargaining committee may, at all meetings with the municipal council or any committee of the council for the purpose of bargaining, be accompanied, in an advisory capacity, by one member of a provincial or an international body with which the trade union is affiliated. In all cases, the members of the bargaining committee must be members of the fire department.

Where the municipal council or the bargaining committee is satisfied that an agreement cannot be reached, it may, by written notice to the other party, require matters in dispute to be referred to an arbitration board of three members, the council and the committee appointing one member each, the third, who is to be chairman, being appointed by the other two. If either party fails to appoint a member within a reasonable time, the Attorney-General, on written request of the other party, may appoint the member. If the two parties fail, within five days of the last appointment, to agree on a chairman, the Attorney-General may make the appointment. Each party is to assume its

own costs and share equally the costs of the third arbitrator.

Every agreement made under these provisions and every award of a majority of an arbitration board are binding upon the parties.

When a majority of the members of an arbitration board fail to agree, the chairman's decision is to be deemed the decision of the board.

Provision is made for municipal expenditures in connection with an agreement or an award of an arbitration board. An agreement or award is to take effect on the first day of the fiscal period in which provision for such expenditures is made in the estimates of the municipal council unless another date is named in the agreement or award. Where an earlier date is named, any provisions involving expenses are to have effect from the first day of such fiscal period.

Where a municipal council fails to bargain in good faith with a bargaining committee, on the written request of a majority of a fire-department or of its organization, the Lieutenant-Governor in Council may withhold any grant payable to the municipality out of provincial funds. When the municipal council provides for the making of the expenditures involved, the withholding order may be revoked, subject to any conditions deemed advisable.

The Police Act forbids a member of a municipal police force to be a member of a trade union or of any organization affiliated directly or indirectly with a trade union. Members of the force may, however, belong to an "association" which is defined as having among its objects the improvement of conditions of service or remuneration of the members of the police force and membership of which is limited to one police force.

Provisions governing collective bargaining and arbitration are generally similar to those under the Fire Departments Act, above, including the requirement that where not less than half the force belongs to an association the request for bargaining must be made by the association. There are, however, a few variations. Working conditions governed by regulations made under the Act are excluded from collective bargaining. Members of a bargaining committee must be members of the police force but, where the association is affiliated with any police organization, or not less than half of the force belong to any police organization, at all meetings, for the purpose of bargaining, held with the municipal council or with a committee of the council

or the board of commissioners of police, the bargaining committee may be accompanied in an advisory capacity by a member of such organization who is an active police officer.

In the case of failure to reach an agreement, an arbitration board is to be appointed only where the force has five or more members. Where there are less than five the matter may be referred to the Attorney General who is to conduct such inquiry as he considers necessary and report his findings to the parties. He may cause the report to be published in any manner which he considers advisable.

Canadian credit unions show marked progress

Originating in Germany in 1848, credit unions were first introduced in North America at Levis, Quebec, in 1900. Eight years later the first credit union in the United States was established in Manchester, N.H.

According to a recent report issued by the Economics Division of the Federal Department of Agriculture, there are over 12,000 of these co-operative banks (credit unions) in the United States and Canada. Until 1930, Canadian credit unions were found only in the Province of Quebec, but by 1939 they had been set up in each of the other provinces and enabling legislation had been enacted by all of the provincial legislatures.

Between 1939 and 1947 expansion was comparatively rapid. In the latter year, there were 2,546 credit unions in Canada—a three-fold increase in the eight-year period. Membership had increased by 623,725 to a total of 775,129 and the total value of assets had grown ten-fold to \$220,500,000.

The total value of shares held by members of 2,402 credit unions that reported in 1947 amounted to \$34,812,341 and members' deposits amounted to \$174,055,932. Shares increased in the preceding year by approximately \$7,000,000, and deposits by \$23,000,000. During 1947, total loans of \$80,210,032 were made, representing an increase of \$16,700,000 over 1946. Total savings increased in 1947 by \$69,700,000—fifty per cent greater than in 1945. The increases were most marked in British Columbia and Manitoba, being over 100 per cent in both of these provinces.

The average membership per credit union in Canada was 323 in 1947, as compared with 272 in 1945 and the average savings per member was \$269.46 in 1947, an increase of \$34.02 over 1945.

A recent development in credit union organization in Canada is the proposal to form a national co-operative credit society to act as a national credit union for the several provincial credit societies. It was decided at the Congress of the Co-operative Unions of Canada in March, 1948, that before such a national society could be organized each province should have a well-regulated and incorporated central credit union. Preliminary action has been taken to complete these organizations in two of the provinces, and when this has been accomplished it is expected that further discussion and study will be given to the problem of setting up a national body.

Each province now has at least one league or federation which groups the individual credit unions for mutual assistance in educational and advisory matters. They also assist managers in accounting and book-keeping, arrange for bonding of treasurers and the group purchase of supplies.

First aid training in Labour Department

First aid training was introduced recently in the Department of Labour. To stimulate interest in the work, the Hon. Humphrey Mitchell, Minister of Labour, and Mr. Arthur MacNamara, Deputy Minister, on November 30 presented certificates to the first ten graduates of the St. John Ambulance Association class. Mr. Mitchell and Mr. MacNamara also awarded prizes for the three best "first aiders" in the group, following a special test.

The St. John Ambulance Association currently has 25 classes of civil servants in session, with from 20 to 25 persons in a class. In the Labour Department the services of the Association were enlisted through the Staff Training Division of the Civil Service Commission and the Staff Training Officer of the Department, as a means of supplementing the work of the Civil Service Health Division, Department of National Health and Welfare.

Industrial Relations Conference at Dalhousie University*

The Maritime Bureau of Industrial Relations, sponsored by leading industries in the Maritimes in co-operation with Dalhousie University, held its tenth Conference at Halifax, Nova Scotia, on November 19, 1948.

D. R. Turnbull, Chairman of the Bureau's Board of Directors and General Manager

* Report prepared by John I. McVittie, Research Associate, Dalhousie University.

of Acadia Atlantic Sugar Refineries, Limited, Halifax, opened the morning session with a tribute to the late Dr. L. Richter, founder of the organization and its Executive Director until his recent tragic death. Hon. L. D. Currie, Nova Scotia's Minister of Labour, welcomed the members on behalf of the Provincial Government and assured them of his Department's interest in the furtherance of the Bureau's objectives.

Dr. Donald B. Marsh, economist for the Royal Bank of Canada, Montreal, addressed the Conference on Canada's economic outlook. He warned that easy comparisons between the 1920's and today's post-war boom must not be pushed too far. Present Government policies on re-direction of Canada's foreign trade and on capital investment for industrial expansion were effecting long-term changes in the economy. Another factor to be considered in making a careful analysis of probable trends was the high expenditure on social security programs, which in some interpretations might be regarded as a floor under consumers' purchasing power.

Dr. H. L. Keenleyside, Deputy Minister of Mines and Resources, Ottawa, spoke on immigration policies. Entry into Canada was a privilege, he said, not a right. The present policy on admissions, which represented a marked change in both official and popular attitudes from the pre-war period, was based on considered estimates of the country's absorptive capacity; the requirements of industry and agriculture were not being allowed to force a shift in the basic character of Canada's population. The first country outside Europe to accept displaced persons, he emphasized, was Canada; over 46,000 had been admitted so far, more than the total for all other non-European countries combined. About 105,000 immigrants, including regular applicants, relatives and DP's were expected in 1948.

Professor V. W. Bladen, Director of the Institute of Industrial Relations, University of Toronto, was speaker at the luncheon meeting, with R. D. King, Superintendent of Imperial Oil Limited, as chairman. Professor Bladen described the studies on human relations in industry initiated by the Toronto Institute in co-operation with Ontario companies. He declared that the answers to personnel problems could not be found easily. Interviews and discussions in every department of a plant, with supervisory and operative staffs, were required to bring results of value to both labour and management.

J. H. M. Jones, of the Mersey Paper Company, Limited, Liverpool, Nova Scotia,

was chairman for the afternoon session. F. M. Covert, K.C., of Halifax, outlined the administration of Nova Scotia's trade union legislation. He asserted that the original Provincial Act of 1937 was the first in any province to recognize the collective bargaining rights of employees. (British Columbia enacted similar legislation in the same year.) Industry should realize the values in modern methods in public and employee relations and take steps to present its case more effectively. Unions were here to stay, he said, and might now be expected to assume a greater measure of social responsibility as their importance in Canada's industrial structure was recognized.

L. Christie, Atlantic Regional Director of Personnel Relations for General Foods Corporation, New York, spoke on principles and policies in personnel administration. He recommended his company's plan of publishing its basic principles on personnel matters for the information and guidance of supervisory staff and employees. General Foods Corporation, he reported, had found this an effective means of selling the organization's objectives and of promoting teamwork in the tackling of mutual problems.

At the dinner meeting in the evening, Dr. Basil Layton of the Department of National Health and Welfare, Ottawa, outlined the recently announced National Health Grants program. In co-operation with the Provinces, the Dominion, he said, hoped to promote the construction of additional hospital facilities and the training of specialists in various branches of public health. Financial assistance for health surveys, specialized diagnostic and treatment services, and for extension of work in preventive medicine, was being made available on an unprecedented scale. The proposed federal outlay of \$30,000,000, he pointed out, should be offset against the huge bill which the nation now pays indirectly for illness through lost time at work, individual suffering, and family inconvenience and hardship. The new program should also be regarded as a most important step towards solution of Canada's critical shortage of hospital facilities for both acute and chronic patients.

Sound hazards in industrial plants

In a recent issue of *Industrial Health Bulletin*, published by the Department of National Health and Welfare, it is asserted that excessive noise in industrial plants "must be considered as much an occupational hazard as harmful gases, dusts and other toxic substances."

Like any other occupational hazard, noise is both a cost to industry and a detriment to the health of employees, even if it is not consciously recognized. The well-being and efficiency of workers may be seriously undermined in factories where the noise levels prevent ready communication between neighbouring workers. It is pointed out that such an environment "will be aggravated by the worker's feeling of isolation which may even extend to one of mild claustrophobia." Further, "the 'quality' of noise is also an important factor in determining its effect on the ear." Sounds of a higher frequency are more distracting and harmful than those of a lower frequency, and the elimination of a dominating high-pitched sound in a noisy workroom can result in a marked improvement.

Another important factor is "the difference between noise of one's own making and the 'other fellow's noise.'" A worker is usually more disturbed by noises coming from machines and operations other than his own and over which he has no control, particularly when noises come from sources at a distance from the hearer. For example, "most people in a quiet room will be affected by even a low level noise, such as a typewriter in an adjacent room. It is low compared with many industrial noises, but its noise level is relatively high compared to the quiet of one's own room."

The first step in the control of noise is to reduce its output at its source. The construction of quieter machines, the usual source of factory noise, is a problem of machine design. In the case of machines already installed and in operation proper maintenance and adjustment will do much to cut down unnecessary noise. "These measures include (a) replacing worn parts; (b) using well-balanced parts; (c) keeping moving parts well oiled; (d) having direct or belt drives in place of open gears, or where conversion is impractical, using non-metallic gears."

It is pointed out that improper machine mountings account for a great deal of industrial noise. "It is not uncommon to find heavy, rapidly-operated machines bolted directly to wood or concrete floors," thus transforming the floors into huge sounding boards that amplify the sound and spread it throughout the whole building. To prevent this, "highly efficient machine mountings may be obtained for practically every type of machine in common use."

Noisy machines or operations can often be isolated by grouping them in sound insulated enclosures, located at a distance

from the general work area. The use of sound absorbing materials in walls, ceilings and floors are also recommended not only to reduce noise, but to improve the character of the noise, since the high frequency sounds are absorbed more readily than those of lower frequency.

Old age and blind pensioners in Canada

The number of persons receiving old age pensions in Canada increased from 235,947 as at June 30, 1948, to 241,032 as at September 30, 1948.

The Dominion's contributions under the Dominion-Provincial scheme totalled \$15,868,086 for the quarter ended September 30, 1948, as compared with \$15,667,276 for the preceding quarter. Since the inception of the Act the Dominion has contributed \$512,390,003.

The average monthly pension in seven provinces ranged between \$29 and \$30. In the other two provinces it was \$26.15 and \$28.95. In only one province was the number of pensioners as high as 3 per cent of the total population.

Pensions were being paid to 9,140 blind persons as at September 30, 1948, as compared with 8,842 as at June 30, 1948.

The cost of pensions in respect of blindness to the Dominion was \$627,921 for the quarter as compared with \$614,624 for the preceding quarter. Since the inception of the Act, Dominion payments have totalled \$14,198,604. The average monthly pension as at September 30, 1948, was between \$29.50 and \$30 in six provinces. In only one province was the average below \$29. Pensioners numbered less than one-tenth of one per cent of the total population in most provinces.

British TUC to embark on productivity campaign

The General Council of the British Trades Union Congress has recently taken the initiative in attempting to raise labour productivity in British industry by a series of specific proposals. In

that some of the proposals may be unpopular with workers, the action of the union leaders is described by the *Manchester Guardian* as "brave" and as "a revolutionary attempt by the TUC to break away from a hundred years of trade union history and to persuade the movement to start thinking in new terms."

The proposals were made in response to repeated appeals by the British Labour Government for increased production in the interests of national economic survival.

Trade union leadership had endorsed these appeals in principle; but on November 8 a firmer stand was taken when the General Council issued a report which makes recommendations on how to "grapple with the fundamental difficulties in a practical way."

The problem is presented under three main heads:—

1. To make sure that the facts of the economic situation are really understood by men and women in the factories;

2. To provide training for trade union officers for their responsibilities in joint consultation, etc.;

3. To take direct action to deal with the technical problems of increasing productivity.

The report emphasizes that "no real improvements can accrue without the full co-operation of the workers concerned;" and that the best chance of getting things done is to let the people who have to do them think them out for themselves.

"General publicity" is termed "ineffective," and a more practical approach is considered to be the convening of special conferences of all the trade union federations to discuss the particular problems in each industry.

Points which may arise at these conferences include: focusing attention on shortages and bottlenecks, organizing national or local industrial conferences to be addressed by research scientists and efficiency experts, accelerating the formation of joint production committees, reviewing the system of workplace representatives and seeking to raise their efficiency by Training within Industry courses or by other means, taking advantage of existing courses in management and technical subjects, consulting the editors of trade union journals on the publication of relevant material, and dealing with production questions at the conferences of full-time trade union officials in each region.

Dealing with the need for transfers of labour, the Council's report recognizes that there are over-manned industries which could lose labour to under-manned industries to the general benefit, and that the solution "may possibly mean the transfer of membership and the adoption of measures which may not be universally popular." It refers to the waste of manpower caused by the excessive turnover of labour—in many industries at the rate of 50 per cent a year—and urges on unions "the necessity for examining the conditions in which an excessive turnover of labour exists."

On the question of restrictive practices, the General Council points out that both sides of industry are concerned. It recognizes that problems of the demarcation of jobs between trades create difficulties in efficient working and suggests that they should be examined in the light of full employment.

Joint production committees, the report says, are not being formed with enthusiasm over wide sections of industry, partly because of the hostility of some employers, partly because of indifference, or even opposition, by some workers. Union executives are asked to examine the extent to which such committees are operating in their industry and the difficulties preventing their wider adoption.

Unions endorse productivity proposals

The report of the TUC General Council on productivity, referred to above, was endorsed by a special conference attended by some 1,350 representatives of affiliated unions.

At the conference, held on November 17, Mr. Vincent Tewson, TUC general secretary, who introduced the General Council's report, emphasized that the objective must be to eliminate waste of all kinds and that the same manpower, with existing plant, had to be used to produce more at less cost. The crux of the question was how to make available on the floor of the workshop the facts which had convinced the General Council of the vital importance of productivity and to encourage the means whereby it could be accomplished. If their proposals were to mean anything at all they involved getting down to brass tacks with their union members and with the workers in the individual plants and establishments.

It was necessary to bring forward any positive evidence which showed that an uneconomic use was being made of available manpower, to get to the specific cause in each establishment where manpower was excessive, to make a sound and practical examination of where, and with what effect, so-called restrictive practices operated. It was not enough to retort that restrictive policies were practised by owners and management too.

One of the few speakers to express doubts of the General Council's policy, Mr. McDougall of the Amalgamated Union of Foundry Workers, said that it was based on the assumption of the continuity of full employment, but few workers believed there could be permanent full employment under

present conditions, and would therefore hesitate to respond to the call for greater production.

Sir Edward Appleton, secretary of the Department of Scientific and Industrial Research, addressed the conference on what scientists were doing to increase industrial production. He pointed out that much trouble in the past had been brought about by "job evaluation" based on insufficient and doubtful data, and that this could be overcome by making use of really scientific techniques in the study of work adjustment, incentive schemes, and technical innovations of all kinds.

Coal union withdraws from plan to fine absentees

Supporting a Government appeal for increased coal production to meet Britain's target for 1948, the National Union of Mineworkers agreed to a procedure whereby persistent pit absentees would be subject to fines imposed by joint labour-management attendance committees, to be set up at the pits. However, when the plan met with persistent opposition in various coalfields, the Executive of the Union held a meeting, and decided that the plan was unworkable. It informed the National Coal Board of its view that discipline was a function of management, and that elected trade union representatives could not be expected to decide punishments for the men they represented.

The plan had been developed at a special meeting of mine leaders and the National Coal Board, called by the Minister of Fuel in October, at which a joint committee was set up to consider immediate measures for increasing coal production. The committee recommended the revision of "certain long-standing rules and practices" so that trained men could be up-graded more quickly for work at the coal face; the withdrawal of objections to foreign labour by certain branches of the union; better attendance for overtime shifts; acceptance of those agreed increases of existing tasks or "stints" which were a condition of the 5-day week; and the appointment of local joint committees with power to fine persistent absentees up to £2, or to take "such other disciplinary action as they may think fit." Any fines imposed were to be returnable if the man concerned worked for the next 12 weeks without missing a shift.

Following the failure of various areas to support the plan, and the subsequent meeting of the Union Executive, Mr. Will

Lawther, President of the Union, stated that reports from the areas made it clear that while the men in general would agree to the other recommendations of the committee, they did not think it right that their own union representatives should be asked to punish union members. The men thought it fair enough that persistent absentees should be punished, or, in bad cases, dismissed, but they did not want their elected representatives to have any part in doing the punishing.

Commenting on the Union's decision that discipline was a function of management, the *Manchester Guardian* said:—

"Today's decision may have a considerable effect on trade-union thinking about the control of nationalized industries. Although the policy of the TUC is that trade unions should be independent of any direct share in the management of nationalized industry, there is a fairly large minority which holds that the workers, through their unions, ought to have a direct say in the control of the industries they serve.

"The National Union of Mineworkers is the most powerful union in any industry so far nationalized, and if it wished to demand a direct part in management the Government might find it hard to refuse. But it has not demanded it, and the suggestion that the Union should have any share in the managerial side of discipline has now been emphatically rejected."

Meeting of Anglo- American Council on Productivity

The Anglo-American Joint Council on Productivity, which consists of labour and management representatives from the United States and Britain, met in October and visited a number of industries. The Committee is studying methods of increasing British industrial productivity. It was set up under the auspices of the European Recovery Program.

Its next meeting is expected to be held in the United States in the spring. In the meanwhile, according to a report issued by the Council, a number of committees have been set up, one of which is to arrange visits from British factories to factories in the United States. This is only one part of a general recommendation that the best industrial practice should be more generally shared; another is that "knowledge of the best practice in the United Kingdom itself" should be made more generally available, and this is left to British industry to arrange.

Another committee will study the level of productive plant and power in British industry, and will inquire whether the level is relatively increasing or declining. The Council's report points out that the amount of energy available per employee is one of the main determinants of productivity, and that this ratio in the United States is about twice that in Britain. A third committee will try to establish a basis of productivity measurement to permit comparisons of British and American experience. A fourth committee will report on the possibilities of specialized production of components, and a fifth will tackle the task of getting economic problems, as they relate to productivity, more widely understood.

**British
TUC calls
for action
against
Communists**

The General Council of the British Trades Union Congress on October 27, denounced "the malignant character of Communist agitation and organization", and called on affiliated unions to counteract every manifestation of Communist influence. The Council further recommended that the World Federation of Trade Unions should suspend its activities, failing which "withdrawal of the TUC must follow."

The anti-Communist appeal was carried by the Council with two or three dissentients, and was sent to the executives of all affiliated unions. The motion was cast in the form of an appeal since the affiliated unions of the TUC are autonomous and determine their own policy.

The statement says that the Council has received evidence that Communist influences are seeking deliberately to obstruct the economic policy approved at the 1948 Congress; and that "the Communist Party leadership has declared that opposition to Congress decisions will be carried back from the floor of Congress to the work-shops and every effort made to incite trade unionists against the decisions taken in their name."

(At the Congress the decision had been taken to support the Government's stabilization policy in regard to wages, prices and profits.)

The General Council statement continued:—

"The attitude of the British Communists is in full conformity with that of Communist organizations in other countries, notably in France. The industrial conflict now raging there clearly demonstrates the outcome of this policy.

"These disruptive activities are being carried on by the Communist Party and its subsidiary organizations in servile obedience to decisions made by the body calling itself the Cominform.

"Statements made officially by spokesmen of the Communist Party in Britain prove beyond question that sabotage of the European Recovery Program is its present aim.

"Communist influences are everywhere at work to frame industrial demands for purposes of political agitation, to magnify industrial grievances and to bring about stoppages in industry. . . .

"The General Council therefore directs the serious attention of all trade unionists to the malignant character of Communist agitation and organization. They urge the executives of all affiliated unions, their district and branch committees, and responsible officers and loyal members, to counteract every manifestation of Communist influences within their unions, and to open the eyes of all workpeople to the dangerous subversive activities.

"Energetic steps must be taken to stop these evil machinations. Attempts to wreck economic recovery in the interests of a foreign power whose policy is to keep the world divided, impoverished, and in constant dread of a third world war must be condemned and repudiated by all trade unionists."

On November 25, the General Council carried its campaign a stage further when it called on all unions not merely to oppose the Communist line but to see that all known Communists and Communist sympathizers are barred from holding office within the unions.

**British TUC
recommends
suspension
of WFTU
activities**

A policy which may lead to the withdrawal of the British Trades Union Congress from the World Federation of Trade Unions was announced by the TUC General Council on October 27, after a meeting of the Executive Bureau of the WFTU in Paris.

The TUC representatives to the Federation meeting reported to the General Council that it was becoming more and more difficult to prevent the intrusion of political tactics into questions of trade union policy. It was concluded that co-operation between the international trade secretaries and the World Federation was impracticable and that their present support of the WFTU could not be continued.

The General Council therefore put forward a four-point recommendation:—

That the WFTU should suspend its functions;

That agreement should be sought between the organizations which have met their constitutional financial commitments as to the precise terms on which the suspension should apply;

That trustees should be appointed, consisting of one representative from each of the five main contributing national centres, to hold the accumulated funds of the Federation and meet in 12 months or earlier to discuss the conditions in which an attempt to revive an international trade union body may be made;

That in the event of the WFTU refusing to agree to the suspension of its activities a withdrawal of the TUC must follow.

In Canada, the Canadian Congress of Labour is the only labour organization at present affiliated with the WFTU. A report to the last CCL Convention by Secretary-Treasurer Pat Conroy, indicated concern at the political character of the WFTU (L.G., Dec., 1948, p. 1356).

Changes in British factories protective legislation

The provisions of the Factories Act, 1948, which amends the Factories Act of 1937 with respect to medical supervision of young persons, suitability of factory premises, and other matters, came into force on October 1, 1948. Provisions for seats for workers are not to take effect until October 1, 1950.

The medical examination of young workers employed in factories required under the 1937 Act will no longer be limited to those under 16 years of age. Under the new Act, this provision will apply to all young workers in factories under 18, and its scope has been extended to cover two additional classes of employment outside factories. These are building and engineering construction, and repairing, refitting, painting, loading, unloading, coaling and certain other jobs on ships in harbour or wet dock, as well as employment in shipbuilding yards. The raising of the age below which the provision applies to 18 years and the extension of its scope to cover these two additional classes of employment is a step towards implementation of an International Labour Convention of 1946 (No. 77) on this subject.

Unless certified as fit for employment by a doctor appointed by the Factory Department, a young person may not remain in his employment for more than 14 days, the prescribed period set by an Order of September 22, 1948. This requirement does not affect young persons over 16 already employed in a factory on October 1, so long as they remain in the same employment. All young workers are to be re-examined at least once a year.

Under the Act of 1937, the Minister of Labour may order arrangements for medical supervision if he suspects that certain specified conditions, such as changes in a process or the use of a new substance in a process, may endanger the health of persons employed. The Act now extends this power to cover the arrival of a consignment of material thought to be infected or some change in conditions of work other than a change in the actual process.

The power of courts of summary jurisdiction to deal with factories that are dangerous is widened to enable them to make orders for stopping or preventing the use of a factory of premises which are unsuitable from the point of view of the safety, health or welfare of the persons employed. One month's *previous* notice of intention to use any premises as a factory or to use mechanical power for the first time is required instead of the former rule that notice must be given within a month *after* starting. The notice which must be sent to the factory inspector for the district must indicate the nature of the work and the nature of the mechanical power used.

The Minister's power to make special health or safety regulations now includes power to make regulations not only as to dangerous manufacturing processes or plant but also as to dangerous equipment, such as fire extinguishing equipment.

On premises where part of the building is used for factory purposes the owners have, under the new Act, additional safety obligations respecting lifting machines, lifting tackle, steam plant and air receivers not belonging to the factory occupiers and situated in parts of the building outside the actual factory but used for factory purposes.

Seats which previously had to be provided for female workers are now to be provided for all employees. The Act stipulates that suitable seats should be available to enable workers to take advantage of opportunities for sitting which may occur in the course of their employment without detriment to their work, and, where a substantial proportion of the work

can properly be done seated, workers are to be provided with seats and foot-rests.

Other sections permit the employment of women and young persons over 16 on Sunday on work that has to be done without delay in connection with the preservation of fish, fruit, and vegetables. Exemptions have already been provided for this purpose, in the case of women and young persons over 16, from the provisions regarding hours and work on statutory holidays. Other amendments deal with precautions required to be taken where, in a factory, people have to enter tanks, pits, pipes or other confined spaces in which they may be overcome by fumes or lack of proper air.

Prevention of accidents to young workers

In the belief that the continued high accident rate to young persons can be reduced if careful attention is given to supervision, training and instruction, particularly during the early years of employment, the U.K. Factory and Welfare Advisory Board has issued a leaflet entitled *The Prevention of Accidents to Young Workers*, a revision of one issued in 1938. New developments of training departments within works and courses at technical schools at which safety instruction can be given, are noted. The leaflet has been distributed to the principal employers' organizations and trade unions in England.

Principles for insurance coverage of industrial diseases in U.K.

A new set of principles for selecting diseases for insurance in Britain under the National Insurance (Industrial Injuries) Act, 1946, have been suggested by a committee appointed by the Minister of National Insurance.

The committee was composed of representatives of the medical profession, employers and employees, under the chairmanship of Judge Edgar T. Dale.

The proposals would supersede the tests applied since 1906 in deciding what additions should be made to the scheduled diseases under the Workmen's Compensation Acts.

One of the tests hitherto applied was whether the disease was specific to employment. The committee recognizes that before a disease can be selected for insurance it must be one that can normally be attributed to the nature of employment with "reasonable certainty." Within that definition the committee reaches one of its

principal conclusions—namely, that "the primary consideration in selecting a disease for insurance should be whether it is specific to an occupation, or if it is not specific, whether the occupation causes special exposure to risk of the disease, inherent in the conditions under which the occupation is carried on."

The report observes that incidence alone is not a conclusive test of the risk of a disease. The risk in a particular occupation may be considerable, but the actual incidence low because of the precautions taken to counteract that risk. On the other hand, a high incidence may be due to entirely irrelevant factors, such as housing conditions in a particular locality.

The committee attributes a wide meaning to the word "disease," defining it as "any departure from health capable of identification by its signs and symptoms." This would preclude ruling out an abnormal condition merely on the ground that it was not a disease. It also embraces injury caused by accident, although the committee does not suggest that where an injury can be dealt with as being caused by an accident it should be prescribed as a disease, except in cases where it can be more adequately or appropriately dealt with as a disease.

Beveridge Report on Voluntary Action

Means by which voluntary agencies can continue to work with the State to improve social conditions are discussed by Lord

Beveridge in a report published in England in October entitled *Voluntary Action: a Report of Methods of Social Advance*.

The report is the third in a trilogy. The first Beveridge Report, issued in 1942, dealt with social security, and formed a basis for the comprehensive social insurance legislation now in force in the United Kingdom. The second report, entitled *Full Employment in a Free Society*, was published in 1944. Both these were largely concerned with the actions of the State.

The essence of the present report, according to the author, "lies in showing, first, how much individual unhappiness remains untouched by social security and full employment; secondly, how much has been done to diminish unhappiness in the past by voluntary action, inspired by the motives of mutual aid and of philanthropy, or both in combination; thirdly, how urgently voluntary action will be needed in future, to supplement and to go ahead of public action, to do things which the State cannot

do or should not do, or is unlikely to do, as well as they will be done by a specialist self-devoted pioneer seeing this or that particular evil and setting himself to destroy it."

"The State cannot see to the rendering of all the services that are needed to make a good society," writes Lord Beveridge. "...The reasons for it (voluntary action) have not been diminished and will not be destroyed by the growing activities of the State."

The main field for voluntary action has shifted, Lord Beveridge finds, from financial to personal service. A century or so ago destitution was the threat which overshadowed the lives of the workers. The great (though not the only) object of voluntary action was to stave it off in the only way it could be staved off, with money. Members of friendly societies undertook to help each other financially in misfortune; philanthropic bodies helped those who had failed, or been unable to avail themselves of the defences of mutual aid. Today this threat, long shrinking before the advance of social insurance, has almost disappeared.

While the economy of the country holds out there is only comparative poverty to fear. But the receding tide of poverty has uncovered other sources of misery, which are not primarily due to lack of money and to which a purely financial answer is not found. Lord Beveridge lists some of the sufferers: there are the aged, an increasing section of the population; children who, for one reason or another, lack the normal background of home life; men and women disabled in various ways. What these need beyond financial assistance is personal attention, friendly care, the extra trouble and consideration needed to offset their handicaps; gifts of the spirit which money does not buy.

The report outlines the following program for the State in relation to voluntary action: co-operation of public authorities and voluntary agencies; a Friendly Societies Act; a Royal Commission on charitable trusts; re-examination of taxation of voluntary agencies; an inquiry into conditions of the physically handicapped; a Minister-guardian of voluntary action; specialized staff training; and the continuance and extension of public grants to voluntary agencies. The first and the last two represent policies already accepted; the others represent new departures though on established lines.

Duration of unemployment among British workers

Out of a total working population of over 20,000,000 in Great Britain in mid-September, 1948, about 285,000 persons were registered as wholly unemployed, according to the *British Ministry of Labour Gazette*. Of these, 217,000 were male and 68,108 female.

Of the men, 37 per cent had been unemployed for not more than four weeks, while the number who had been continuously unemployed for more than 12 months accounted for 17 per cent of the total. Among women the corresponding proportions were 58 per cent and 6 per cent.

A further examination of the duration of unemployment shows that 59 per cent of the males and 78 per cent of the females who had been wholly unemployed at mid-June had found work or ceased to register within the next three months. The figures indicate that male workers under 18 years are more readily absorbed into new employment than the older men. In the case of females, this tendency is not so marked.

Progress of "net spendable earnings" in U.S.A.

The Bureau of Labour Statistics of the United States Department of Labour issues information each month concerning the trend of average weekly earnings of production workers in manufacturing.

The Bureau also adjusts these figures to take account of income and social security taxes and the cost of living. In this way the Bureau obtains a series which it describes as "net spendable earnings."

Since taxes vary with the number of dependents, the Bureau issues two series of figures, one applicable to workers with no dependents and the other to workers with three dependents.

According to the Bureau, gross average weekly earnings for all production workers in manufacturing rose from \$23.86 in 1939 to a wartime peak of \$46.08 in 1944. They declined to a \$43.74 average in 1946, and had risen to \$54.12 by August, 1948.

For a worker with no dependents, tax deductions averaged only 28 cents in 1939, so that his average weekly "net spendable earnings" in that year were \$23.58. In 1944, deductions were \$7.79, and his net spendable earnings were \$38.29. Expressed in terms of 1939 dollars, however (i.e. adjusted for the rise in the cost of living), earnings were \$30.32.

Alternatively stated, the average earnings available for spending of the factory worker

with no dependents in 1944 were \$38.29; that amount, however, could purchase approximately those goods and services in 1944 for which \$30.32 could have been used in 1939.

In 1946, his net spendable earnings averaged \$37.65 in current dollars and \$26.87 in 1939 dollars. In August, 1948, the figures were \$47.41 and \$27.01 respectively.

For a worker with three dependents, net spendable earnings in current dollars rose from \$23.62 in 1939 to \$44.06 in 1944; declined to \$43.13 in 1946, and rose to \$53.15 in August, 1948. The corresponding figures in 1939 dollars were \$23.62, \$34.89, \$30.78 and \$30.28.

The Bureau states that "net spendable weekly earnings in 1939 dollars" represent an approximate measure of changes in "real" net spendable weekly earnings.

Role of American labour press

The proceedings of a conference of labour journal editors, held in April, 1948, under the auspices of the Institute of Labour and Industrial Relations and the School of Journalism of the University of Chicago, have been issued in mimeographed form.

One of the speakers, Lewis M. Herrmann, Secretary-Treasurer of the International Labour Press of America, is quoted as stating that "there are 322 publications of all types affiliated with the AFL. Of these, 81 are international journals, while 241 are state and local papers. About two-thirds are members of the International Labour Press of America.

"The CIO has a total of 134 publications. Thirty-eight are international journals, and 96 state and local papers. Only about half of these publications accept advertising.

"The labour press has available several news and feature services of national scope. . . . The largest circulation weekly labour paper is sponsored by the Railroad Brotherhoods, called *Labour*, with a circulation of about 1,000,000. The AFL has also been sending a news clip-sheet, in the Spanish language, to countries of South America in order to bring about friendly relations."

Speaking of the role of the labour press, Mr. Herrmann asserts: "Invariably, labour papers have blazed the trail for every progressive achievement recorded by unionism, in the realm of social legislation, free public education, protection against child labour, minimum wage standards, and in the battle against racial and religious discrimination. Years before the advent of the 8-hour day, labour journals fired the imagination of

America's working men with the hopes for more leisure time. Without the inspiration of the labour press and its loyal support, unionism in this country would have been inarticulate, and its remarkable progress impossible."

He adds that the labour press has been instrumental in "trying to bring peace between the AFL and CIO," and also in "bringing about more amicable relations between labour and management."

U.S. firm offers free hospital service to pensioners

The U.S. General Electric Company has announced the inauguration of an experimental insurance plan to provide free hospitalization for eligible retiring employees. Effective as of September 15, the program will apply to employees who retire on or after that date and have ten or more years of continuous service at the time of their retirement. Costs will be borne by a trust fund, known as the GE Pensioners Hospitalization Plan and Trust, which starts with assets of nearly \$6 million.

Price and rationing controls in Australia

Following a referendum held on May 29, 1948, when the electors rejected (by half a million votes) the proposal to give power to the Commonwealth Parliament to legislate on prices and rents, the Australian Government decided to relinquish controls which had been exercised by virtue of the Defence powers, and thus leave the way open to the different State Parliaments to legislate on these matters.

In a letter to the State Premiers, the Prime Minister offered administrative assistance in setting up their own system of controls, and stated that his Government would view "with grave concern" any possibility that controls would not be continued in the interest of economic stability.

"Even with Commonwealth controls in operation, costs and prices have been rising strongly in the Australian economy for some time past. Many important commodities are still scarce in relation to demand."

With regard to subsidies and rationing, the Prime Minister indicated that although their administration would become increasingly complex without centralized control of prices, nevertheless they would be continued on some commodities, while being removed on many others.

A conference of State Premiers was held at Canberra in June, at which it was agreed that it was "vital that an effective system

of price control be continued;" that there should be collaboration and uniformity in the administration of the program; that specific controls should be eliminated wherever possible; and that a continuing co-ordinating committee should be established of the six State ministers concerned, to "consider and recommend to the respective governments those goods and services from which controls should be removed immediately and from time to time thereafter," and generally to advise on policy.

A Canadian Press despatch of October 6 comments that "the States have been fighting a losing battle with rising prices since the Federal Government handed over controls," and adds: "State ministers in charge of price control claim they are doing all in their power to keep prices down but complain that withdrawal of federal subsidies on essential goods such as wool, textiles, raw cotton and potatoes, coupled with the increasing wage rate made it almost impossible."

**Inquiry into
trade union
affairs and
labour laws in
South Africa**

The Minister of Labour for the Union of South Africa announced in October the appointment of a commission of inquiry into industrial legislation.

Among the matters which the commission is to study are the desirability or otherwise of:—

machinery to co-ordinate wages and other employment conditions, with "due regard to the interests of the State and the general public and the legitimate interests and claims of employers, employees and industries";
the compulsory determination of all industrial disputes;
introducing "special steps to protect employers or employees against any hardship" arising from the operation of "closed shop" provisions;
"more adequate powers of control" of the conduct by trade unions and employers' organizations of their affairs (including finances) and their elections;
having separate trade unions and employers' organizations for Europeans, Coloured and Asiatics;
machinery to "prevent and settle" disputes involving Natives.

The commission is to hear representations and take evidence.

**Girl
workers in
Japanese
textile mills**

An article in the November issue of *Labour Information Bulletin*, issued by the United States Department of Labour, states that under the Allied occupation the peonage system in Japanese textile mills has been ended.

Before the war, the article says, labour in the textile industry "was kept in a state of servitude characteristic of the old feudal system. By far the greater portion of this labour force was made up of young girls 11 to 20 years old who lived in dormitories within the factory grounds surrounded by high walls. They were rarely permitted outside these walls and then only when accompanied by a factory official. Every aspect of their lives was controlled by the factory management in a manner carefully planned to keep the girls docile and to shield them from ideas which might lead them to seek more advantageous employment elsewhere or to insist upon better wages, working conditions, and greater personal freedom.

"According to the old system, factories paid independent recruiting agents to hire the required number of girls by capitalizing on the periodic financial distress of farmers. A farmer was loaned money to pay off some of his debts on the condition that he send his daughters to work in the textile factory until the debt was repaid. The farmers signed a contract with the agent for the services of the girls for a year. The girls earned so little at this work and the farmers were so continually in need of borrowing money that the textile factory usually managed to keep the father in debt for several years, thus forcing him to renew the contract until his daughter reached a marriageable age of about 20 to 23 years.

"Since the end of hostilities, the Japanese Government, under the guidance of the occupation officials, has enacted two laws to protect workers against these pressures. The labour-standards law included three measures to remove the abuses of this system. First, no two people are allowed to sign a contract for a third person, making it impossible for a parent to contract for the services of his children. Second, employers are prohibited from advancing money to employees, so that families no longer have any legal obligations to a factory or agent. Third, the age at which girls may accept full-time work in industry is raised to 15 (or 14 if 9 years of compulsory schooling were completed earlier), at which time the girls should be in a better position to look after their own interests.

"The labour-standards law also limited the total number of hours to be worked, prohibited night work for women, established minimum standards for space and sanitation and gave the girls living in

dormitories the right of self-government and the right to leave factory premises at will.

"Further curative action was provided in the employment-security law, which gave the Labour Ministry the power of controlling the recruiting activities of agents by requiring that all agents be licensed by the Labour Ministry, and that all agents be regular employees of the companies for which they work. Prefectural and local employment security offices were given the responsibility of supervising the work of these agents."

THE LABOUR MONTH IN BRIEF

(Continued from page 3)

surplus is known to exist. Lastly the order may be cleared to the recently opened employment office in London, England.

The number of persons transferred out of employment offices, as depicted in the chart on page 3, indicates the extent of effective clearance operations at employment offices. The very distinct seasonal pattern illustrates the prominence of the seasonal movements of farm workers. The peak in clearance operations attained in 1947 was in part a reflection of the general instability of the labour force although it also reflected the sponsored movement of Maritime workers into Quebec and Ontario industry. Aside from these movements, however, it will be noted that even during the seasonal lull in employment conditions, transfers out of employment offices never dropped below 200 per week.

Industrial Relations

Time loss due to work stoppages arising out of industrial disputes in Canada during November was the lowest recorded for any month since February, 1946. Only 16,000 days were lost, according to preliminary estimates, as compared with 87,223 in October.

Of the 20 strikes which were in existence for varying periods during the month, only 7 were still in effect by December 1.

A strike of strip coal miners in the Bienfait-Estevan field, Saskatchewan, involving 200 workers, accounted for 4,000 days, or 25 per cent of the total time lost. This strike began on November 3 and was unteminated at the end of the month.

Within the field of federal jurisdiction, interest centered on the deepsea shipping and longshore industries. A number of agreements covering officers on deepsea ships were reached in November but

Enforcement machinery is "gradually shifting into gear," according to the article, and "certain less direct but equally important social forces are pushing in the same direction." These include agrarian reforms to lessen the financial burden on farmers, so that they will "have no need to encourage their daughters to leave home to work for low wages," raising of the compulsory school level from six to nine grades; institution of vocational counselling in the schools; and development of trade union organization.

the dispute affecting unlicensed seamen remained critical.

Cost of living

The Dominion Bureau of Statistics cost-of-living index fell from 159·6 to 158·9 between November 1 and December 1, 1948. All group indexes except that for foods were either fractionally higher or unchanged, but an unusually sharp decrease occurred in the price of eggs and there were moderate reductions among meats, vegetables and fruits. This was the first decline of any consequence in the cost-of-living index since September, 1945. The food index dropped from 204·7 to 202·0 between November 1 and December 1. The rent index advanced from 121·0 to 121·7, representing the net change between September and December. During November, fuel and light moved from 129·0 to 129·1, and home furnishings and services from 166·0 to 166·2. The two other budget group indexes remained unchanged, clothing at 181·5 and miscellaneous items at 124·6.

Earnings

Statistics of earnings are not obtainable as promptly as those for the cost of living; but in the manufacturing industry average hourly earnings were continuing to rise up to the week of November 1, the most recent date for which figures are available. The growth in earnings, combined with the check in the cost-of-living index, brought about a rise in the index of "real" earnings in manufacturing. For the first time in 1948, this index rose above the 1947 level at October 1 (see chart), and at November 1 reached 105·2 (av. 1946=100).

Average hourly earnings in manufacturing were 93·4 cents in the week of September 1, 94·6 cents at October 1, and 95·4 cents at November 1.

EXTENT OF COLLECTIVE BARGAINING BETWEEN UNIONS AND EMPLOYERS' ASSOCIATIONS OR GROUPS

Of all workers under collective agreements in Canada in 1946, some 26 per cent were covered by agreements with associations or other groups of employers. This type of agreement is commonly found in certain manufacturing industries and in certain primary industries, such as logging. In the Province of Quebec it is encouraged under the provisions of the Collective Agreement Act. If the number of workers covered by agreements extended by this Act are included in the total, the proportion of those under agreements with employers' associations or groups is increased to about 46 per cent.

This study, one of a series on collective agreements,¹ shows the industries in which collective bargaining between unions and associations of employers or groups of employers are in effect in Canada. It shows, by industry, the proportion that the number of employees under agreements with such associations and employer groups bears to the total under all agreements, and in addition discusses examples of this type of bargaining in several industries. It should be understood, however, that most collective agreements are not of this type but are those between a union and a single employer or the management of a single plant in a multiple plant firm.

An earlier study in this series dealt with the extent to which the wage-earners and salaried workers in Canada were covered by collective agreements in 1946 (L.G., March, 1948, p. 153). The present study outlines one particular type of bargaining, namely bargaining between unions and associations or groups of employers. It was found that about 26 per cent of the workers under collective agreements in 1946 were

under agreements between unions and associations or groups of employers.²

Since complete statistics on collective agreements for 1947 are not yet available, it was necessary to use 1946 data as a basis for constructing the tables. The 1947 data, however, are sufficiently complete to indicate that a study based on the more recent information would show no important difference in the incidence of this type of collective bargaining in the various industries.

The list of Canadian industries in tabular form is arranged to indicate the extent to which this special type of collective agreement prevails, and to point out whether the area covered by these agreements with employers' groups is local, regional or national. The basis of the tables is the percentage comparison in each industry between the number of workers covered by agreements signed with employers' associations or groups and the number covered by all collective agreements in the same industry. The table does not give any indication of the extent to which all employees in these industries are covered by agreements.

The criterion used in deciding whether an agreement should be included in the group collective agreements was the evidence of joint negotiation between two or more employers and a union. The most positive indication is the signature of an association or several employers on the collective agreement itself. In many cases there

¹ A file of collective agreements has been maintained in the Department of Labour for many years and summaries of representative agreements are published each month in the *LABOUR GAZETTE*. The Research and Statistics Branch makes analytical studies of current agreements on file, by industry and by topic. The first six of these, covering the Pulp and Paper Industry, the Manufacture of Iron and Steel and their Products, the Manufacture of Non-Ferrous Metal Products, Non-Metallic Mineral Products and Chemical Products, the Coal Mining Industry, and the Fishing Industry, and Statistics on Numbers of Workers affected by Collective Agreements in Canada, 1946, by industry, have been published in previous issues and have also been printed as separate bulletins. Copies of these bulletins are available, on request.

² This percentage excludes those workers affected only by agreements extended by Order-in-Council under the Quebec Collective Agreement Act. If they are included, the proportion is 46 per cent.

existed several similar, or even identical agreements, signed by individual employers. Where there was clear evidence of joint negotiation, the agreement was included; where such evidence was not available, the agreement was excluded. It is possible that lack of evidence has resulted in the exclusion of a number of instances of bargaining with employers' groups so that the total figures may represent a slight underestimate of the proportion of workers covered by collective agreements negotiated with two or more employers.

There are four types of agreements which affect more than one establishment but which are *not* included in this study. These are:—

(1) Corporation-wide bargaining, in which several or all of the establishments of one corporation are affected by a single agreement;

(2) Agreements signed by smaller companies in the same field to conform completely or partially to an agreement already made between a larger company and the same union (see below under Coal Mining) unless there is evidence of joint negotiations;

(3) Identical agreements drawn up by the union and submitted to and signed by individual employers without any group negotiation, e.g., certain motion picture theatres and restaurants;

(4) Agreements reached as a result of multi-employer and union negotiations which serve only to amend in one or two respects the original agreements made on a single company basis have also been excluded and the original complete agreements are considered as being on a single company basis. (See below under Pulp and Paper and Steam Railways.)

There are several types of employer associations and groups of employers which sign collective agreements with unions. The formal and continuing types of organization include both trade associations already existing for other purposes and associations formed especially for collective bargaining. The committees of employers formed for the purpose of collective bargaining do not usually have any continuing organization nor do the two or more employers who negotiate jointly and sign the same document or separate identical agreements. There is also one instance in 1946 of a number of employers using a commercial service to negotiate a form of agreement with the union that is signed separately by each employer. This same service has more recently negotiated agreements on behalf of other employers.

There is a variety in the subjects covered by the agreements. Some cover all points over which the parties bargain, e.g., the clothing manufacturing industry agreements, while in others the group agreement covers certain subjects but leaves the negotiation of wage scales and possibly certain other working conditions to be carried out on an individual company-local union basis. Some have provision for joint machinery for the settlement of disputes while others provide for such settlement on a single company-local union basis.

An examination of the first table, showing the proportion of workers covered by group collective agreements in relation to the total under agreement, indicates that group bargaining is more common in those manufacturing industries made up of many small firms. The Department has no evidence of it in the mass-production industries, such as the automobile and electrical products industries. As will be seen from the table on area coverage, many group agreements cover the employers and union in an industry in a single city, others are on a regional basis, while a very few cover the whole country. It is notable that the agreements with employer groups covering a region are usually in a primary industry, such as logging, or coal mining in Alberta and British Columbia, while the city-wide agreements are more common in those manufacturing industries where the small firm is characteristic.

Collective bargaining between unions and employers' associations and groups of employers in a number of the principal industries is discussed later in this article.

The Collective Agreement Act, Quebec

In the province of Quebec, the Collective Agreement Act has given special encouragement to collective bargaining between associations or employers' groups and unions. First passed in 1934, and revised several times since, the Act provides that a collective agreement signed between one or more employers in an industry and the *bona fide* representative of the employees may be extended to cover all the workers in an industry in the province or in a section of the province. Ninety-eight per cent of the 239,777 workers affected in 1946 by agreements extended under this Act were working under the terms of agreements made between unions and associations of employers or in a few cases several employers not in a formal association.

Only certain terms of collective bargaining can be extended by the Collective Agreement Act. These are: wages, hours

| | | Quarrying and sandpits | Jewellery, watchmaking and repair | | |

⁽¹⁾ This table does not show the extent to which all employees in these industries are covered by agreements. In addition, it excludes the workers covered by the extension of agreements by Order in Council under the Collective Agreement Act of Quebec.

of labour, apprenticeship, vacations with pay, family allowances, the classification of operations and of employees and employers. However, some associations and single employers parties to a collective agreement extended under the Act sign separate agreements covering such matters as union status, grievance procedure, and arbitration which would be applicable to its own members only. Thus some of the employers in the garment trades in Montreal have associations which sign agreements with the garment trades unions, in addition to being a party to the agreement extended under the Collective Agreement Act. (See below, section on the clothing industry.)

The terms of a collective agreement coming within the scope of the Act may be extended by Order in Council. Any party to such an agreement may petition the Lieutenant-Governor in Council that an Order in Council be passed ordering that the terms of the agreement shall also bind all the employees and employers in the "trade, industry, commerce or occupation" concerned in the whole province or in a stated region of the province. After publishing the agreement which it is proposed to extend, 30 days is allowed for filing objections. These are considered and

if necessary an inquiry made, whereupon the Minister of Labour may recommend the approval of the petition (with or without amendments) by the Lieutenant-Governor in Council and an Order in Council may be passed. The Act states that in making his recommendation, the Minister of Labour must consider whether the provisions of the agreement "have acquired a preponderant significance and importance for the establishing of conditions of labour," and he must also keep in mind the competition of outside countries or other provinces.

The agreement so extended is enforced by a joint committee of the parties with, at the Minister's discretion, representatives of non-parties.

The Collective Agreement Act of Quebec has been especially effective in encouraging collective agreements between unions and employers' associations or groups in certain industries, such as construction, the garment industries, boots and shoes, printing, trade and professional establishments. In some of these industries, e.g. boots and shoes, the collective agreements with employers' associations extended by Order in Council in Quebec are the sole examples of such with employers' associations in the industry in Canada. If the number covered by collec-

tive agreements extended by this Act is included in the national total, the proportion of workers under agreements with employers' associations or groups to all workers covered by agreements increases from 26 to 46 per cent in 1946. A list of the industries in which the agreements so extended occur is given on p. 24.

Group Collective Bargaining In Certain Industries

The following section comprises a discussion of group collective bargaining in a number of selected industries. Steam Railways is an example of national bargaining; water transportation illustrates both national and local bargaining; the next four represent regional bargaining and the remainder are restricted in coverage to local areas.

Steam Railways

While generally the agreements in this industry do not fall within the scope of

this article, there is contained within the structure of their agreements two examples of national bargaining. The steam railway companies each sign a number of agreements covering defined groups of their employees, all of which are separate agreements made by the individual company and the union or other group of employees concerned, with two exceptions. These are the two agreements signed by the Railway Association of Canada: one governing the skilled trades in the locomotive and car departments of the several railways which is with Division No. 4, Railway Employees Department (AFL), and the other the maintenance of way employees, that is those working in the track and bridge and building departments, which is with the Brotherhood of Maintenance of Way Employees. The Railway Association of Canada in these agreements represents the Canadian National Railways, the Canadian Pacific Railways and several smaller railways.

⁽¹⁾ Excluding those covered only by agreements extended under the Collective Agreement Act.

During the war various decisions of the National War Labour Board applied to several railways, and since 1946, there have been two agreements signed jointly by the CNR and the CPR and certain other railways with various unions. These concerned the granting of vacations with pay to certain classes in 1947 and the general wage increase in 1948. They did not replace any existing single agreements but served only to amend them in these two respects. For the purpose of this study then, only the employees affected by the two joint agreements mentioned in the previous paragraph have been considered as being affected by agreements with an association of employers.

Water Transportation

Group agreements in this industry are chiefly in the deep-sea shipping and stevedoring divisions of the industry. Co-operation in the signing of agreements amongst employers is not as highly developed in lake and coastal shipping, nor in freight handling.

East and West Coast Canadian ship-owners jointly sign agreements for deep-sea dry cargo freight vessels. Four agreements cover deck officers, engineer officers, radio officers and unlicensed personnel and affected about 7,300 men in 1946. The Shipping Federation of Canada and the Shipowners' Association (Deep-sea) of B.C. handle negotiations. Group coverage was complete except for one very large company whose ships have since been sold to other firms.

In the stevedoring division, the Shipping Federation of Canada, operating in Montreal, Halifax and Saint John, and the Shipping Federation of B.C., are the only important organizations of employers. Their collective agreements are with the International Longshoremen's Association (AFL-TLC) and the International Longshoremen's and Warehousemen's Association (CIO-CCL), respectively, and cover longshoremen, shipliners, checkers and coopers, etc. As in shipping, the group bargaining chiefly applies to deep-sea vessels, although a few coastal group agreements are signed in B.C., and in Montreal a group agreement for lake and coastal companies has been extended by Order in Council. The coverage of group agreements for longshore work connected with deep-sea vessels is complete.

Coal Mining

The great majority of coal mine operators in Western Canada belong to one or other of two employers' associations: the

Western Canada Bituminous Coal Operators Association and the Domestic Coal Operators Association of Western Canada, operating in separate fields. Both of these associations have agreements with District 18 of the United Mine Workers of America which provide for final settlement of grievances through the Associations and the union. In the case of the Domestic Coal Operators Association, separate district agreements are signed. For both associations, there are some variations in contract rates and certain other conditions on a local or mine basis. If the Association and union representatives cannot agree, an independent chairman will be chosen, and the decision of the committee as thus constituted will be binding on both parties. In Saskatchewan several small operators sign a joint agreement, also with District 18 of the UMWA. In Eastern Canada, on the other hand, all agreements are between single companies and the union. The largest company, the Dominion Coal Company Ltd., has an agreement with District 26 of the United Mine Workers of America, and several other companies have similar agreements. Consequently, these agreements in Eastern Canada have not been included in this study. The provisions of the agreements in this industry were summarized in a special article, one of this series, in the *LABOUR GAZETTE*, December, 1946, p. 1692.

Logging and Wood Products

Almost all agreements in the logging industry are negotiated between the unions and groups of employers. In Northwestern Ontario, paper manufacturing companies and other pulpwood cutting operators have a "master agreement" with the Lumber and Sawmill Workers' Union of the United Brotherhood of Carpenters and Joiners of America. The 1946 agreement was reached in settlement of a strike. However, in 1947 the agreement was reached at a joint conference between employers and the union. The 1947 agreement includes a minimum wage scale. In both years the master agreement was then signed as individual agreements between each of the employers and the local union concerned. Machinery for the settlement of disputes is on an individual company-local union basis.

In British Columbia, the greater part of the industry is located in the coastal area and employers are represented by a commercial research organization in negotiations with the International Woodworkers of America. A master agreement is drawn up each year which covers the logging, sawmill and other woodworking industries. It does

not include a minimum wage scale but a flat wage increase over existing rates is included. This agreement is then signed by individual companies and the local union and a minimum wage scale is negotiated on a single company basis. The provision for settlement of disputes as set forth in the master agreement is also worked out on a single company-local union basis. Similarly in the interior of British Columbia, two employers' associations represent the employers in the negotiation of regional agreements covering logging and woodworking industries.

Fishing and Fish Products

Collective agreements in the fishing industry exist only in British Columbia and practically all of these are negotiated by employers' associations or groups. Employers' associations include the Salmon Cannery Operating Committee and certain fishing vessel owners' associations, while in the case of halibut fishing a number of companies jointly sign the agreement. The great majority of the fishermen are represented by the United Fishermen and Allied Workers' Union and in the case of Indian fishermen by the Native Brotherhood of British Columbia. The latter is not a trade union but assumes the function of a union in signing collective agreements. The provisions of agreements in this industry were summarized in "Collective Agreements in the Fishing Industry in Canada, 1947" (L.G., Oct., 1947, p. 1426).

In the fish canning, packing and processing industry, almost all of the agreements in British Columbia are also negotiated by an employers' association, the Salmon Cannery Operating Committee and in the case of the fresh fish and cold storage industry in Prince Rupert by a group of companies jointly signing an agreement. As in the fishing industry, employees are represented by the United Fishermen and Allied Workers' Union and the Native Brotherhood of British Columbia.

Pulp and Paper Industry

In the pulp and paper industry, it is only in British Columbia that there is a collective agreement jointly negotiated by a group of pulp and paper manufacturers with the unions. In Eastern Canada where most of the industry is located, separate agreements are signed for each firm. In Ontario, each year, most of the major newsprint, kraft and paper board manufacturers negotiate as a group, with the International Brotherhood of Paper Makers and the International Brotherhood of Pulp,

Sulphite and Paper Mill Workers to agree on a common wage change for that year. The manufacturers of fine papers in Ontario follow a similar policy of separate agreements, with common negotiation on the amount of the wage change.

In the province of Quebec all agreements are signed by individual firms, and there is as yet no agreement on a scale comparable to Ontario on the amount of increase to be granted.

Printing and Publishing Industry

Some 63 per cent of all workers under collective agreements in the printing and publishing industry in Canada are covered by agreements signed with employers' associations or employers' groups. The formal association of employers is characteristic of the job printing section of the industry, while the informal group of employers signing collective agreements is more frequently found in the newspaper publishing section. Both Toronto and Montreal are very important centres of the job printing industry in Canada. In Montreal the workers in the industry are covered by a collective agreement extended by Order in Council under the Quebec Collective Agreement Act. Of those under group agreements in this industry in Canada, if all workers under agreements extended by this Act are excluded, some 42 per cent work in the Toronto area. In this city, approximately 84 per cent of all workers in the printing industry under collective agreements are under those signed by employers' associations or groups. Of the two types, that signed by the associations affects the most workers.

Toronto is a leading centre of the advertising, book and magazine publishing branches of the industry. In the job printing section of the industry in Toronto, there are two major associations of employers, the Master Printers and Bookbinders of Toronto, and the Toronto Graphic Arts Association. These associations together form a joint standing committee, which signs two agreements on their behalf, one with the International Printing Pressmen and Assistants Union, and one with the International Brotherhood of Bookbinders. The Master Printers and Bookbinders Association was formed about forty years ago, for the express purpose of collective bargaining. The Toronto Graphic Arts Association, on the other hand, is a regular trade association and collective bargaining is only one of its functions.

The agreements signed by these associations with the pressmen and bookbinders resemble each other very closely. This

similarity may possibly be accounted for by the fact that in 1938, the two associations and the two unions signed the same agreement; it is only in recent years that separate agreements were signed with each union. In 1946 both the pressmen and the bookbinders' agreements covered the same topics—minimum wage rates, hours, overtime, statutory holidays and apprenticeship, and both have identical provisions relating to grievance procedure and arbitration. In addition to these matters, the pressmen's agreement for 1947-1948 includes union security provisions, although in the case of the bookbinders, negotiations on this issue are still between the individual firm and the union.

It is through the arbitration procedure that the associations continue to share in union-management relations beyond the negotiation of the collective agreement. Although provision is made for the adjustment of grievances within the individual firm, if the case is not settled on this level it is taken before a permanent arbitration committee, composed of two members representing all the employers, and two representing the union. If the committee cannot reach an agreement, they must choose a chairman, whose decision is final and binding on both parties.

In the newspaper section of the printing and publishing industry, collaboration among employers for collective bargaining usually takes the form of joint signing of collective agreements negotiated with locals of the printing unions whose members are employed in the newspapers. It is usual for all the publishers who have signed an agreement to choose two members of a joint standing committee on which the union has equal representation. The function of this committee is to interpret the agreement and to settle disputes which may arise. There are no formal associations of employers for the purpose of collective bargaining, and although the newspaper publishers have their own trade association, it does not participate in the negotiation of a collective agreement. However, in some newspaper agreements, the publishers' association may be called upon to assist in the selection of a fifth member of the joint standing committee, if the committee is deadlocked on a dispute, and cannot itself decide on an additional member. If the committee of four cannot agree, they must choose a fifth member, to act as chairman: the majority decision of this committee of five is binding on all parties to the dispute.

Although most of the bargaining in the printing industry takes place within a local area, that between the Amalgamated Litho-

graphers of America and the Canadian Lithographers Association is usually on a broader regional basis. The local agreements between these two bodies in 1946 were an exception to their general practice of regional bargaining. More recently in the 1948 agreement the former custom was re-established. At the present time, a single agreement between the lithographers' union and the eastern division of the employers' association covers Hamilton, London, Ottawa, Toronto and Montreal.

In many of the smaller centres throughout Canada, where most of the printing is done in small establishments employing a very few workers, the printing trade unions, especially the typographical and pressmen's unions, make use of the standard form of agreement which allows for certain local variations especially in wage rates, and they are submitted for signature to the individual employers. In most cases, this standard form is one which has the approval of the international office of the union.

Men's and Women's Fine Clothing Industry

Collective agreements with formal employers' associations are the outstanding characteristic of the collective bargaining in the men's and women's fine clothing manufacturing industry. While there are some instances of agreements signed between the unions and the individual firm, the agreement with the formal association predominates. The Department has no examples of collective agreements signed by unions and informal groups of employers.

One of the most striking features of the agreements with the employers' associations in both men's and women's fine clothing is the system designed for peaceful settlement of disputes, through a grievance procedure and arbitration by an impartial chairman, whose decision is final and binding on all parties. In most cases, the association, through its representative, figures prominently in the adjustment of disputes; negotiation between the union representative and the association representative is usually the intermediate step between attempt at adjustment in the individual firm and arbitration. Arbitration may be either by an arbitration board, consisting of two representatives of the union, and two representatives of the association, and an impartial chairman, or by a single arbitrator. The arbitration board is more common in the men's fine clothing, while the individual arbitrator is more characteristic in the women's dresses and women's cloaks and suits industries.

The impartial chairman, as the arbitrator is usually called, is chosen jointly by the union and the employers' association, and except in special circumstances his tenure is continuous at least for the life of the agreement. There are some examples of arbitrators who have held office for a considerable number of years. This is in contrast to the printing trades, where a different arbitrator is chosen for each separate dispute which cannot be settled otherwise.

Although agreements with employers' associations predominate in both men's and women's fine clothing, they are most prominent in the women's section. Some 94 per cent of all workers on women's fine clothing under collective agreements are covered by agreements between various associations and the International Ladies Garment Workers' Union. The women's fine clothing industry is divided into two distinct branches, the manufacture of cloaks and suits, and the manufacture of dresses, and in each city there are separate associations for each branch. In Toronto, for example, there is the Toronto Cloak Manufacturers' Association and the Dress Manufacturers' Guild, each of which signs separate agreements with the International Ladies Garment Workers' Union. In each city, the membership of this Union is divided into several locals, on either a craft or an ethnic basis. In the negotiations with the employer associations in each section of the trade, the locals of the union concerned are represented by a Joint Board, which signs the agreement on behalf of the union locals.

In the men's fine clothing section of the industry, the percentage of workers covered under agreements with employers' associations is somewhat less than that in the women's branch of the industry. The agreement signed with the individual firm which is not a member of the employers' association is still important, especially in the Montreal area. In that city, the Amalgamated Clothing Workers' Union submits a standardized "market" agreement for the signature of the firms outside the association.

As in the case of the women's fine clothing industry, the negotiations of all local area agreements with employers' associations are undertaken by a Joint Board on behalf of the several locals of the Amalgamated Clothing Workers Union in each city.

In the clothing trades in the Province of Quebec, the Collective Agreement Act has given considerable impetus to the formation of employers' associations. To

meet the requirements of the Collective Agreement Act, three associations, the Montreal Clothing Contractors' Association, the Quebec Association of Garment Manufacturers, Inc., and the Associated Clothing Manufacturers, signed a joint agreement with the Amalgamated Clothing Workers Union and La Fédération Nationale du Vêtement. This agreement, incorporated into an Order in Council, covers wages, occupations, holidays with pay, vacations with pay, and its provisions are extended to all workers in the industry throughout the province. Only the Associated Clothing Manufacturers of the Province of Quebec signs an agreement with the Amalgamated Clothing Workers Union in addition to that forming the basis of the Order in Council: this separate agreement covers such subjects as union status, grievance procedure and arbitration.

In the women's fine clothing section of the industry, there are two Orders in Council, one for dress manufacture, and one for the cloaks and suits. The Order in Council for the dress section of the industry extends an agreement between the Montreal Dress Manufacturers' Guild, the Association of Washable Cotton Service Apparel Manufacturers of the Province of Quebec, and the International Ladies' Garment Workers Union, and L'Union nationale du Vêtement, section de la robe. Apart from the Order in Council, only the Dress Manufacturers' Guild signs an agreement with the International Ladies' Garment Workers' Union. Although there is no association of contractors in this section of the industry which is party to a collective agreement, the Order in Council specifically states that its provisions shall apply to contractors, subcontractors and manufacturing retailers. In the cloak and suit section of the industry, on the other hand, the only two parties to the agreement extended by Order in Council are the Association of Manufacturers of Cloaks, Suits and Ladies Garments of the City of Montreal, and the International Ladies Garment Workers Union—who are also party to a separate agreement outside the operation of the Act. However, the agreement extended by Order in Council is to apply to all manufacturers in the province, including contractors and subcontractors.

Construction

Group bargaining by employers has been practised in Construction for many years. Contractors are organized in most large centres under local Builders' Exchanges, and are often grouped in sections—General

Contractors Section, etc.—which deal with the business agents of the various local craft unions. The Builders' Exchanges have a stabilizing influence on the industry. They require certain standards of membership and therefore represent contractors of sound financial standing. The agreements negotiated under the Exchange set the pattern for the area generally, and are followed by the numerous small building contractors who often operate with only verbal agreements.

Although construction is organized on a local basis and bargaining is, therefore, local, most of the Builders' Exchanges are affiliated with a national organization, the Canadian Construction Association, which distributes information and seeks to co-ordinate the various units of the industry.

Specialized contractors in some fields have formed bargaining associations designed for their specific needs. The National Association of Master Plumbers and Heating Contractors maintains branches in each province, the Canadian Association of Painting and Decorating Contractors operates in Ontario. Electrical contractors are another technical sub-contracting group which bargains collectively but with less formal organization. On the local level, many larger members of the sub-contracting associations also belong to the Builders' Exchange, which contributes to co-ordination in the area.

There are many powerful trade unions organized in construction. The United Brotherhood of Carpenters and Joiners, the Bricklayers, Masons and Plasterers' International Union and the International

Brotherhood of Electrical Workers, for example, were established in Canada before 1900, and are strongly organized throughout the country in big single locals. Also, Building Trades Councils have long been operating in most large centres, formed of the various craft locals; the Councils are not bargaining agencies, but work for unity amongst the different crafts.

Both employers and the unions in construction are therefore well organized on the local and national levels. Actual collective bargaining is on the local level, but national policies affect many matters such as apprenticeship, arbitration clauses, etc. Joint organization was a logical step and has functioned since 1920, the object being to co-operate to improve the industry and to unite in recommendations to the Government. A National Joint Conference Board was established in 1920, formed of representatives of employers and the building trades, with a government-appointed chairman. The Board met periodically to discuss common problems such as apprenticeship training, etc., and to draft recommendations concerning the industry to the government. The joint meetings lapsed during the depression but were renewed in 1941, with the addition of seventeen joint zone committees, and have continued since.

The coverage of group agreements in construction is very high as a result of its integrated organization on both sides.

Two of the few national agreements are found in construction—covering the elevator constructors and the sprinkler fitters across the country, although the number of workers involved is small.

ALLEGED COMBINE IN THE BREAD-BAKING INDUSTRY IN WESTERN CANADA

A special commissioner under the Combines Investigation Act reported recently that in his opinion certain western bakeries had been parties to the formation of a combine, and that their activities had resulted in the progressive elimination of price competition in the sale of bread in Saskatchewan, Alberta and British Columbia.

Five bread-baking companies operating in Saskatchewan, Alberta and British Columbia and two bakers' associations in the latter two provinces are named as parties to an alleged combine, in a report by H. Carl Goldenberg, Montreal barrister, made public by the Minister of Justice in

December.* Mr. Goldenberg, as special commissioner under the Combines Investigation Act, has conducted an inquiry in recent months in Saskatchewan, Alberta

* *Report of Commissioner on Alleged Combine in the Bread-Baking Industry in Western Canada.* King's Printer, Ottawa, 25 cents.

and British Columbia. His investigation followed a preliminary examination initiated by the Combines Investigation Commission in which considerable documentary evidence had been accumulated. "In my opinion," the report of the special commissioner concludes, "the evidence discloses that the acts in restraint of trade committed by the companies and associations named hereunder constitute violations of the provisions of the Combines Investigation Act, and that the following have been parties to the formation of a combine within the meaning of Section 2 of the Combines Investigation Act:—

McGavin Bakers Limited;
 McGavin Limited (Alberta);
 McGavin Limited (British Columbia);
 Canadian Bakeries Limited;
 Weston's Bread and Cake (Canada) Limited;
 Alberta Master Bakers' Association Incorporated;
 Master Bakers' Association (Vancouver).

During the inquiry hearings were held in March and April, 1948, by Mr. Goldenberg at Edmonton, Calgary, Vancouver, Regina, Saskatoon and Winnipeg at which witnesses were examined and representations heard from those concerned. Counsel for the Commission was Mr. E. H. Logan, barrister, of Edmonton.

The outstanding feature of the bread-baking industry in the three provinces was found to be the predominant position held by three groups referred to in the report as "the Western chain bakeries". These bakeries, originally built up under the financial control of flour milling companies, today produce roughly three-quarters of the quantity of bread made in the three provinces. By far the larger volume of their sales are made to retail stores, the balance by delivery. Owing to their strongly consolidated position in the industry, these chain bakeries have become "the moving spirits and the dominant factors in the bakers' associations."

In reviewing the activities of the members of the alleged combine Mr. Goldenberg states in his report:—

The activities as already described of the Western chain bakeries and the Associations which they have supported have resulted in the progressive elimination of price competition in the distribution and sale of bread in the provinces of Saskatchewan, Alberta and British Columbia. Throughout the various areas in these provinces in which these bakeries hold the dominant position in the industry, the structure of the prices at each trade level has been established by agreement or common understanding and arrangements made to check and limit

possible deviation from the prices so established. Through agreements on wholesale prices and the level of prices to the consumer the element of price competition has been removed in large measure from the distribution of bread whether sold by the bakery on a house-to-house delivery basis or by independent merchants through retail stores. Such activities, if completely successful, would establish one price for bread in any particular area regardless of the efficiency of the bakery which produced it or of the means of distribution whereby it was supplied to the consumer. This would not be a market price reached under conditions of price competition but a price established and maintained by the joint action of suppliers.

The Alleged Bread-Baking Combine: Alberta

The Western chain bakeries, acting through the Alberta Master Bakers' Association Incorporated, appear to exercise their greatest degree of control of competition in the province of Alberta. Agreements governing the price structure in the province have been supplemented by subsidiary agreements and arrangements designed to regulate the allocation of territory, the maintenance of resale prices, the establishment of depots, the submission of uniform tenders to institutions and to the armed services, and to eliminate inter-provincial price competition along the Alberta-Saskatchewan border-line.

Evidence obtained from written agreements, correspondence, minutes of meetings of the Association and testimony at the hearings pointed to the fact that the policy of agreeing to and fixing uniform prices dated back to at least the year 1935.

After the outbreak of war the policy of the bakers and the Association to regulate prices continued in full force. This policy extended even to the submission of uniform tenders to military establishments. Mr. Goldenberg comments:—

The policy of price fixing and price maintenance by agreement was introduced in the years before the war and was continued throughout the war years during the period of wartime controls and subsidies. And, as the end of these controls and subsidies was approaching, the bakers prepared through the Association to continue and did continue their long-established policy with respect to prices.

With the removal of price controls on September 15, 1947, the large bakers and the Association immediately took steps to secure a uniform advance in prices. The results were that the prices of bread were increased uniformly on September 17 in Calgary and the southern territory, and, on September 18, in Edmonton and the northern territory.

The policy of the three chain bakeries to control the resale price of bread distributed by retail stores is brought out in several incidents reported by Mr. Goldenberg. The latest of these reported occurred after the removal of price control on bread in September, 1947, when one chain store company and some department stores attempted to sell bread below the levels established by the chain bakeries. It was indicated to the retailers that supplies of bread would be discontinued if retail prices were not maintained. In connection with these incidents the report states:—

The evidence in this Safeway incident establishes an agreement among the principal bakers fixing the wholesale and retail price of their product with a view to lessening competition. It further establishes the fact that, in order to enforce the agreed retail price resort was had to threats to discontinue supplies and to the actual discontinuation of supplies. . . .

The managers of the three chain bakeries in Edmonton thus admitted concerted action to maintain the retail price which had been agreed upon and established. This was designed to, and did, lessen competition. The effect was to prevent the consumer from purchasing bread at a lower price than that fixed by the three chain bakeries.

The Alleged Bread-Baking Combine: British-Columbia

In British Columbia as in Alberta the evidence indicated that the three chain bakeries, acting through the Master Bakers' Association in Vancouver and a local bakers' association in Victoria, were able from pre-war years to establish and maintain by concerted action uniform wholesale and retail prices, and that this was part of an over-all plan to control all bread prices in the three provinces. On this aspect Mr. Goldenberg comments:—

The evidence, therefore, tends to establish the fact that the agreements to lessen competition are not solely of a local or provincial nature but are wider and are intended to cover and do cover the activities of the Western chain bakeries in Alberta, British Columbia and, as will be shown, in Saskatchewan. In other words, the evidence establishes that concerted action to lessen competition on a local or regional basis is part of an over-all policy to this end agreed upon and enforced by the three chain bakeries in the three provinces.

Inter-company correspondence revealed that the Western chain bakeries were anxious in 1939 for all bread prices in the three western provinces "to move up together." Lack of co-operation with this plan was met with from Safeway Stores and from Robertson Bakeries Ltd., Vancouver (then a branch of Purity Baking Company, Toronto). However, in July, 1941, a price increase was arranged and put into effect

in Vancouver on the same day by the three chain bakeries. From then until 1944 there was considerable concern on the part of the chain bakeries over the fact that Robertson Bakeries Ltd. were not abiding by the agreed upon price structure. This was the occasion of frequent correspondence between the senior officials of the three chain bakeries, and finally culminated, by May, 1944, in a joint meeting at Vancouver of these officials and their local managers with the general manager of Purity Baking Co. Ltd., Toronto, in an attempt to bring Robertson Bakeries Ltd. into line. At this meeting it was agreed that all existing discounts would be maintained but that no new discounts would be given. In commenting on this meeting the Special Commissioner says:—

The evidence with respect to this meeting and the resulting agreement establish concerted action to "freeze" and to maintain the wholesale price of bread by exercising pressure on a competitor, that is, Robertson Bakeries. It was the same kind of pressure that was used in Alberta to force various bakers to enter into and observe the agreements promoted by the three chain bakeries. The purpose was to lessen competition.

At a meeting in Vancouver in November, 1945, the various agreements and understandings in the bread industry were consolidated. The following points were included to become effective with the next price increase:—

1. All rebates and discounts to be discontinued.
2. The price to the retailer and to restaurants to be the full resale price, less 20 per cent.
3. Unwrapped bread to be sold at the same price as wrapped bread and all bakeries to produce only one quality bread.
4. The "shipping price" of bread to be $\frac{1}{2}$ cent less than the prevailing city price.

With the removal of price controls on September 15, 1947, the prices, both wholesale and retail, of the Western chain bakeries were increased uniformly in Victoria on September 17 and in Vancouver and Nanaimo on September 18. All rebates and allowances were eliminated in Vancouver when the price increases went into effect. In commenting on the actions of the bakers Mr. Goldenberg states:—

The increase in bread prices in British Columbia, as in Alberta, had been preceded by Association meetings and discussions among the larger bakers on the new prices. . . .

The evidence establishes that the practices and policies of the principal bakers in Vancouver were also pursued by them in other British Columbia cities, more particularly in Victoria, which has its own local association.

The policy of resale price maintenance was found to be followed by the Western chain bakeries in British Columbia as well as in Alberta. That supplies would be refused if resale prices were not maintained by retailers was indicated to be their policy. The chain bakeries contended that no injury resulted to the consumer from this policy as it was "primarily concerned with the elimination of secret rebates and discounts which allegedly affected the wholesale price only and did not benefit the consumer, since the retailer did not pass on the discount to him." On this point, however, the Special Commissioner differed, and in the report states:—

Nevertheless, the evidence establishes that the bakers were concerned not only with the fixing and maintenance of a uniform wholesale price, but also with the fixing and maintenance of a uniform retail price. The policy of retail price maintenance in itself prevented retailers from passing on the benefits of rebates and discounts to consumers.

With respect to tenders to institutions, and to the armed services in wartime, the same policy applied in British Columbia as in Alberta and Saskatchewan, in that the bakers through the medium of the Association agreed to the submission of uniform tenders, thereby eliminating the element of competition entirely.

The Alleged Bread-Baking Combine: Saskatchewan

With some exceptions, conditions in the break-baking industry in Saskatchewan paralleled those in the other two provinces in that the three Western chain bakeries with the assistance of the Saskatchewan Bakers' Association fixed and maintained prices in different zones of the province. The evidence discloses that much of the price-fixing and many of the policies connected therewith were determined directly among the large bakeries themselves. There was direct agreement as to interprovincial shipments, the establishment of depots, the fixing of shipping prices and the submission of uniform tenders to military establishments. In 1946 the three chain bakeries agreed to the division of the province into price zones. Unlike the other two provinces there was more competition between areas, particularly in northern Saskatchewan.

When prices were decontrolled in September, 1947, "the bakers in Saskatchewan held meetings to discuss changes in the price of bread consequent upon the removal of the subsidy." Immediately after these meetings all the bakers in the province were informed by a circular letter from

the Association "that Saskatchewan bakers are increasing prices 3 cents per loaf as of September 18, 1947." Prices were increased uniformly in Saskatoon on September 16 and in the rest of the province generally on September 18. With the new increases all discounts and rebates were eliminated and uniformity was attained within certain zones in retail prices, city wholesale prices and country shipping prices.

Action to maintain resale prices was not at any time as aggressive as in the other two provinces. However, after the September, 1947, price increases, the Western chain bakeries were very active in keeping a watch on the small bakers in order, as correspondence cited in the report indicates, "to exercise some control over the smaller bakeries who may be inclined to go off the deep end and cut prices."

Bread prices in parts of northern Saskatchewan were kept below those in the southern part of the province by competition from a large independent bakery, namely Modern Bread Co., Prince Albert, which did not conform to any price agreements. This competition was regarded so seriously in 1947 that Canadian Bakeries Ltd. and McGavin Bakeries Ltd. together discussed methods whereby this situation could be dealt with—whether jointly to buy out Modern Bread, institute a bread war or meet the competitive prices. Finally, McGavin Bakeries Ltd., after discussing the matter with the vice-presidents of Ogilvie Flour Mills Co. Ltd. (this milling company has a controlling financial interest in McGavin Bakeries Ltd.), bought out Modern Bread in December, 1947. Canadian Bakeries Ltd. agreed not to canvass Modern Bread customers until after McGavin Bakeries Ltd. would become established and would have done something about adjusting the price structure upwards. With respect to this merging of enterprises to lessen competition Mr. Goldenberg reports:—

The purchase of Modern Bread in Prince Albert by McGavin Bakeries Ltd. and the simultaneous and subsequent agreements and arrangements between McGavin's and Canadian Bakeries were thus designed to and in effect did eliminate competition on a price basis in northern Saskatchewan. The successful elimination of competition resulted in a levelling up of prices by arrangement which was designed to and did increase the price of bread to the consumer.

Copies of the report have been remitted to the Attorneys General of Saskatchewan, Alberta and British Columbia for their consideration of the facts disclosed as a result of the investigation.

INTERNATIONAL LABOUR ORGANIZATION

Legislative Jurisdiction in Regard to Recent Conventions and Recommendations

The Minister of Justice has reported on the legislative competence of the Dominion and the Provinces with respect to the Conventions and Recommendations adopted at the San Francisco Conference. These texts deal with freedom of Association, employment service organization, and the night work of women and young persons.

Under the constitution of the International Labour Organization, the Government of Canada is required to bring Conventions and Recommendations adopted at International Labour Conferences before the appropriate authority or authorities in Canada for the enactment of legislation or other action.

An Order in Council of November 23 sets forth the opinion of the Acting Minister of Justice as to the legislative competence of the Federal and Provincial governments with respect to the texts adopted at the 31st Session of the Conference, held at San Francisco last summer (L.G., Sept., 1948, p. 972).

The Order indicates that three of the Conventions (dealing with freedom of association and the night work of women and children) are largely within provincial competence; whereas one Convention and one Recommendation (both dealing with employment service organization) fall within federal jurisdiction.

The texts adopted at the San Francisco Conference are as follows:—

Convention (No. 87) concerning freedom of association and protection of the right to organize;

Convention (No. 88) concerning the organization of the employment service;

Recommendation (No. 83) concerning the organization of the employment service;

Convention (No. 89) concerning night work of women employed in industry (revised 1948);

Convention (No. 90) concerning the night work of young persons employed in industry (revised 1948);

Instrument for the amendment of the schedule to the Labour Standards (Non-metropolitan Territories) Convention, 1947.

In regard to these texts the Order states as follows:—

That the Minister of Justice is of the opinion that with respect to Convention No. 87 concerning freedom of association and protection of the right to organize and Conventions Nos. 89 and 90 concerning night work of women and young persons employed in industry, the Provincial Legislatures are the competent authorities, except in relation to the Northwest and Yukon Territories and except as incidental to certain matters exclusive legislative jurisdiction in respect of which is not assigned by the British North America Act to the Provincial Legislatures;

That Convention No. 88 and Recommendation No. 83 concerning the organization of the employment service can be given effect to by Parliament or pursuant to authority conferred by Parliament; and

That the Instrument for the amendment of the schedule to the Labour Standards (Non-metropolitan Territories) Convention, 1947, applies only to non-metropolitan territories, and cannot fall within the legislative jurisdiction of the Provincial Legislatures.

The Order concludes by stating:—

The Committee (of the Privy Council), on the recommendation of the Acting Minister of Justice, advise that a copy hereof, together with the authentic texts of Convention No. 87 concerning freedom of association and protection of the right to organize and Conventions Nos. 89 and 90 concerning night work of women and young persons employed in industry be transmitted to the Lieutenant-Governors of the respective provinces with a view to the enactment of legislation or such action as each government may be advised to take with respect to such matters as fall within the competence of the Provincial Legislatures.

EMPLOYMENT OF WOMEN AND GIRLS IN RESTAURANTS

An almost general difficulty in recruiting women and girls for work in restaurants is reported by local offices of the National Employment Service. Better wages and working conditions, and improved facilities for training and up-grading workers, are suggested as among the possible means of improving the situation.

For the purpose of obtaining information with respect to specified aspects of the employment of women and girls in restaurants, particularly in relation to "the almost general difficulty of recruiting workers for these occupations," the National Employment Service sent out questionnaires to 180 of its local employment offices early in September. Returns received from 175 of the offices form the basis of a report prepared by the Employment Division of the Unemployment Insurance Commission.

The survey covered those occupations concerned with the preparation and serving of food in restaurants, in variety stores, as well as restaurants and cafeterias in industrial plants. The employments included mainly cooks, waitresses, dishwashers, kitchen helpers and "bus girls."

Replies to the questionnaire revealed that almost all local employment offices found difficulty in directing new entrants into the restaurant trades. The more common reasons given for this situation were: (1) hours of work (including long and irregular hours, shift work and Sunday work); (2) loss of social prestige; (3) unsatisfactory wage schedules; (4) poor working conditions; (5) heavy work; (6) lack of opportunity for advancement.

Of the 175 offices included in the survey, only 74 reported that applicants had any preference as to the size of the establishment. This preference was reported to be most marked in larger employment offices, fairly well balanced in the medium-size offices and of least account in the smaller offices. The fact that some 29 of the smaller offices had no large restaurants in their areas naturally affected their reports. However, in all three grades of employment offices, the preference of applicants was reported to be for establishments employing ten or more persons.

In most cases full table service restaurants were favoured by applicants, rather than lunch counters or cafeterias. Opportunities for obtaining tips had some bearing

on this preference, especially in larger centres. However, the replies received concerning this factor were too general to form a basis for more than very broad estimates.

In the larger local employment offices the occupation of cook was reported to be the most difficult to fill; the medium-sized offices placed dishwashers first, while the smaller offices indicated kitchen help. Waitresses were listed second in the larger offices and fourth by both medium and smaller offices.

The "loss of social prestige" was reported to have an important influence in making placements in restaurants in smaller communities. On the other hand, in the larger cities, with their large hotels and fashionable restaurants, employment in such establishments was looked upon with less disfavour.

The problem of obtaining workers for restaurant occupations, while not a new one, has been aggravated in recent years, as employment has been at a high level and a wider choice of jobs could be made. To a young person, the irregularity of hours of work is unattractive, as it precludes participation in social and recreational activities. The report indicates that "restaurant occupations for women are almost in the same category as domestic service in their general unattractiveness to Canadian women."

The report offers no single panacea to remedy the situation. However, it is pointed out that better wages and working conditions, more adequate facilities for training and up-grading workers, a wider use of labour-saving devices, regular rest periods, more equitable working shifts, adequate rest room facilities, "a greater and more understanding regard for employees as people" and thorough inspection of restaurants, not only for cleanliness and the hygienic handling of food, but also for working conditions, each and all of these would help to overcome the difficulties of obtaining and retaining employees.

ANNUAL CONVENTIONS OF U.S. LABOUR ORGANIZATIONS

During November the American Federation of Labour and the Congress of Industrial Organizations held their annual Conventions. Both organizations took a strong stand against Communism; for the AFL this was customary, but the CIO's vigorous attack against Communists constituted an important milestone in policy. Repeal of the Taft-Hartley Act and re-enactment of the Wagner Act were demanded by both bodies; while both determined to remain active in politics. Both supported the European Recovery Program, called for anti-inflation measures, and urged a housing program. Both adopted resolutions favouring the principle of labour unity.

American Federation of Labour

Approximately 700 delegates representing 7,220,000 members attended the 67th Annual Convention of the American Federation of Labour held in Cincinnati, Ohio, November 15 to 22, 1948. The delegates were drawn from 96 National and International Unions, 37 State Branches, 137 Central Bodies and 77 local Trade and Federal Labour Unions. Fraternal delegates were present from Great Britain, Western Germany, Austria, Palestine, Canada and South America.

Action was taken on a wide range of subjects of interest to members of the Federation, including a demand for the repeal of the Taft-Hartley Act; a decision to continue political action; overtures for union with the CIO and the United Mine Workers of America; reaffirming full support of the European Recovery Program; calling for a comprehensive nationwide home-building program; asking for a joint commission of labour, management and industry to fight inflation; and appealing to labour to unite to stop the progress of Communism.

Among the many speakers who addressed the Convention were Maurice J. Tobin, United States Secretary of Labour, Cyrus S. Ching, Director of the Federal Mediation and Conciliation Service, Paul G. Hoffman, Administrator of the Economic Co-operation Administration, Hon. Alben W. Barkley, Vice-President elect, W. Averell Harriman, Special Representative in Paris of the Economic Co-operation Administration, Hon. Hubert H. Humphrey, Senator from Minnesota, Dr. John R. Steelman, Labour Adviser to President Truman, Lyall T. Beggs, Commander-in-Chief, Veterans of Foreign Wars, Herbert L. Bullock and

H. William Hutchinson, fraternal delegates from Great Britain, Hugh J. Sedgwick, Trades and Labour Congress of Canada, Bernado Ibanez, President of the Inter-American Confederation of Workers, Franz Olah of the Austrian Federation of Labour, Hon. James C. Stewart, Supreme Court Judge, Ohio, Perry Brown, National Commander, the American Legion, and Marcus Schleicher, Chairman of the Zonal Council of the Trade Unions of the American Zone in Germany.

Address of President William Green

In his keynote address to the Convention, President Green reviewed the activities of Labour's League for Political Education in the recent Presidential election and asserted that the slogan of labour in that campaign was to defeat at the polls "those who voted for the adoption of that notorious piece of legislation, the Taft-Hartley Act." He declared that the next slogan of labour would be to defeat at the next election those members of Congress who refuse to vote for the repeal of the Act. "It is our purpose," he said "to centre our efforts towards the repeal of this objectionable piece of legislation."

Turning to the problems created by inflation, the President stated that "high prices and the uninterrupted rise in the cost of living have more than wiped out the wage gains of the nation's workers," and cited statistics issued by the United States Department of Labour to support his statement. At the same time, he felt that labour was unwilling to support "absolute wide-

spread price control" as it would result in the development of black markets. "Price control," he said "runs in conflict to economic law." He urged that the Government ought to call in representatives of labour, management and industry, to give "consideration to a constructive plan having for its purpose the reduction of this inflation trouble that is affecting the homes of every family in America."

With respect to international affairs, President Green asserted that the AFL had given purposeful support to the European Recovery Plan and had "thoroughly exposed the hypocrisy and evil nature of the Communists." In his opinion, "one of the most encouraging developments of the past year has been the growing disillusionment of non-Communist labour organizations in Europe with the World Federation of Trade Unions. "We are hopeful now," he continued, "that led by the British Trades Union Congress, these non-Communist labour organizations will soon break away from the WFTU and join with us in the establishment of a new international labour federation. . . ." Mr. Green assured the representatives of foreign trade unions at the Convention that the interest of the AFL in European workers was more than superficial and that the AFL would continue "to the best of our ability in full co-operation with the free democratic trade union movements of Europe." He praised the "self-sacrificing fight" the Jews were making to establish a homeland in Palestine and pledged "every ounce of help and protection we can give them."

On the housing problem, the President stated that "to meet present shortages and future needs, we shall have to build homes at the rate of one and a half million a year for the next ten years." He declared that the AFL "must insist" that the next meeting of Congress adopt this program so that American workers "can get enough new homes at a price within the reach of the average worker."

Mr. Green criticized "that notorious minimum wage law—40 cents an hour," and drew attention to the refusal of "a reactionary Congress" to raise this minimum hourly rate to 75 cents or one dollar in order to meet the requirements of inflation. It would be a part of the Federation's labour program to take action in this matter when Congress convened in January, he said.

In conclusion, Mr. Green said: "The American Federation of Labour stands as a bulwark against the invasion of ideologies that would change our form of

government. . . . Eight million members standing as one, speaking as one, working as one in opposition to the infiltration of Communism into our American life. . . . We are not torn by dissension over that issue, but instead we stand united in our determination to go forward in the future as we have gone in the past."

Address by Canadian Fraternal Delegate

Mr. Hugh J. Sedgwick, Secretary-Treasurer of the Ontario Federation of the TLC, fraternal delegate from the Trades and Labour Congress, sketched the progress of the trade union movement in Canada in recent years. He pointed out that the membership of Canadian labour unions had increased three-fold since 1936. This expansion he attributed to the rise of the industrial type of union, the industrial expansion resulting from the second world war and legislative changes that rendered it less difficult for workers to join unions. He declared that the TLC had striven for unity of action with other labour bodies in Canada, but regretted that this attitude had not always been reciprocated. As a result the TLC was deferring further action with a view to unity "until a clear and concise policy of unity has been worked out between the Executive of the Congress and other trade union bodies. . . ."

Mr. Sedgwick described Canadian social security measures and labour's proposals for legislation to deal with housing, the cost of living and racial discrimination. He commended the work of the Joint Co-operative Committee composed of representatives of the American Federation of Labour and the Trades and Labour Congress of Canada in ironing out difficulties that arose from time to time. He felt that the committee was a useful factor in securing unity of action by the international bodies and was of the opinion that the international trade union movement in America should be developed by the co-operation of the executive officers of both the AFL and the TLC.

The Housing Problem in the United States

The report of the Committee on building trades emphasized the interest of the American Federation of Labour in co-operative housing projects. Regret was implied in reference to the passage of housing legislation in 1948 "with none of the provisions requested by organized labour." However, it was felt that with

the majority of the next Congress committed to the enactment of a long-range housing program, the AFL should again take the initiative, "so that the goal of a decent home for every American family can be achieved." The report commended the building trades affiliates "for the manner in which they have helped develop an expanding apprenticeship program throughout the industry." In addition, it stressed the need for legislation to provide for "an adequate program of farm and rural housing, slum clearance and urban redevelopment, aids for financing large-scale co-operative and non-profit housing developments for middle-income families and direct Federal aid to local housing authorities for the construction of public housing projects." The report was adopted by the Convention.

Other Resolutions

Resolutions reflecting the wide and varied interests of organized labour were adopted. Among them were the following:—

Approving a continuance of the policy of opposition to the St. Lawrence waterway;

Urging that no additional taxes be placed on low income categories until other groups have been increased proportionately;

Proposing various voluntary measures for the conservation of food products, so as to increase amounts available for relief abroad;

Recommending a continuance of Labour's League for Political Education;

Suggesting an extension of the program designed to inform members of affiliated unions with the purposes of UNESCO;

Opposing universal military training;

Supporting in principle the Reciprocal Trade Agreement Act, but asking that American labour standards be safeguarded;

Urging a continuance of the program designed to bring about a general increase of minimum wages under the Fair Labour Standards Act;

Renewing allegiance to democratic principles and expressing disapproval of a policy of appeasement in dealing with certain foreign powers;

Adjusting the Federation's policy in the light "of the accelerated disintegration of the so-called WFTU;"

Promising all-out support to the ILO;

Endorsing a continuance of the Federation's support of the World Health Organization and toward a campaign to aid the world's needy children;

Asking the Federal Government to lift the arms embargo and "to extend the hand of warmest friendship and partnership to the new State of Israel;"

Recommending that the Federal Office of Education conduct a study of the whole field of vocational education, with a view to broadening and improving the system.

Election of Officers

The following officers were elected for the ensuing year:—

President: William Green.

Vice-Presidents: William L. Hutcheson, Matthew Woll, Joseph Weber, George M. Harrison, Daniel J. Tobin, Harry C. Bates, William D. Mahon, William C. Birthright, William C. Doherty, David Dubinsky, Charles J. MacGowan, Herman Winter, Daniel W. Tracy.

Secretary-Treasurer: George Meany.

The next annual Convention of the Federation will be held at St. Paul, Minnesota.

Congress of Industrial Organizations

The tenth annual constitutional convention of the Congress of Industrial Organizations was held in Portland, Oregon, November 22 to 26, 1948. There were over 600 accredited delegates in attendance representing 40 National and International Unions; 37 State Industrial Unions; 148 city and county Industrial Union Councils; and 96 local Industrial Unions, reported to have a combined membership of over 6,000,000.

Among the speakers who addressed the Convention were: Justice William O. Douglas, of the Supreme Court of the United States; Maurice J. Tobin, United States Secretary of Labour; Mayor Dorothy Lee, Portland; Isaac Ben Zevie of the National Jewish Council; U.S. Senator

Wayne Morse of Oregon; Walter White, Secretary of the National Association for the Advancement of Coloured People; Archbishop Edward D. Howard, Portland; Pat Conroy, Secretary, Canadian Congress of Labour and A. McDonald Gordon, Labour Attaché of the British Embassy, Washington. President Truman sent a message of greeting which was read at the opening session.

Among the many matters that were considered by the Convention were: the repeal of the Taft-Hartley Act and the re-enactment of the Wagner Act; the organization of unorganized workers; civil rights and social security legislation; farmer-labour unity; commodity prices and legislation; enlargement of the functions of

the United States Federal Department of Labour; guaranteed minimum annual wages; equal pay for equal work done by male and female workers; slum clearance and an expansion of the Government's housing and rent control policy; unity with the AFL; and future political action by organized labour.

An important feature of the tenth Convention was the vigorous attack against Communism launched by President Philip Murray and others. In previous years Mr. Murray had sought to maintain harmony as between Communists and their opponents, but at this Convention he was outspoken in his stand.

Address by President Philip Murray

In his address following the opening ceremonies, President Philip Murray commended the work of the Political Action Committee of the CIO during the Presidential election campaign in the United States. He asserted, that as a result of that election the CIO "is more powerful, numerically speaking, more influential, and more potent than it has ever been at any time in its history." Consequently, it was "our bounden duty and our obligation" to promote the constructive program of the President of the United States. "And number one on the list is the repeal of the vicious Taft-Hartley Act." In the second place, he said, the CIO should demand "a restoration of the excess profits tax, to lighten the burdens of inflation. . . ." He also advocated that the Government place a floor under prices for farm produce.

Turning to the questions of wages and social security, Mr. Murray said: "We are advocating the institution of a basic one dollar per hour minimum wage for all workers in the United States," and "ample social security and pension legislation to protect the interests of all workers and all people throughout the United States." He urged that American industry "expand its facilities and improve its plants to a point where production can be increased," so that the people could obtain "all of the essential necessities of life. . . ."

It is essential too, the President said, that American industry "must protect to a greater degree than ever before the life, the limb and the health of its workers," including sickness, hospitalization and other types of social insurance benefits, as well as protection for aged workers.

Referring to the need of organizing unorganized workers he asserted that "in the field of Government (United States)

services, public workers, white collar workers and workers employed in the retail and other fields . . . there are millions of unorganized workers." In a reference to the leadership of some of the unions with jurisdiction in these fields, he said: "If a Communist is leading a labour organization in the CIO and, after years of existence he is unable to demonstrate his fitness to organize the unorganized, then, in justice to the people employed in that industry he should resign." He recommended that the Executive Board of the CIO be empowered to make "a complete review" of the situation and "direct our attention to a realistic, practical, constructive solution of these organizational problems."*

Attack on Communism

In subsequent debates Mr. Murray directed a forceful attack against Communist elements in the CIO. He said he was "sick and tired of subtle manoeuvrings on the part of certain persons whose apparent aim was to undermine the interests of the CIO. He scoffed at Communist accusations that in supporting the Marshall Plan the CIO was "ganging up with Wall Street. He quoted the recent anti-Communist declaration of the General Council of the British TUC (see p. 14). On another occasion he said: "Under no circumstances am I going to permit Communist infiltration into the national CIO movement," and referred to the "dangerous, devastating, degrading effects that special outside interests, especially the Communist Party, may have on the labour movement in the U.S.A."

Address of Fraternal Delegate, Pat Conroy

In extending fraternal greetings from the Canadian Congress of Labour, Mr. Conroy said that "we in the Canadian Congress of Labour believe that we are a part of the CIO movement. We are coming here not merely as neighbours, but as your brothers and as your sisters in a continental trade union movement." He commended the part played by the CIO in the election of President Truman and compared the action taken by labour in the United States in supporting one of the older political parties,

* Since the Convention the CIO Executive has carried out this policy in two instances by (a) directing the United Farm Equipment and Metal Workers to merge with the United Automobile Workers; and (b) transferring jurisdiction over department store and allied workers to the Amalgamated Clothing Workers from the Retail, Wholesale and Department Store Union.

with that taken by the CCL in Canada in uniting for political action with a new third party. He explained that "we (Canadian labour) do not have the opportunity, nor yet the forum, nor yet the channels of influence to make mass penetration of the existing political institutions that you have in the United States. . . . In short, as we see it, the established political institutions in Canada are nothing but a closed shop for big business." Consequently, "we have chosen to endorse and support the Canadian equivalent of the British Labour Party which circumstances have brought into being."

Comparing current conditions in the two countries, Mr. Conroy said: "Our problems are basically the same as your own—high cost of living; trying to catch up on it by wage increases; our needs for greater social security, better old age pensions—all the many things you are asking for we are asking for as well."

Mr. Conroy referred to Communists as "trying to break up our trade union movement." Discussing the relationships between Canada and the United States in the light of present international tensions, he asserted: "You know, among a few in our trade union movement in Canada it is considered as something approaching treason to say a good word about the United States. . . . You are described as imperialists. We have made replies to those statements. . . . We stand with the United States and we make no apologies for it. In taking that stand we are standing with decency, with liberty, with the right of self expression, as against taking a stand asking to be driven underground where liberty is going to take a prolonged holiday. . . ."

World Federation of Trade Unions

The resolution on the World Federation of Trade Unions recalled that the WFTU had been established in 1945 "to organize and unite within its ranks all trade unions irrespective of race, nationality, religion or political opinion, with an agreement that the organization should not be used to advance the interests or point of view of any one national centre to the exclusion or detriment of any other."

It noted that "serious cleavages" had appeared during the past 18 months, in regard to the ERP and other issues, and that in consequence the CIO had found itself "aligned with the British TUC and other free trade union centres against the

Soviet trade unions and trade union centres allied with them."

It was therefore resolved:—

That the CIO delegates to the WFTU are commended for their persistent efforts to have the organization function along the lines agreed to when it was established;

That in view of these developments, the CIO officers and Executive Board are authorized, in consultation with the British TUC and other free trade union centres, to take whatever action in relation to the WFTU and the international labour movement as will best accomplish CIO policies and objectives.

CIO participation in an ERP Trade Union Conference in London in March, 1948, was approved by the Convention, and further collaboration with European unions along these lines was endorsed.

Hon. William O. Douglas

The new powers and responsibilities of labour were discussed by the Hon. William O. Douglas, United States Supreme Court Justice.

"The human welfare state is the great political invention of the twentieth century," he declared. "Labour was its prime promoter. It was the first group to feel most keenly the economic insecurity of the new industrial age. . . . But all groups in society—farmers, business and the professions—were its beneficiaries."

Stating that the European concept of the "class society" was "foreign to us in this country," he said:—

"To American labour this invitation to class warfare is obviously a call to travel a side-street which leads not to better living, but to destruction. American labour much prefers to operate directly on its problems such as wages, hours, and housing. It can do this at the bargaining table, at the polls, through organization, and through education and communication. These are the techniques that work; and they work immediately, directly, and fairly. They are not the complex brain-twisting, devious theories of Communism. They are not the elaborate spinings of class-warfare conception. They are clean, hard-hitting, practical American ways to a wholesome result.

"Violent swings in the business cycle are not as certain as death or taxes," he continued. "Nor are they as inexorable as the law of gravity. They are man made; and being made by man, they can be controlled by man.

"It is indeed cowardly to conclude that man is doomed to be the victim of his own business arrangements and that he is powerless to do anything about it. . . .

"The factors which bear on that problem are varied and complex; they touch all phases in the life of society. There is no easy or ready answer to the problem. Labour knows this. . . .

"The Communists miss the point of history when they make class warfare the challenge of this age. That is not the challenge. The challenge is more subtle and more demanding. The challenge is to make the modern industrial plant operate smoothly and productively for the benefit of all.

"This is not a job for one group alone. No one group has the technical competence, the know-how, the experience to go it all alone. It is, indeed, a joint responsibility of labour and management to see the modern industrial plant serves the needs of the public. The challenge is so fundamental that the survival of the democratic scheme of things may depend on the manner in which we respond.

"The power labour has today constitutes a great leverage on our economy. The power it holds in the council of nations will become increasingly great. Responsibility inevitably follows power. When the power is one over society and its welfare, the power is indeed a power in trust. So it is that labour, no less than management, has an obligation that transcends narrow, selfish interests. It is an obligation to turn its energies and resourcefulness not to protect vested interests, not to seek some temporary advantage, but to promote every known device which will lead to maximum production and full employment."

Other Resolutions

Among other important resolutions adopted by the Convention were the following:—

re-affirming the CIO's policy of support to the United Nations and the European Recovery Program and condemning the Soviet Union's abuse of the veto power in the Security Council, as well as the organized opposition to ERP by the Soviet Union and its satellites;

pledging unalterable support to a "good Neighbour Policy toward the peoples of the whole world;"

dedicating the CIO "and its entire membership" to obtaining a repudiation and repeal of the Taft-Hartley Act;

continuing and strengthening the CIO Political Action Committee;

demanding "full equal enjoyment of all the rights guaranteed in the Constitution of the United States, regardless of race, colour, creed, or national origin;"

declaring that "it is the continual objective of the CIO to build a high consumption level economy wherein wage-earners' real income is continually increasing;"

advocating a minimum wage of at least \$1 an hour;

calling for a roll-back of commodity prices and the establishment of price control on all commodities which basically affect the cost of living;

urging that income tax exemptions be raised to \$3,000 for married couples, \$1,500 for single persons, and \$600 for each dependent;

embarking on a vigorous campaign to secure pension, health and welfare benefits through collective bargaining;

urging improvement of social security legislation;

approving the efforts of affiliated unions to have guaranteed minimum annual wages incorporated in collective bargaining agreements;

calling for closer co-operation among the organized labour movements of the western hemisphere;

demanding the revision of the Displaced Persons Act of 1948, to provide for the admission of 100,000 displaced persons a year for four years;

supporting legislation that will eliminate harmful child labour in factories, fields and service industries;

urging legislation to provide for public housing, slum clearance, urban re-development, farm housing, and for a study of ways and means of reducing housing costs;

calling for legislation for the adequate control of rents and evictions and proper safeguards for both landlords and tenants;

favouring various measures for the welfare of farmers, including price supports and rural electrification;

the taking of steps immediately "to use all available production facilities to speed the attainment of the minimum goal of two million additional homes per year. . . ."

supporting the TVA and other river valley developments;

urging civil rights legislation, including passage of an anti-poll tax bill, a Fair Employment Practices Commission bill, an anti-lynching bill, and elimination of segregation in the Armed Forces.

Election of Officers

President: Philip Murray.

Vice-Presidents: L. S. Buckmaster, Joseph Curran, Albert J. Fitzgerald, John Green, Allan S. Haywood, Walter P. Reuther, Emil Rieve, Frank Rosenblum, and O. A. Knight.

Secretary-Treasurer: James B. Carey.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

INDUSTRIAL RELATIONS AND CONCILIATION

A number of agreements covering officers on deepsea ships were reached in November but the dispute affecting unlicensed seamen remained critical. Events of interest also occurred in the longshore industry.

Introduction

Two closely associated industries, deepsea shipping and longshoring, shared the spotlight among the situations which received the attention of the Industrial Relations Branch of the Department of Labour during the month of November.

The Minister of Labour announced the settlement of two disputes involving ships' officers as a result of mediation by conciliation officers appointed by him under the provisions of Section 16 of the Industrial Relations and Disputes Investigation Act. One of these disputes involved Canadian National (West Indies) Steamships, Ltd., and the deck and engineer officers employed on its *Lady* boats and smaller vessels, while the other affected radio officers aboard the ocean-going vessels of six West Coast shipping companies. Details of the settlements are summarized elsewhere in this article.

The renewal of a collective agreement as a result of direct negotiations between the Canadian Merchant Service Guild, Inc., and dry cargo shipping companies on both coasts was also reported to the Department. The agreement affects approximately 450 deck officers employed aboard ocean-going vessels and some twenty-one companies belonging to the Shipping Federation of Canada, Inc., and the Shipowners' Association (Deep Sea) of British Columbia. The only substantial change embodied in the new agreement related to working conditions on security watches.

No settlement was reached in the highly contentious dispute between East and West coast associations of shipping operators and the Canadian Seamen's Union representing the unlicensed crew members of ocean-going dry cargo vessels. The Conciliation Board under the chairmanship of Hon. Mr. Justice J. O. Wilson, of Vancouver, held a number of hearings at Montreal during the month

and made some progress towards clarification of the conflicting points of view of the parties. The Board was compelled to adjourn on November 26 to permit the Chairman to carry out certain judicial duties, but is expected to reconvene in January.

The strike of longshoremen in the United States which tied up most of the foreign shipping of that country during November had repercussions in Canada when a number of vessels destined for Atlantic ports of the United States were diverted to Halifax. Largely as a result of the decision of the officers and members of the Halifax Longshoremen's Association, Local 269, International Longshoremen's Association, in honouring their agreement with the steamship and stevedoring companies pending a clarification of their position through arbitration, and the assistance of an Industrial Relations Officer of the Federal Department of Labour, no serious delays occurred in the loading or discharging of vessels. A report of the situation in greater detail is given in another part of this article.

In the inland shipping industry the Minister of Labour referred to the Canada Labour Relations Board complaints made to him under Section 43 of the Industrial Relations and Disputes Investigation Act by the Canadian Seamen's Union against each of the Sarnia Steamships, Limited, Colonial Steamships, Limited, Canada Steamship Lines, Limited, and Northwest Steamships, Limited. In each case, the union alleged that the company had failed to bargain with the union in compliance with Section 15 (a) of the Industrial Relations and Disputes Investigation Act.

The Board dismissed these complaints and issued Reasons for Judgment which are printed elsewhere in this section.

Another development of more than usual interest was the certification by the Canada Labour Relations Board of Local No. 1739 of the International Longshoremen's Association as bargaining agent on behalf of longshoremen employed by a number of shipping and stevedoring companies at the Port of Quebec. The action was expected to put an end to a lengthy period of uncertainty and confusion as to the representation of the longshore workers for collective bargaining purposes. The last

recognized bargaining agency of the men who "work" the deepsea ships plying into the historic port was the Quebec Ship-labourers' Benevolent Society, an organization whose founding in 1857 made it one of the oldest labour organizations on the continent. The last agreement between the employers and the Benevolent Society was cancelled in the fall of 1947.

The text of the new Industrial Relations and Disputes Investigation Regulations, and of the Rules of Procedure of the Canada Labour Relations Board, is printed beginning on page 55.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the wartime Regulations in 1944.

Proceedings begun under the wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to admin-

ister provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements, and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; an officer stationed in Winnipeg covers the province of Saskatchewan and Manitoba and Northwestern Ontario; two officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of November. During the month, the Board received seven applications, held two hearings, issued four certificates designating bargaining agents, ordered two representation votes, and issued Reasons for Judgment in four cases.

Applications for Certification Granted

1. Canadian Seamen's Union for a unit of employees of the Canadian Pacific Railway Company, Great Lakes Steamship Service, comprising the unlicensed personnel employed in the deck and engine-room departments of the ss. *Assiniboia*, ss. *Keewatin* and ss. *Manitoba*.

2. Canadian Brotherhood of Railway Employees and Other Transport Workers for a unit of employees of the Canadian Pacific Transport Company, Limited, comprising the classifications of pick-up and delivery driver, warehouseman, helper, highway driver and mechanic employed in the operations of the Company in the Province of Manitoba and employed in the operations of the Company in the Province of Saskatchewan. Employees of Dench of Canada, Limited, a company carrying on auxiliary operations under contract, were excluded from the bargaining unit.

3. International Longshoremen's Association for a unit of employees of Albert G. Baker, Limited; Alcoa Steamship Company, Inc.; Anglo-Canadian Pulp and Paper Mills, Limited; Canadian Import Company, Limited; Canadian National Steamships; Canadian Pacific Steamships, Limited; County Line, Limited; Cunard White Star, Limited; Furness, Withy and Company, Limited; and William G. McCauley, all of the City of Quebec, Quebec, comprising longshoremen and hatchmen engaged in the loading and unloading of ocean-going ships.

4. Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 279, for a unit of employees of the Ottawa Transportation Commission, Ottawa, Ont., comprising employees engaged on an hourly or daily wage as street car operators, bus operators, car house employees, track department employees, line department employees, power plant employees, car service employees and bus garage employees. The managerial and clerical staffs, depart-

ment heads, foremen and uniformed car and bus service inspectors were excluded from the bargaining unit.

Representation Votes Ordered

1. National Association of Marine Engineers of Canada, Inc., and Canadian Pacific Steamships, Limited (L.G., Nov., 1948, p. 1239). Following an investigation of the application, the Board ordered a representation vote of officers employed on the D.E.V. *Beaverbrae*, of the Canadian Pacific Steamships, Limited, Montreal, Quebec, classified as engineer officers, sanitary engineer, chief electrician and electricians, excluding the chief engineer. (Mr. R. Trepanier, Returning Officer.)

2. Canadian Seamen's Union and The Prescott and Ogdensburg Ferry Company, Limited, Prescott, Ontario (L.G., Nov., 1948, p. 1239). Following an investigation of the application and a public hearing, the Board ordered a representation vote among the unlicensed personnel on board the ss. *Dubrule* and ss. *Levis* (Mr. J. L. MacDougall, Returning Officer.)

Applications for Certification Received During the Month of November, 1948

1. Brotherhood of Railroad Trainmen, Local 1005, on behalf of yardmasters of the National Harbours Board at the Port of Montreal, Quebec. (Mr. R. Trepanier, Investigating Officer.)

2. Sudbury General Workers' Union (CCL), on behalf of bus drivers, garage mechanics, helpers and labourers of Eastern Canadian Greyhound Lines, Limited (Sudbury Division), Sudbury, Ontario. (Mr. B. Wilson, Investigating Officer.)

3. Transport Drivers, Warehousemen and Helpers, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of chauffeurs, chauffeurs' helpers and mechanics of Taggart's Service, Limited, Ottawa, Ontario. (Mr. L. Pepin, Investigating Officer.)

4. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of clerical employees in the General Office, Angus Shop Stores of the Canadian Pacific Railway Company, Montreal, Quebec. (Mr. R. Trepanier, Investigating Officer.)

5. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of news agents on trains of the Canadian Pacific Railway Company, operating out of Saint John, New Brunswick; Montreal, Quebec; Toronto, Ontario; Winnipeg, Manitoba; Calgary, Alberta; and Vancouver, British Columbia. (Mr. R. Trepanier, Investigating Officer.)

6. Federation of Telephone Workers of British Columbia on behalf of plant, traffic and clerical employees of the British Columbia Telephone Company, Vancouver, British Columbia. (Mr. G. R. Currie, Investigating Officer.)

7. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of chauffeurs and chauffeurs' helpers employed by Desrosiers Cartage Company,

Inc., Ville St. Pierre, Quebec, at its terminals in Ottawa and Montreal. (Mr. L. Pepin, Investigating Officer.)

Reasons for Judgment Issued by the Canada Labour Relations Board

The Minister of Labour referred to the Board complaints made to him under Section 43 of the Industrial Relations and Disputes Investigation Act by the Canadian Seamen's Union against each of the Sarnia Steamships, Limited, Colonial Steamships, Limited, Canada Steamship Lines, Limited, and Northwest Steamships, Limited. In each case, the union alleged that the company had failed to bargain with the union in compliance with Section 15 (a) of the Industrial Relations and Disputes Investigation Act.

The Board dismissed these complaints and issued the following Reasons for Judgment:—

REASONS FOR JUDGMENT in dispute between

Canadian Seamen's Union, Complainant,
and

Canada Steamships Lines Limited, Respondent,
and

Northwest Steamships Limited, Respondent.

Under Section 43 of the Industrial Relations and Disputes Investigation Act, the Minister of Labour has referred to this Board complaints made to him under the provisions of the said section by the Canadian Seamen's Union against each of Canada Steamship Lines Limited and Northwest Steamships Limited, alleging in each case the failure of the Company to bargain with the Union in compliance with paragraph (a) of Section 15 of the Industrial Relations and Disputes Investigation Act.

The complaint thus received by the Minister and referred to the Board for consideration, in the case of Canada Steamship Lines Limited, reads as follows:—

We write you on behalf and in the name of the Canadian Seamen's Union. The Canadian Seamen's Union has been for many years a contracting party to a collective agreement with the Canada Steamship Lines Limited, and in particular, entered into a collective agreement with this Company on September 3, 1946, which agreement had a term expiring on December 31, 1947.

This collective agreement made it obligatory upon the parties to enter into negotiations with a view to concluding a new collective agreement upon its expiration, if one of the parties thereto give notice to this effect to the other. This obligation was, of course, likewise incumbent upon the parties, in virtue of

The Board consisted of the Acting Chairman and Messrs. Best, Complin, Hills, Mosher and Picard.

provisions of Order in Council P.C. 1003 of the Wartime Labour Relations Regulations.

On October 27, 1947, and again on November 24, 1947, the Union gave notice to the Company of its desire to enter into negotiations to conclude a new or amended collective agreement to replace the one expiring on December 31, 1947. The Company refused and neglected to comply with these notices. Upon the failure of the Company to so carry out its obligations imposed upon it both by contract and by law, the Union sought and obtained the conciliation services of your Department, as provided by the Wartime Labour Relations Regulations, and in due course exercising your powers under the said Regulations, you appointed as Industrial Dispute Inquiry Commissioners, Messrs. Leonard W. Brockington, K.C., of Ottawa, and Douglas MacNish, K.C., of Toronto, to investigate the dispute and to report to you.

The Commissioners reported to you on 7th day of June, 1948, and their report characterizes in no uncertain terms the studied refusal and neglect of the Company to enter into negotiations with the Union and its consistent and flagrant violations of its legal and contractual duties.

The Company, to this day, persists in its refusal and neglect to enter into negotiations with the Union, with a view to concluding the collective agreement and has therefore failed to comply with paragraph (a) Section 15 of the Industrial Relations and Disputes Investigation Act.

This complaint is made to you in virtue of Section 43 of the said Act, and we request that in accordance with the provisions of the said Act, you refer this complaint to the Canada Labour Relations Board for inquiry and appropriate action.

We trust this matter will receive your immediate attention.

The terms of the complaint of the Union against Northwest Steamships Limited are identical in every respect.

Section 43 of the Industrial Relations and Disputes Investigation Act reads as follows:—

43. (1) Where the Minister receives a complaint in writing from a party to collective bargaining that any other party to such collective bargaining has failed to comply with paragraph (a) of section fourteen of this Act or with paragraph (a) of section fifteen of this Act, he may refer the same to the Board.

(2) Where a complaint from a party to collective bargaining is referred to the Board pursuant to subsection one of this section, the Board shall inquire into the complaint and may dismiss the complaint or may make an order requiring any party to such collective bargaining to do such things as in the opinion of the Board are necessary to secure compliance with paragraph (a) of section fourteen or paragraph (a) of section fifteen of this Act.

(3) Every employer, employers' organization, trade union or other person in respect of whom an order is made under this section, shall comply with such order.

Paragraph (a) of Section 15, which the Union alleges the Company has contravened, provides:—

15. Where a party to a collective agreement has given notice under section thirteen of this Act to the other party to the agreement

(a) the parties shall, without delay, but in any case within twenty clear days after the notice was given or such further time as the parties may agree upon, meet and commence or cause authorized representatives on their behalf to meet and commence to bargain collectively and make every reasonable effort to conclude a renewal or revision of the agreement or a new collective agreement.

Section 13 provides:—

13. Either party to a collective agreement, whether entered into before or after the commencement of this Act, may, within the period of two months next preceding the date of expiry of the term of, or preceding termination of the agreement, by notice, require this other party to the agreement to commence collective bargaining with a view to the renewal or revision of the agreement or conclusion of a new collective agreement.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948, and replaces the Wartime Labour Relations Regulations, P.C. 1003, of February 17, 1944, which was revoked on the date the Act came into force. In its main features the Act represents a revision of the Wartime Labour Relations Regulations. Provision for continuation of proceedings under the Act which were pending under the Regulations at the date of revocation, and for the recognition under the Act of certifications and other decisions made under the Regulations, is contained in Section 72 of the Act, which reads in part as follows:—

72. (1) The Canada Labour Relations Board established by this Act shall be the successor of the Wartime Labour Relations Board established by order of His Excellency the Governor General in Council of the seventeenth day of February, one thousand nine hundred and forty-four, as amended from time to time, and the said order, as amended, shall be deemed to have been revoked on the coming into force of this Act, and all acts and things done and matters and proceedings commenced by the said Wartime Labour Relations Board under the said order, as amended, shall, in so far as the said matters and proceedings are within the authority of the Canada Labour Relations Board established by this Act, be continued by the Canada Labour Relations Board under this Act.

(2) Every regulation, order, decision or determination or any other act or thing, made, given or done by or on behalf of the Wartime Labour Relations Board or by the Minister or by any other person under the order of His Excellency the Governor General in Council mentioned in subsection one of this section, shall in so far as the said regulation, order, decision, determination, act or thing might be done under this Act, be deemed to have been made, given or done by the Canada Labour Relations Board or the Minister or such other person under this Act.

The Board is confronted initially with the fact that the actions and alleged defaults which form the basis of the complaints transpired several months prior to the date when the Act came into force and during a period while the Wartime Labour Relations Regulations were in force.

The notices given in October and November, 1947, by the Union, in each case, to require the Company to bargain collectively with it for the renewal or revision of the agreement expiring on December 31, 1947, were given pursuant to the provisions of subsection (1) of Section 16 of the Wartime Labour Relations Regulations, which provided:—

(1) Either party to a collective agreement may on ten days' notice require the other party to enter into negotiations for renewal of the agreement within the period of two months prior to the expiry

date, and both parties shall thereupon enter into such negotiations in good faith and make every reasonable effort to secure such a renewal.

Subsequently, the Union invoked the conciliation procedures provided by the Regulations. Following the unsuccessful result of these proceedings, the Union applied to and obtained the consent of the Wartime Labour Relations Board to the prosecution of the Company under the Regulations for its alleged failure to comply with subsection (1) of Section 16 of the Regulations.

Counsel for the Company advised this Board, in the course of the preliminary argument on this complaint, that these charges are still pending and undisposed of before the Court at Montreal, Quebec.

Subsequent to the laying of the charges, the Union declared a strike of employees of the Company whom it was representing for collective bargaining. Counsel for the Union in his written argument to the Board makes the following statement on this point:—

The Union, having exhausted all recourse of negotiation and conciliation given it by P.C. 1003 on June 5, 1948, it called a strike of the unlicensed personnel of each of the companies. These strikes are in force and continue to the present date.

After having taken all the foregoing measures while the Wartime Labour Relations Regulations were in force, the Union seeks, several months later and while the strike is in progress, to invoke the provisions of Section 43 of the Act. There was no corresponding provision in the Wartime Labour Relations Regulations. It will be observed that the complaints relate back to notices to bargain given by the Union to the Company, in each case, pursuant to and while the Wartime Labour Relations Regulations were in effect.

Counsel for the applicant submits that Section 43 merely provides a new method of procedure for enforcing a right or obligation created by the Regulations and which may be enforced under the Act replacing the Regulations in accordance with the procedure provided by that section.

It is a fundamental rule of English law that no statute shall be construed to have a retrospective operation unless such construction appears very clearly in the terms of the Act or arises by necessary and distinct implications but an exception to this general rule is recognized in that alterations in procedure are retrospective unless there be some good reason against it. (See Maxwell on *Interpretation of Statutes*, 9th Edition, pages 221, 233.)

In distinguishing what constitutes an alteration in procedure as distinguished from the granting of a new substantive or remedial right, in *Upper Canada College v. Smith*, 57 D.L.R. 655, Duff J. in referring to statutory provisions granting a right of appeal, said at pp. 655-656:—

A right of appeal is, of course, a remedial right here. . . . If such statutes are to be regarded as regulating procedure only within the meaning of this rule, then, *prima facie*, their application would not be restricted to proceedings subsequently instituted. Speaking broadly, the courts have persistently refused to take this view of such statutes: they have almost uniformly been held not to fall within the category of statutes relating to procedure only. . . .

In *Rex v. Sansoucey* (1948) Ex. C.R. p. 399, Thorson J. at page 406 said:—

When the Act of 33 Henry VIII, Chapter 39, authorized the issue of Writs of Extent for the recovery of the King's debts it conferred a right upon the Crown which did not previously exist. This was not a matter of practice and procedure but a substantive right. The right to issue the writ must be distinct from the practice and procedure regulating its issue.

In the opinion of the Board, Section 43 creates a new remedial right which, following the general rule, should not be construed to have retroactive operation. Apart from this, it will be observed that the terms of Section 43 limit its application explicitly to an alleged failure to comply with paragraph (a) of Section 14 or paragraph (a) of Section 15 of the Act, and that the provisions of paragraph (a) of Section 15 refer in turn to notice given under Section 13 of the Act. The Board cannot infer from the provisions of Section 43 and the other relevant sections any intent that the section should have retroactive application to notices given and defaults which occurred prior to the date of the Act.

In consequence, any order or direction which the Board might make against any party to this complaint would be invalid and incapable of enforcement.

The provisions of Section 72 of the Act do not appear to the Board to have any application to these complaints.

For the above reasons the complaints are dismissed.

A. H. BROWN,
Vice-Chairman
and Acting Chairman
for the Board.

Mr. A. MARCUS,
for the Complainant.

Mr. J. A. MATHEWSON, K.C.,
for the Respondent.

Dated at Ottawa, November 17, 1948.

REASONS FOR JUDGMENT in dispute between

**Canadian Seamen's Union, Complainant,
and
Sarnia Steamships Limited, Respondent,
and
Colonial Steamships Limited, Respondent.**

Under Section 43 of the Industrial Relations and Disputes Investigation Act, the Minister of Labour has referred to this Board complaints made to him under the provisions of the said section by the Canadian Seamen's Union against each of the Sarnia Steamships Limited and Colonial Steamships Limited, alleging in each case the failure of the Company to bargain with the Union in compliance with paragraph (a) of Section 15 of the Industrial Relations and Disputes Investigation Act.

The complaint thus received by the Minister and referred to the Board for consideration, in the case of the Sarnia Steamships Limited, reads as follows:—

We write you on behalf and in the name of the Canadian Seamen's Union. The Canadian Seamen's Union has been for many years a contracting party to a collective agreement with the Sarnia Steamships Limited, and in particular, entered into a collective agreement with this Company on September 3, 1946, which agreement had a term expiring on December 31, 1947.

This collective agreement made it obligatory upon the parties to enter into negotiations with a view to concluding a new collective agreement upon its expiration, if one of the parties thereto give notice to this effect to the other. This obligation was, of course, likewise incumbent upon the parties, in virtue of provisions of Order in Council P.C. 1003 of the Wartime Labour Relations Regulations.

On October 27, 1947, and again on November 24, 1947, the Union gave notice to the Company of its desire to enter into negotiations to conclude a new or amended collective agreement to replace the one expiring on December 31, 1947. The Company refused and neglected to comply with these notices. Upon the failure of the Company to so carry out its obligations imposed upon it both by contract and by law, the Union sought and obtained the conciliation services of your Department, as provided by the Wartime Labour Relations Regulations, and in due course exercising your powers under the said Regulations, you appointed as Industrial Dispute Inquiry Commissioners, Messrs. Leonard W. Brockington, K.C., of Ottawa, and Douglas MacNish, K.C., of Toronto, to investigate the dispute and to report to you.

The Commissioners reported to you on the 23rd day of April, 1948, and their report characterizes in no uncertain terms the studied refusal and neglect of the Company to enter into negotiations with

The Board consisted of the Acting Chairman and Messrs. Best, Complin, Hills, Mosher and Picard.

the Union and its consistent and flagrant violations of its legal and contractual duties.

The Company, to this day, persists in its refusal and neglect to enter into negotiations with the Union, with a view to concluding the collective agreement and has therefore failed to comply with paragraph (a) Section 15 of the Industrial Relations and Disputes Investigation Act.

This complaint is made to you in virtue of Section 43 of the said Act, and we request that in accordance with the provisions of the said Act, you refer this complaint to the Canada Labour Relations Board for inquiry and appropriate action.

We trust this matter will receive your immediate attention.

The terms of the complaint of the Union against Colonial Steamships Limited are identical in every respect.

Section 43 of the Industrial Relations and Disputes Investigation Act reads as follows:—

43. (1) Where the Minister receives a complaint in writing from a party to collective bargaining that any other party to such collective bargaining has failed to comply with paragraph (a) of section fourteen of this Act or with paragraph (a) of section fifteen of this Act, he may refer the same to the Board.

(2) Where a complaint from a party to collective bargaining is referred to the Board pursuant to subsection one of this section, the Board shall inquire into the complaint and may dismiss the complaint or may make an order requiring any party to such collective bargaining to do such things as in the opinion of the Board are necessary to secure compliance with paragraph (a) of section fourteen or paragraph (a) of section fifteen of this Act.

(3) Every employer, employers' organization, trade union or other person in respect of whom an order is made under this section, shall comply with such order.

Paragraph (a) of Section 15, which the Union alleges the Company has contravened, provides:—

15. Where a party to a collective agreement has given notice under section thirteen of this Act to the other party to the agreement

(a) the parties shall, without delay, but in any case within twenty clear days after the notice was given or such

further time as the parties may agree upon, meet and commence or cause authorized representatives on their behalf to meet and commence to bargain collectively and make every reasonable effort to conclude a renewal or revision of the agreement or a new collective agreement.

Section 13 provides:—

13. Either party to a collective agreement, whether entered into before or after the commencement of this Act, may, within the period of two months next preceding the date of expiry of the term of, or preceding termination of the agreement, by notice, require the other party to the agreement to commence collective bargaining with a view to the renewal or revision of the agreement or conclusion of a new collective agreement.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948, and replaces the Wartime Labour Relations Regulations, P.C. 1003, of February 17, 1944, which was revoked on the date the Act came into force. In its main features the Act represents a revision of the Wartime Labour Relations Regulations. Provision for continuation of proceedings under the Act which were pending under the Regulations at the date of revocation, and for the recognition under the Act of certifications and other decisions made under the Regulations, is contained in Section 72 of the Act, which reads in part as follows:—

72. (1) The Canada Labour Relations Board established by this Act shall be the successor of the Wartime Labour Relations Board established by order of His Excellency the Governor General in Council of the seventeenth day of February, one thousand nine hundred and forty-four, as amended from time to time, and the said order, as amended, shall be deemed to have been revoked on the coming into force of this Act, and all acts and things done and matters and proceedings commenced by the said Wartime Labour Relations Board under the said order, as amended, shall, in so far as the said matters and proceedings are within the authority of the Canada Labour Relations Board established by this Act, be continued by the Canada Labour Relations Board under this Act.

(2) Every regulation, order, decision or determination or any other act or thing, made, given or done by or on behalf of the Wartime Labour Relations Board or by the Minister or by any other person under the order of His Excellency the Governor General in Council mentioned in subsection one of this section, shall, in so far as the said regulation, order, decision, determination, act or thing might be done under this Act, be deemed to have been made, given or done by the Canada Labour Relations Board or the Minister or such other person under this Act.

The Board is confronted initially with the fact that the actions and alleged

defaults which form the basis of the complaints transpired several months prior to the date when the Act came into force and during a period while the Wartime Labour Relations Regulations were in force.

The notices given in October and November, 1947, by the Union, in each case, to require the Company to bargain collectively with it for the renewal or revision of the agreement expiring on December 31, 1947, were given pursuant to the provisions of subsection (1) of Section 16 of the Wartime Labour Relations Regulations, which provided:—

(1) Either party to a collective agreement may on ten days' notice require the other party to enter into negotiations for renewal of the agreement within the period of two months prior to the expiry date, and both parties shall thereupon enter into such negotiations in good faith and make every reasonable effort to secure such a renewal.

Subsequently, the Union invoked the conciliation procedures provided by the Regulations. Following the unsuccessful result of these proceedings, the Union applied to and obtained the consent of the Wartime Labour Relations Board to the prosecution of the Company under the Regulations for its alleged failure to comply with subsection (1) of Section 16 of the Regulations. Charges were laid by the Union against the Company but were subsequently withdrawn after a part of the evidence for the prosecution had been taken.

Subsequent to the laying of the charges, the Union declared a strike of employees of the Company whom it was representing for collective bargaining. Counsel for the Union in his written argument to the Board makes the following statement on this point:—

The Union, having exhausted all recourse of negotiation and conciliation given it by P.C. 1003 on June 5, 1948, it called a strike of the unlicensed personnel of each of the companies. These strikes are in force and continue to the present date.

After having taken all the foregoing measures while the Wartime Labour Relations Regulations were in force, the Union seeks, several months later and while the strike is in progress, to invoke the provisions of Section 43 of the Act. There was no corresponding provision in the Wartime Labour Relations Regulations.

It will be observed that the complaints relate back to notices to bargain given by the Union to the Company, in each case pursuant to and while the Wartime Labour Relations Regulations were in effect.

Counsel for the applicant contends that Section 43 merely provides a new method of procedure for enforcing a right or obligation created by the Wartime Labour Relations Regulations and which may be enforced under the Act replacing the Regulations in accordance with the procedure provided by Section 43.

It is a fundamental rule of English law that no statute shall be construed to have a retrospective operation unless such construction appears very clearly in the terms of the Act or arises by necessary and distinct implication but an exception to this general rule is recognized in that alterations in procedure are construed to have retrospective operation unless there be some good reason against it. (See Maxwell on *Interpretation of Statutes*, 9th Edition, pages 221, 233.)

In distinguishing what constitutes an alteration in procedure from the granting of a new substantive or remedial right, in *Upper Canada College v. Smith*, 57 D.L.R. 655, Duff J. in referring to statutory provisions granting a right of appeal, said at pp. 655-656:—

A right of appeal is, of course, a remedial right here.

If such statutes are to be regarded as regulating procedure only within the meaning of this rule, then, *prima facie*, their application would not be restricted to proceedings subsequently instituted. Speaking broadly, the courts have persistently refused to take this view of such statutes: they have almost uniformly been held not to fall within the category of statutes relating to procedures only . . .

In *Rex v. Sansoucey* (1948) Ex. C.R. p. 399, Thorson, J. at page 406 said:—

When the Act of 33 Henry VIII, Chapter 39, authorized the issue of Writs of Extent

for the recovery of the King's debts it conferred a right upon the Crown which did not previously exist. This was not a matter of practice and procedure but a substantive right. The right to issue the writ must be distinct from the practice and procedure regulating its issue.

In the opinion of the Board, Section 43 creates a new remedial right which, following the general rule, should not be construed to have retroactive operation. Apart from this, it will be observed that the terms of Section 43 limit its application explicitly to an alleged failure to comply with paragraph (a) of Section 14 or paragraph (a) of Section 15 of the Act, and that the provisions of paragraph (a) of Section 15 refer in turn to a notice given under Section 13 of the Act. The Board cannot infer from the provisions of Section 43 and the other relevant sections any intent that the section should have application to notices given and defaults which occurred prior to the date of the Act. In consequence, any order or direction which the Board might make against any party to this complaint would be invalid and incapable of enforcement.

The provisions of Section 72 of the Act do not appear to the Board to have any application to these complaints.

For the above reasons the complaints are dismissed.

A. H. BROWN,
Vice-Chairman
and Acting Chairman
for the Board.

Mr. A. MARCUS,
for the Complainant.

Mr. F. WILKINSON, K.C.,
for the Respondents.

Dated at Ottawa, November 17, 1948.

Conciliation and Other Proceedings Before the Minister of Labour

Appointment of Conciliation Officers

During November, 1948, the Minister of Labour appointed Conciliation Officers under Section 16 of the Industrial Relations and Disputes Investigation Act to confer with the parties involved in three industrial disputes. The parties affected by the disputes were:—

(1) Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, and Northwest Airlines, Inc., Edmonton, Alta,

respondent. (R. H. Hooper, Conciliation Officer.)

(2) Brotherhood of Railroad Trainmen, Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen, applicants, and Temiscouata Railway Company, Rivière du Loup, P.Q., respondent. (L. Pepin, Conciliation Officer.)

(3) National Association of Marine Engineers of Canada, Inc., applicant, and National Harbours Board, Montreal, P.Q., respondent. (R. Trepanier, Conciliation Officer.)

Agreements Facilitated by Conciliation Officers

(1) On November 23, 1948, the Minister of Labour received a report from Mr. R. Trepanier, Conciliation Officer, indicating the settlement of matters in dispute between the Canadian Merchant Service Guild, Inc., and the National Association of Marine Engineers of Canada, Inc., and the Canadian National (West Indies) Steamships, Limited. The dispute affected deck and engineroom officers employed aboard the *Lady* vessels and smaller ships operated by the Company. Demands for a general increase in wages were dropped by the unions representing the employees, and a collective agreement was executed by the parties on November 22, 1948, providing for an increase in pay from \$6 to \$8 per night when officers are required to remain on duty all night in home ports after already having done a day's work; an increase from twenty-one to thirty days in annual leave; increases from \$3 to \$3.50 in subsistence and lodging allowances for men on "standby" wages, and adjustments in regard to sick leave and compensation for loss of personal effects through marine disaster.

2. On November 24, 1948, the Minister of Labour received a report from Mr. G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between the Alberta Wheat Pool and the employees of its terminal elevators at Vancouver, B.C., as represented by the United Grain Elevator Workers' Union, Local 501 (CIO-CCL), affiliated with the Retail, Wholesale and Department Store Union of America. The main feature of the settlement was a wage increase of 12½ cents per hour for hourly-rated employees and \$20 per month for monthly-rated employees.

3. On November 24, 1948, the Minister of Labour received a report from Mr. G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between six deepsea dry cargo shipping companies operating from West Coast ports and the Marine Department of the Canadian Communications Association, Local No. 4, Pacific (ACA-CIO-CCL). The companies involved were the Canadian Union Line, Ltd., Canadian Transport Company, Ltd., Johnson-Walton Steamships, Ltd., Kerr-Silver Lines (Canada) Ltd., Vancouver-Oriental Line, Ltd., and Western Canada Steamship Co., Ltd. The settlement was based on the companies' offer to renew the former agreement with the addition of a clause providing that work on six specified

holidays at sea be confined to that usually performed on Sundays, and that when Radio Officers are required to work on such holidays in port they will receive compensatory time off. Demands for a general wage increase were dropped.

Conciliation Boards Appointed

1. On November 4, 1948, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between the Temiscouata Railway Company and the Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL). The Board was appointed following receipt of the report of Liguori Pepin, Conciliation Officer (L.G., Dec., 1948, p. 1413). The Board was fully constituted on November 30 with the appointment of J. H. Stitt, Ottawa, as Chairman, in the absence of a joint recommendation from the other two members of the Board, George Hodge, Montreal, and A. A. Andras, Ottawa. Mr. Andras had previously been appointed to the Board on the nomination of the union and Mr. Hodge in the absence of a nomination from the company.

2. On November 15, 1948, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between the Prescott and Ogdensburg Ferry Company, Limited, and the Canadian Navigators' Federation. The Board was appointed following receipt of the report of F. J. Ainsborough, Conciliation Officer (L.G., Dec., 1948, p. 1413). Constitution of the Board had not been completed at the end of the month.

Other Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation appointed to deal with a dispute between the United Towing and Salvage Company, Limited, and the Canadian Seamen's Union (TLC) (L.G., Dec., 1948, p. 1413) was fully constituted on November 16, 1948, with the appointment of Andre Montpetit, Montreal, as Chairman of the Board. Mr. Montpetit was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, J. E. Mullally and I. R. Prazoff, both of Montreal, who had previously been appointed on the nomination of the company and the union, respectively.

2. The Board of Conciliation and Investigation appointed to deal with a dispute between various east and west coast deep-

sea dry cargo shipping companies, represented by the Shipping Federation of Canada, Inc., and the Shipowners' Association (Deepsea) of British Columbia, and the Canadian Seamen's Union (TLC) (L.G., Dec., 1948, p. 1413) was fully constituted on November 16, 1948, with the appointment of the Hon. Mr. Justice J. O. Wilson, of the Supreme Court of British Columbia, Vancouver, as Chairman of the Board. Mr. Justice Wilson was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Theodore Meighen, K.C., and John Kerry, K.C., both of Montreal, who had previously been appointed on the nomination of the companies and the union, respectively.

Settlement Following Board Procedure

During November, advice was received that matters in dispute between the Ottawa Light, Heat and Power Company, Limited, and its employees who are represented by Local B1440, International Brotherhood of Electrical Workers (AFL-TLC) had been settled as a result of further negotiations following receipt by the parties of the report

of the Conciliation Board which dealt with the dispute (L.G., Dec., 1948, p. 1413).

Complaint Under Section 44, Industrial Relations and Disputes Investigation Act

The Minister of Labour has received a complaint made to him under Section 44 of the Industrial Relations and Disputes Investigation Act by the Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, against Maislin Brothers, Montreal, Quebec (L.G., Dec., 1948, p. 1410).

Application for Consent to Prosecute

The Minister has received the following application for consent to prosecute under Section 46, of the Industrial Relations and Disputes Investigation Act:—

Mr. Adam George Anderson, a member of Lodge 477, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, against Mr. Charles Day, a member of Division 66, Canadian Brotherhood of Railway Employees and Other Transport Workers.

Conciliation and Other Proceedings Under the Conciliation and Labour Act

When a prolonged strike by members of the International Longshoremen's Association in the United States resulted in a complete tie-up of ocean-going shipping in most of the Atlantic ports of that country during November, the diversion of a number of vessels from their American destinations to the Port of Halifax gave rise to a difficult and complex situation, in the solution of which an officer of the Department of Labour was called upon to play an active part.

Longshore work at the Port of Halifax is governed by a collective agreement between Local Union No. 269 of the International Longshoremen's Association and the Halifax Steamship Committee, which represents a group of fourteen shipping and stevedoring companies. Thus, the members of Local 269 were by reason of the diversion of ships from strike-bound ports in the United States placed in the awkward position of being torn between conflicting loyalties. As members of the same international union, they were sympathetic towards the striking longshoremen south of the border and unwilling to be regarded as strike breakers. On the

other hand, they were desirous of honouring the terms of their agreement with the Halifax Steamship Committee, a clause of which provides that "the Longshoremen's Association shall use all the power of its Organization to prevent irregularity of attendance at work, and to ensure that a sufficient supply of men shall hereafter be available."

Early reports on the situation reaching the Department of Labour indicated that on November 15 members of the local union decided to handle all ships whose regular destination was Halifax and to complete the unloading of partially discharged vessels which had been diverted from New York and other United States ports, but that they would not attend to any other ships so diverted. The following day a report was received that the union had altered its previous decision and would carry out its obligations to the shipping and stevedoring companies and handle cargoes on all ships going directly to Halifax from the port of loading.

On November 18 the Minister of Labour received a telegram from the heads of the

local union and the Halifax Steamship Committee stating that the executive officers of Halifax locals of the International Longshoremen's Association had been requested by the international president of the ILA to refuse to work on diverted ships or on vessels that customarily sail between Great Britain and American ports. The international president of the Longshoremen's Association had expressed the opinion that a refusal to work such ships on the part of the local union would not be a violation of its collective agreement, while the employers expressed a directly opposite opinion. In view of this, the parties jointly requested the appointment of a Conciliation Officer to investigate the situation and to advise the parties as to their obligations and responsibilities in the event that the union should refuse to make available a sufficient supply of men to work ships owned and operated by members of the Halifax Steamship Committee or for which its members are agents.

The Maritimes representative of the Industrial Relations Branch, who had already been closely in touch with the situation, conferred at once with the parties on direction of the Minister of Labour. He also furnished them with a written opinion that refusal by the union to supply men to work the ships owned and operated by, or for which members of the Halifax Shipping Committee are agents, would constitute a violation of the collective agreement as well as a violation of Section 22 (b) of the Industrial Relations and Disputes Investigation Act. He pointed out that the collective agreement also provided for the establishment of a committee to arbitrate any dispute as to the interpretation of any clause of the agreement, which could not otherwise be adjusted. Provisions of the Industrial Relations and Disputes Investigation Act requiring such disposition of disputes concerning the meaning or violation of an agreement were also brought to the attention of the parties.

The longshoremen continued to unload ships' cargoes, but controversy continued over the propriety of such action. On the afternoon of November 22 the executive committee of the local union decided that the men should not handle any ships diverted to Halifax from their regular routes pending a general meeting of the union's membership to determine the issue. A closed meeting of the longshoremen was held on November 24 at which it was agreed to unload all ships entering the port until the position of the union under the terms

of the collective agreement was clarified by a reference of the dispute to an Arbitration Committee.

The decision of the Arbitration Committee, couched in general terms, was made known on December 1. It confirmed the earlier opinion given by the Department's Industrial Relations Officer, but did not attempt to interpret the relevant provisions of the Industrial Relations and Disputes Investigation Act. In the meantime, a settlement of the dispute affecting the Atlantic ports of the United States had been reached, thus removing the need for the Committee's decision except in relation to similar disputes which might arise in future.

The full text of the report of the Arbitration Committee is reproduced below:—

In the matter of the arbitration under paragraph 54 of the working agreement, dated December 1, 1947, between certain steamship and stevedoring companies therein designated as "The Steamship Committee," of the one part, and Halifax Longshoremen's Association, Local 269, ILA, of the other part.

The Arbitration Committee appointed under paragraph 54 of the said working agreement hereby reports as follows:—

The Steamship Committee having called for arbitration under the provisions of said paragraph 54, selected C. B. Smith of Halifax as its representative on the Arbitration Committee, and Local 269, ILA selected James H. Dwyer of Halifax as its representative on the said Committee.

Mr. Smith and Mr. Dwyer met and jointly selected Mr. B. A. O'Leary of Halifax as Chairman of the Arbitration Committee, and Mr. O'Leary agreed to act in that capacity.

The Arbitration Committee thereupon met to consider and decide the questions submitted to them for determination.

It is the unanimous opinion of the Committee that the terms of reference do not require them to determine the application of the provisions of the Working Agreement to any specific set of facts, but that the questions for determination are simply these:—

1. If any dispute arises between the parties as to the effect of the Agreement, which cannot be adjusted between them, does paragraph 54 of the Working Agreement require the men to remain at work, without change in the conditions governing the work, pending the arbitration of the dispute?

2. Is the decision of the Arbitration Committee when given, whatever that decision may be, binding on both parties during the continuance of the Working Agreement?

The Arbitration Committee having given the matter the best consideration possible, have come to the conclusion that the answer to both these questions should be in the affirmative, and consequently that:—

1. If any dispute arises between the parties as to the effect of the Agreement, which cannot be adjusted between them, paragraph 54 of the Working Agreement requires the men to remain at work without change in the conditions governing

the work, pending the arbitration of the dispute.

2. The decision of the Arbitration Committee when given, whatever that decision may be, is binding on both parties during the continuance of the Working Agreement.

And we so decide.

Dated at Halifax, N.S., this 1st day of December, A.D. 1948.

Member.

Regulations Under Industrial Relations and Disputes Investigation Act

Reference was made in last month's LABOUR GAZETTE (p. 1343) to the adoption by Order in Council of the Industrial Relations and Disputes Investigation Regulations and of the Rules of Procedure of the Canada Labour Relations Board.

The Industrial Relations and Disputes Investigation Regulations lay down the procedure to be followed in dealing with the various matters which the Act places within the administrative jurisdiction of the Minister of Labour, including requests for the appointment of Conciliation Officers and Conciliation Boards, complaints that employers or trade unions or individuals have violated provisions of the Act, applications for the Minister's consent to prosecute parties alleged to have committed offences under the Act, and applications for the appointment of Industrial Inquiry Commissioners.

The Rules of Procedure of the Canada Labour Relations Board relate to those matters which fall within the administrative jurisdiction of the Board, including applications for the granting or revocation of certificates as bargaining agents, applications for the prescription of provisions for the final settlement of differences concerning the meaning or violation of collective agreements, and complaints alleging failure to bargain collectively which may be referred to the Board by the Ministers.

The text of the Regulations and of the Board Rules of Procedure follows:—

The Industrial Relations and Disputes Investigation Regulations

1. In these Regulations,

(a) "Act" means the Industrial Relations and Disputes Investigation Act;

(b) "Minister" means the Minister of Labour and includes the Deputy Minister of Labour;

(c) "party" includes a person, corporation, trade union, bargaining agent, employee, employers' organization or employer.

2. Any notice, request or complaint that may be given or made to the Minister by any party under the Act may be given or made to the Director of Industrial Relations, Department of Labour, Ottawa, Ontario, for the Minister, and may be given or sent by mail or may be left with the Director for the Minister.

3. (1) Where, under the Act or these Regulations, any notice or report is required or authorized to be given or sent by the Minister or a Conciliation Board or an Industrial Inquiry Commission to any party, the notice or report may be given or sent by mail addressed to that party at his place of business or usual abode or may be personally served upon or given to that party or in his absence may be left for that party with any person at his place of business or at his usual place of abode.

(2) Any notice or request authorized or required to be given or sent by the Minister to any party pursuant to the Act giving effect to or giving notice of any direction or decision of the Minister may be given or sent for him by the Director of Industrial Relations, Department of Labour, Ottawa, Ontario.

4. Service of any writ issued by the Canada Labour Relations Board or a Conciliation Board or an Industrial Inquiry Commission requiring any person to appear before the Canada Labour Relations Board, Conciliation Board or Industrial Inquiry Commission, as the case may be, to give evidence or to give evidence and to bring with him any documents in his possession or under his control, may be effected by personal service on the person to whom it is directed.

5. Any summons, warrant or writ to compel the attendance of a witness or other person before a court, judge or magistrate pursuant to the Act and any notice of appeal from any decision made under the Act by a court,

judge or magistrate may be served in the same manner as a like summons, warrant, writ or notice may be served under Part XV of the Criminal Code.

6. In addition to the method of service authorized by section five, service of any summons, warrant, writ or notice mentioned in section five upon a trade union or corporation may be effected by service of the same upon any officer in Canada of such trade union or corporation or by leaving it at the office of the trade union or corporation or at the last or most usual place of abode of any officer of the trade union or corporation with some inmate thereof apparently not under sixteen years of age.

Notice to Commence Collective Bargaining

7. A notice to commence collective bargaining given by an employer or employers' organization or a bargaining agent to any other party pursuant to section 12 or 13 of the Act, shall comply with the following provisions:—

- (a) the notice shall be signed by the party giving the notice or signed on his behalf in the manner prescribed by section 47 of the Act, and shall be addressed to the party to whom the notice is to be given;
- (b) the notice shall be dated and shall contain a request to the party to whom notice is given to commence collective bargaining with the party giving the notice with a view to the conclusion of a collective agreement between them or to the renewal or revision of any existing collective agreement between them, as the case may be;
- (c) the notice shall designate a convenient time, within twenty days from the date of the giving of the notice, when, and a convenient place where, parties may meet and commence or cause authorized representatives on their behalf to meet and commence collective bargaining.

Request for the Appointment of a Conciliation Officer or Conciliation Board

8. Where a request is made to the Minister by a party to collective bargaining, pursuant to section 16 of the Act, to instruct a conciliation officer to assist the parties in collective bargaining or for the appointment of a Conciliation Board, the request shall be accompanied by a statement containing the following information:—

- (a) the name and address of the party making the request and of the other party to the collective bargaining;
- (b) the date upon which notice was given under section 12 or 13 of the Act, as the case may be, to the other party to commence collective bargaining, together with a copy of the notice;
- (c) a copy of any existing collective agreement between the parties;
- (d) a statement of the steps that have been taken and the progress that has been made in collective bargaining following the giving of the notice, and the difficulties that have been encountered in connection with the collective bargaining since the date of the giving of the notice.

Complaint Alleging Violation of a Provision of the Act

(Sections 43 and 44 of the Act)

9. (1) Where any complaint is made to the Minister under section 43 or 44 of the Act alleging a violation of a provision of the Act, the complaint may be signed in the manner authorized by section 47 of the Act for the signing of a notice under the Act and shall be duly verified by affidavit or statutory declaration.

(2) The complaint shall contain the following particulars:—

- (a) the name and address of the party making the complaint and of the party against whom the complaint is made;
 - (b) a statement that the party making the complaint is aggrieved because of the alleged violation of the Act, with particulars setting out his interest in the complaint;
 - (c) the provision or provisions of the Act that, it is alleged, have been violated, including a reference to the sections in the Act containing those provisions; and a concise statement of the facts and actions upon which the complainant relies as constituting a violation of the Act, including all relevant dates and names and addresses of persons who are, in the opinion of the complainant, in a position to give evidence to substantiate the complaint, and the nature of such evidence;
 - (d) the steps, if any, that have been taken by or on behalf of the complainant for the adjustment of the matters giving rise to the complaint.
- (3) Upon receipt of a complaint, the Minister may request such further particulars of the complaint as he deems necessary from the party making the complaint and may as he deems advisable send forward a notice of the complaint and a copy of the complaint and of any particulars thereof made to and filed with him by the complainant to the party against whom the complaint is made, and may request that party to furnish to the Minister a reply to the complaint duly signed by that party and verified by affidavit or statutory declaration within seven days of receipt by that party of the notice or such further time as may be specified by the Minister.

Application to the Minister for Consent to Prosecute

(Section 46 of the Act)

10. (1) Where an application is made by any party to the Minister for consent to prosecute for an offence under the Act, the Minister may require the applicant to submit a written application in accordance with this section.

(2) The application may be signed on behalf of the party making the application in the same manner as is provided by section 47 for the signing of any notice under the Act by the applicant and shall be verified by affidavit or statutory declaration.

(3) The application shall contain the following particulars:—

- (a) the name and address of the applicant and of the party whom it is desired to prosecute;

(b) the particulars and nature of the offence alleged to have been committed and the provisions of the Act that it is alleged have been violated, including a reference to the sections of the Act containing those provisions and including the date or dates upon which and the place or places where the offence or offences against the Act were committed, or, if a continuing offence, the date upon which the offence commenced and the period of time during which it continued;

(c) a concise statement of the facts and actions upon which the complainant relies as constituting the violation or violations of the Act in respect of which consent to prosecute is requested, including all relevant dates and names and addresses of persons who in the opinion of the applicant are in a position to give evidence to substantiate the complaint and the nature of such evidence.

(4) Upon receipt of an application for consent to prosecute, the Minister may request from the applicant any further particulars that he deems necessary to dispose of the application and may give notice of the application and a copy of the application and of any particulars furnished by the applicant in support thereof as he deems advisable, to the party whom the applicant desires to have prosecuted, and may request that party to file a reply to the application duly verified by affidavit or statutory declaration within seven days following the receipt of the request or such further period of time as the Minister may specify.

Rules of Procedure of The Canada Labour Relations Board

Interpretation

1. In these rules,

- (a) "Act" means the Industrial Relations and Disputes Investigation Act;
- (b) "Board" means the Canada Labour Relations Board;
- (c) "Chairman" means the Chairman of the Board and includes, during the absence of the Chairman for any reason, the Vice-Chairman of the Board;
- (d) "Chief Executive Officer" means the Chief Executive Officer of the Board;
- (e) "party" includes a person, corporation, trade union, employee, employer, or employers' organization.

2. These rules govern the procedure of the Board.

3. (1) The forms prescribed by the Board from time to time for use in proceedings before it shall be used in such proceedings; copies of these forms may be obtained for use by any party from the Chief Executive Officer of the Board, Ottawa, Canada.

(2) Where by these rules notices are required to be given by the Board to any party or by any party to any other party or to the Board, the notices shall, unless otherwise in these rules provided, be in writing and may be filed or given or served by being sent by prepaid registered mail or by personal service; notices to be served upon or filed with the Board may be

addressed to or served upon the Chief Executive Officer of the Board, Ottawa, Canada.

(3) Where by the Act or by these rules a notice is required to be given by the Board, it may be given by the Chief Executive Officer.

Quorum of the Board

4. (1) Three members of the Board including the Chairman and one member representative of employers and one member representative of employees constitute a quorum for the purpose of any hearing or decision of the Board or the transaction of other business of the Board.

(2) The decision of the majority of the members of the Board present and constituting a quorum of the Board is a decision of the Board and, in the event of a tie, the Chairman has a casting vote.

(3) The Chief Executive Officer, with the concurrence of the Chairman, may set down any application or other matter pending before the Board for hearing by the Board and fix the time and place of the hearing, and shall do so in any case upon the request of the Chairman.

(4) Meetings of the Board shall be held as determined by the Board or at the call of the Chairman.

Enlarging or Abridging Time

5. When the Board deems it advisable it may postpone or adjourn the hearing or consideration of any matter for such time and from time to time and upon such terms as it may deem fit; or in any matter or proceeding abridge or enlarge the time prescribed by these rules for doing any act, filing any document or instituting any proceedings before it.

Decisions of the Board

6. All decisions of the Board shall be evidenced in the form of an order signed by the Chief Executive Officer.

Amendment of Proceedings

7. Any application or other document filed with the Board in connection with any proceeding under the Act may be amended at any time by leave of the Board upon such terms and conditions as the Board may prescribe.

Time for Filing Second Application

(Section 60 (1) of the Act)

8. Where an application for certification has been refused by the Board, the Board shall not entertain any further application by the applicant for certification in respect of the same or substantially the same unit of employees until a period of six months has elapsed following the date of the decision, except by special leave of the Board where the Board is of opinion that the prior application was rejected on account of a technical error or omission in connection therewith.

9. (1) Subject to these rules, in any proceedings before it, the Board shall afford an opportunity to all interested parties either to present oral or written evidence or make oral or written representations on the matters at issue as the Board deems advisable in the circumstances.

(2) Where any question arises in any proceedings before the Board as to whether a party is an interested party therein the Board shall decide the question and its decision thereon is final and conclusive.

Application for Certification of Bargaining Agent

(Section 7 of the Act)

10. (1) An application by a trade union for certification as bargaining agent under section 7 of the Act shall be in writing duly signed on behalf of a trade union as provided in section 47 of the Act and verified by statutory declaration or affidavit of the person or persons who signed the application.

(2) Upon the filing of the application the Board shall give notice thereof and send one or more copies of the application to the employer of the employees in the proposed bargaining unit and to any other interested party.

(3) In any particular case where the Board deems it advisable, the Board may require the employer to post one or more copies of the application and notice and to keep them posted for seven days in a conspicuous place or places in his establishment where they are most likely to come to the attention of the employees in the proposed bargaining unit, and in such case, forthwith upon the expiry of the period of posting, the employer shall file with the Board a statutory declaration proving compliance with the instructions of the Board for posting.

(4) Within seven days of receipt of the notice and copy of the application, the employer and any other party to whom the notice is sent shall notify the Board that he desires or does not desire, as the case may be, to intervene to contest the application and file reply thereto.

(5) Where notice of intervention is filed by the employer or other interested party, the party filing the notice shall file with the Board, within fourteen days of service upon him of the notice and copy of the application referred to in subsection 2, a reply to the application in writing signed on his behalf as provided in section 47 of the Act and verified by affidavit or sworn declaration of the persons who signed the reply.

(6) The reply shall contain a concise statement of the material facts upon which the intervener intends to rely and shall specifically admit or deny each of the statements made in the application.

(7) The reply shall also state whether or not a hearing before the Board is desired by the intervener in order to present evidence or make further representations in the matter, and where a hearing is requested, the reasons for such request, the nature of the further oral representations or evidence that it is proposed to make or present, shall be stated.

(8) Upon the filing of the reply, the Board shall send a copy thereof to the applicant who shall inform the Board forthwith upon receipt thereof whether or not he desires a hearing on the application for the purpose of making oral representations or presenting evidence and the nature of the representations and evidence it is proposed to make or present at the hearing.

(9) Where the Board is of opinion that a hearing on an application is advisable, notice fixing a time and place of the hearing shall be given to the applicant and to the employer and to all other interveners filing replies; the notice may be given by mail, telegraph or telephone.

Application to the Board to Prescribe a Provision for the Final Settlement of Differences Concerning the Meaning or Violation of a Collective Agreement

(Section 19 of the Act)

11. (1) An application to the Board to prescribe a provision for the final settlement of differences concerning the meaning or violation of a collective agreement may be made to the Board by either party thereto signed in the manner provided in section 47 of the Act and duly verified by affidavit or statutory declaration of the person or persons who signed the application.

(2) The application shall set forth the names and addresses of the parties to the collective agreement in respect of which it is desired to have the provision prescribed, the date of execution of the agreement and its duration, and the reasons for making the application; a true copy of the collective agreement shall be filed with the application.

(3) Upon filing of the application, the Board shall give notice and send a copy thereof to the other party to the collective agreement.

(4) Within fourteen days of receipt of notice and copy of the application, the other party to the collective agreement may file with the Board a written reply to the application signed as provided in section 47 of the Act and verified by affidavit or sworn declaration of the person or persons who signed the reply.

(5) The reply shall contain a concise statement of the facts and arguments upon which the party making a reply intends to rely and shall specifically admit or deny each of the statements made in the application.

(6) The reply shall also state whether or not a hearing before the Board is desired in order to make further oral representations or present evidence and where a hearing is requested, the reply shall state the reasons therefor and the nature of the representations or evidence that it is proposed to make or to present.

(7) Upon the filing of the reply, the Board shall send a copy thereof to the applicant who shall inform the Board forthwith whether or not he desires a hearing on the application and, if so, the nature of the oral representations or evidence that he proposes to make or present at the hearing.

(8) Where the Board is of opinion that a hearing on an application is advisable, notice fixing the time and place of the hearing shall be given to the interested parties; the notice may be given by mail, telegraph or telephone.

Complaints Alleging Failure to Negotiate

(Section 43 of the Act)

12. (1) Where the Minister of Labour pursuant to section 43 of the Act has referred to the Board a complaint from a

party to collective bargaining that any other party to the collective bargaining has failed to comply with paragraph (a) of section 14 of the Act or with paragraph (a) of section 15 of the Act, the Board shall send a copy of the complaint to the party alleged to be in default and shall by notice require that party to file and that party shall thereupon file with the Board within ten days of receipt of the notice, a reply to the complaint in writing signed in the manner provided by section 47 of the Act and verified by affidavit or statutory declaration of the persons who signed the reply.

(2) The reply shall state whether or not a hearing in the matter is desired and, if so, the nature of the representations or evidence that it is proposed to make or present.

(3) Before proceeding as provided in subsection one the Board may require the complainant to furnish further particulars in writing of the complaint and a full statement of the facts relied upon in support thereof duly verified by affidavit or sworn declaration.

(4) The reply to the complaint shall contain a concise statement of the facts upon which the party making the reply intends to rely and shall set out the facts and circumstances relating to the bargaining negotiations within the knowledge of that party and shall specifically admit or deny each of the statements made in the complaint.

(5) The respondent shall forward with the reply a copy of any notice or notices to commence collective bargaining given by or on behalf of the complainant to the respondent or by the respondent to the complainant and being or purporting to be given pursuant to section 12 or section 13 of the Act and received or given by the respondent, as the case may be.

(6) Where the Board is of opinion that a hearing on a complaint is advisable, notice fixing the time and place of hearing shall be given to the interested parties; the notice may be given by mail, telegraph or telephone.

(7) Upon the filing of a reply, the Board shall send a copy thereof to the complainant.

(8) Notwithstanding anything in this section, the Board may at any time following receipt of a complaint referred to the Board by the Minister, if it deems it expedient to do so, set the matter down for hearing before the Board at such time and place as may be fixed by the Board therefor.

(9) In the disposition of the complaint, the Board may take into consideration the reports of any inquiries made by it or that the Minister of Labour has caused to be made in connection with the complaint prior to the transmission of the complaint to the Board and that the Minister has made available to the Board.

Failure to Make Reply

13. Where upon an application or other proceedings before the Board, a party fails to give notice or to make reply within the time prescribed by these rules for doing so, that party is not entitled, except by leave of the Board, to any further notice of proceedings in the matter or to make further representations or to give further evidence to the Board in connection therewith.

Time of Filing

(Section 52, subsection (2) of the Act)

14. (1) Where the Board has directed a trade union or employers' organization to file with it a statutory declaration stating the names and addresses of its officers or a copy of its constitution and by-laws, the trade union or employers' organization shall comply therewith within seven days of the receipt of notice.

(2) Every trade union and employers' organization making application to the Board under these rules shall file with the Board a copy of its constitution and by-laws and the names and addresses of its officers, if they are not at that time already on file with the Board.

Member in Good Standing

(Section 7 of the Act)

15. For the purposes of section 7 of the Act, a member in good standing of a trade union shall be deemed by the Board to be a person who, in the opinion of the Board, is at the date of the application for certification

- (a) a member of the union; and
- (b) has, on his own behalf, paid at least one month's union dues for or within the period commencing on the first day of the third month preceding the calendar month in which the application is made and ending upon the date of the application; or
- (c) where he has joined the union within the period mentioned in paragraph (b) has, on his own behalf, paid the union application or admission fee in an amount at least equal to one month's union dues.

Votes of Employees

(Section 9 of the Act)

16. (1) Where the Board has directed that a vote be taken of the employees in a bargaining unit, the Chief Executive Officer is responsible for the taking of the vote and reporting thereon to the Board, and, subject to the direction of the Board, he has authority on behalf of the Board to settle all matters pertaining to the taking of the vote and to issue directions deemed necessary by him for the taking of the vote, including, without restricting the generality of the foregoing, authority to—

- (a) settle the list of employees entitled to vote;
- (b) settle the form of the ballot;
- (c) fix the method of voting and the time and place or places for the taking of the vote;
- (d) settle the forms of notice of election and provide for the posting thereof;
- (e) appoint a returning officer, deputy returning officer and poll clerks as he may deem necessary;
- (f) direct, in any case, that certain ballots be segregated and referred to the Board for a ruling;
- (g) give any special directions he may deem necessary as to the proper conduct of the vote.

(2) Every interested party shall comply with every reasonable request made by the

Chief Executive Officer, or any person designated by him to assist in the taking of the vote, for information or assistance required by him in the preparation for or the taking of the vote.

17. (1) The Chief Executive Officer of the Board, subject to the direction of the Board, is responsible for the processing of applications made to the Board, the issue of notices on behalf of the Board, the conduct of investigations for the Board in connection with applications and other matters coming before the Board and may, subject to the direction of the Chairman, in his discretion, undertake or cause to be undertaken such

investigation on the Board's behalf as he deems necessary in the circumstances of the case, and is responsible for the preparation and submission of reports to the Board concerning the matters mentioned in this section, and, subject to the direction of the Chairman, the issue of orders giving effect to the decisions of the Board.

(2) The Secretary of the Board shall keep a record of the proceedings and decisions of the Board and orders made by it, and shall assist the Chief Executive Officer in the discharge of his duties; in the absence of the Chief Executive Officer for any reason the Secretary shall act in his place.

Recent Decisions of Canadian Railway Board of Adjustment No. 1

The Canadian Railway Board of Adjustment No. 1 has released its findings in cases heard on September 14, 1948.

Case No. 572 concerning the Canadian Pacific Railway Company (Pacific Division) and the Brotherhood of Railroad Trainmen.

The controversy concerned the handling of mail by baggagemen.

The joint statement of facts revealed that mailmen were taken off and baggagemen were required to handle mail between Ruby Creek and Midway on both the east and west runs, a distance of 305.3 miles, on trains No's 12 and 11 running between Vancouver and Medicine Hat.

In their argument before the Board the employees quoted the relevant article in the Trainmen's schedule which provided compensation to train baggagemen "who receive, help to load or unload, handle for the purpose of checking, transfer or delivery, between or at terminals, any sacks of His Majesty's mail. . . ." They contended that the Clause quoted was agreed upon for the purpose of helping to load or unload mail on runs where no regular mail car was in service, such as a mixed train, or overflow mail that could not be put in the regular mail car, and further, that no such assurance of compensation was given where regular mail service was established on runs over a portion of the territory as in the case under review.

The Company reviewed in detail the procedure followed in such cases—"as far back as the Company's files and records in that respect go. . . ." B.C. District circular No. 36 dated August 17, 1944, addressed to agents, baggage masters and train baggagemen was quoted: . . . "it will be necessary for train baggagemen to handle mail as formerly between Midway and Ruby Creek in both directions". The Company held that the employees concerned were "being compensated for that work in accordance with the terms of the agreement."

Further written and oral evidence was presented by both parties in the controversy.

The Board ruled that the contention of the employees was not sustained.

Case No. 573 concerning the Canadian Pacific Express Company (Prairie Region) and the Order of Railroad Telegraphers.

The dispute centred around the claim of an agent for remuneration at \$125 a day (\$132.50) for services rendered the Company by meeting trains No's 330 and 52 at Saltcoats, Saskatchewan, for 106 days during the summer of 1947, outside his assigned railway office hours of duty, for the purpose of handling express business. The agent's average monthly express commission at Saltcoats amounted to \$110.

In their brief presented to the Board, the employees set forth in considerable detail the negotiations between the Company's Superintendent and the Agent with respect to the extra duties to which the latter had been assigned. In addition extracts from the several relevant agreements between the Company and its joint Express and Railway agents were extensively quoted.

The Company held that due consideration had been given the spread of hours which the agent was obliged to work and that he had been receiving "substantial amounts" from the Company in express commissions averaging \$4.29 per working day. The Company maintained that if the agent did not wish personally to handle the traffic, he should have arranged the necessary assistance, and paid for such assistance out of the commissions received, which, it was asserted, were "ample for the purpose."

The parties to the controversy appeared before the Board and presented further written and oral evidence in support of their contentions.

The Board decided that the contention of the employees was sustained.

Case No. 574 between the Canadian National Railways and the Brotherhood of Railroad Trainmen, concerning the dismissal of a train conductor in connection with the derailment of a first-class passenger train running between Levis, Quebec, and Campbellton, N.B., in March, 1948.

The joint statement of facts indicated that the train left Campbellton at 4:40 a.m. on March 2, two hours and five minutes late. Prior to the departure of the train from Rivière du Loup (an intermediate station), at 10:37 a.m., the conductor received four train orders, one of which read, "Siding on St. Andre (15.6 miles distant) will be used as main track". Twenty minutes after the train left Rivière du Loup, it was derailed on entering the siding at St. Andre.

The conductor was taken out of service on arrival of the train at Levis at 8:45 p.m. of the same day. Following an investigation in the Assistant Superintendent's office in Levis four days later the conductor was informed that he had been discharged from the service on the ground of "failure to take necessary action to have speed of train restricted approaching east switch of siding at St. Andre, resulting in derailment of engine and all cars of train No. 1 . . . also for giving incorrect information at the investigation." The conductor was reinstated as a brakeman on June 1, 1948, and resumed duty as a baggageman on June 6.

The employees contended that the engineer (fatally injured in the accident) had a clear view of approximately two miles and it had been observed by the conductor that the engineer had made two applications of the automatic brake while approaching the scene of the accident, thus reducing speed to what the conductor estimated to be 25 miles an hour. They also claimed that there was nothing in the operating rules governing the speed of trains entering a passing track, nor was there any rule or special instructions requiring conductors of passenger trains to give any communicating signals in such instances. Consequently, they asserted, they were unable to find that the conductor had violated any of the Company rules. They contended, also that he had been wrongfully accused of giving incorrect information.

The Company, in its rebuttal presented a detailed and technical statement covering the train orders, the speed of the train and the condition of the track at the point of derailment both before and after the accident. Evidence was produced to show that the train was travelling at an excessive speed as it approached St. Andre and that

immediately following the derailment the engine overturned and travelled on its side a distance of 308 feet.

In summing up its case, the Company contended that the conductor's actions prior to this accident "indicate conclusively that in discharging him from the service, the Canadian National Railways took the only course of action open to them . . . (he) has indicated that he does not properly appreciate his responsibility as a conductor. . . ."

Additional oral and written evidence was presented in support of the respective contentions.

The Board decided that the contention of the employees was not sustained, but recommended that consideration be given to modifying the restrictions placed on this employee's services.

Case No. 575 concerning the Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen, in connection with the discharge of a yard foreman following the derailment of a passenger train at Niagara Falls, June, 1948.

The joint statement of facts revealed that a passenger train consisting of an engine and nine cars ran into an open main line switch of a stub track, resulting in the train running over the end of the track and causing personal injuries to 13 passengers, employees and other parties on the Company's property and extensive damage to equipment and property. Investigation showed that the yard foreman had used the switch about four hours prior to the accident and had been discharged for violating the rule that "switches must at all times be secured, and main track switches when not in use must be kept locked."

The employee's brief contained an assertion by the yard foreman that he had closed and locked the switch to the stub siding upon which the accident occurred. Corroborative evidence was presented by the engineer and fireman who had been placing cars on the stub track and also by a yard helper. It was also claimed that the siding in question was used by maintenance of way and bridge and building forces in securing supplies from the shed, as well as by yard crews in switching.

The Company in its statement described in detail the yard assignment which had been carried out on the morning of the accident under the supervision of the yard foreman. It was asserted that when the yard helper had opened the main line switch to the stub-track siding, he placed the lock on the switchstand, instead of locking the switch, and that lock and switch

were in that position when examined after the accident. The further claims were made that the main track at that location had not been used by any engine or crew in the interval between the completion of the yard assignment and the time of the accident, that the switch lock was in good condition, that there was no evidence to show that the yard foreman had closed and

locked the switch, but rather that he had engaged himself in other work some distance away.

Additional oral evidence was submitted in support of the respective contentions.

The Board decided that the contention of the employees had been sustained to the extent of reinstatement of the yard foreman without pay for time lost.

COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

Recent Collective Agreements

A file of collective agreements is maintained in the Research and Statistics Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc. are summarized in separate articles following this.

Logging

ONTARIO.—CERTAIN PULP AND PAPER MANUFACTURERS AND OTHER PULPWOOD CUTTING OPERATORS IN NORTHWESTERN ONTARIO AND THE LUMBER AND SAWMILL WORKERS' UNION OF THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA.

Agreement negotiated jointly but signed by individual companies, to be in effect from September 1, 1948, to August 31, 1949, and thereafter from year to year subject to notice. The companies recognize the union as the sole collective bargaining agency for all eligible employees. *Check-off*: the companies agree to deduct union dues from time to time from moneys due employees who so authorize and remit same to the union.

Hours of work for day workers shall be 8 per day, 6 days a week, a 48-hour week (except cooks, cookees, chore boys, watchmen, barn bosses, raftsmen). Walking distance up to $1\frac{1}{2}$ miles each way or riding time up to $\frac{1}{2}$ hour each way shall not be included in the above 8-hour day. Any time worked in excess of 8 hours per day or 48 hours per week shall be paid for at the regular rate of pay. However, men will work as many hours during the week as may be necessary to do the work in hand during the driving season and the ice and snow hauling season. *Vacations with pay*: every employee covered by the agreement shall receive vacation credits, in lieu of vacations with pay, equal to 2 per cent of his gross earnings during his employment providing he works a minimum of 75 days within a 4-month period with the same company.

Sick leave with pay is a provision of two of the agreements summarized this month, that between the Dryden Paper Company and the International Brotherhood of Paper Makers and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers and that between the Ronson Art Metal Works (Canada) Ltd. and the United Steelworkers of America. Both agreements provide for one week's sick leave with pay per year under stated conditions and one of them for an additional two weeks at half pay.

Daily wage rates for certain classes: loaders and unloaders, hand drillers, sorters, sluicers, jackladder feeders \$7.35, skidders and rollers \$7.45, teamsters \$7.35 to \$7.70, tractor and truck drivers \$7.40 to \$9.40, river drivers \$7.75 and \$8.05, saw filers \$7.40 to \$8.45, blacksmiths \$7.70 to \$9.10, mechanics \$7.70 to \$9.40, cooks \$7.70 to \$9.10, cookees \$5.75 to \$6.30, general labourers \$7.15, apprentices \$5.50. A special rate may be established for aged and handicapped workers. The charge for board and lodging shall be \$1.65 per calendar day, and the companies agree to maintain a policy of good conditions in respect to cleanliness, sanitation and health.

Provision is made for *seniority rights*, *grievance procedure* and an *apprenticeship plan*.

Manufacturing

Pulp, Paper and Paper Products

MERRITTON, ONT.—ALLIANCE PAPER MILLS LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL 77.

Agreement to be in effect from May 1, 1948, to April 30, 1949, and thereafter from year to year subject to 30 days' notice. This agreement is similar to the one previously in effect (L.G., March 1947, p. 367) with the following change—*Hourly wage rates* for certain classes (includes a 14 cents per hour increase in 1947 and a 10 per cent increase

on male rates 95 cents and over and on female rates, 11 per cent on all male rates under 95 cents effective May 1, 1948): paper mills—beater engineers \$1.12 to \$1.27, second hands (beaters) 95 cents to \$1.04, third hands (beaters) 93 cents to \$1.04; paper machine tenders \$1.23 to \$1.43, back tenders \$1.07 to \$1.21, third hands 97 cents to \$1.04, fourth hands 93 to 97 cents, packers 98 cents, cutter operator and embosser operator \$1, firemen \$1.12, labourers 90 cents; sulphite mill—digester operators \$1.24, bleach and acid operators \$1.16, shipping 93 to 98 cents, ash handlers \$1.03 to \$1.05, labourers 90 cents; bag mill—girls (inexperienced) 72 cents; (experienced) 74 cents; maintenance—electricians, machinists \$1.03 to \$1.22, millwrights \$1.02 to \$1.18, pipefitters \$1.04 to \$1.20, helpers 94 cents, painters 97 cents to \$1.07, oilers \$1.04.

DRYDEN, ONT.—THE DRYDEN PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 223) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 105).

Agreement to be in effect from June 1, 1948, to June 1, 1949, and thereafter from year to year. *Union Security:* any employee who is now or later becomes a member of the signatory unions shall maintain such membership in good standing as a condition of employment. New employees, eligible for membership, shall join such unions after 30 days. When hiring new employees the company will give preference to union members, if such are available and are capable of doing the required work.

Hours of work: for day workers, 8 per day 6 days a week: four workers will be organized into shifts of 8 hours or less, shifts to rotate in sequence weekly. Woods department 10 hours per day. *Overtime:* time and one-half will be paid day workers if called at night for the time worked; four workers will be paid time and one-half for all time worked during the regular shut down periods on Sundays and on 5 specified holidays, 4 of which are paid holidays. In the woods department, time and one-half after 60 hours per week.

Vacation with pay: one week to all employees with one year's continuous service, 2 weeks to employees with 5 or more years' continuous service with the company.

Sick leave with pay: an employee with one year's seniority with the company may be paid his regular wages for 6 days in any calendar year if he is confined to his home or a hospital because of illness or non-industrial accident for 10 or more days upon furnishing satisfactory proof to the company.

Hourly wage rates for certain classes: pulp mill, woodroom—chippermen, oilers \$1.05, slashers \$1.04, sawyers \$1.38; new recovery room—operators \$1.20, helpers \$1.08 and \$1.12, oilers \$1.03; digesters and diffusers—cooks \$1.20, helpers 99 cents and \$1.07, diffuser men \$1.11, helpers 99 cents and \$1.06; mechanical—electricians, machinists \$1.14 to \$1.25, welders, pipefitters, millwrights \$1.18 and \$1.26, helpers \$1.03 to \$1.09, painters \$1.09 and \$1.14; boiler room—engineers, mechanics (second and third class) \$1.31 and \$1.26, firemen (third and fourth class) \$1.16 and \$1.11, ash handlers 98 cents, yard labourers 95 cents; paper mill—machine tenders \$1.26 to \$1.60, back tenders \$1.13

to \$1.40, third hands \$1.04 to \$1.23, fourth hands \$1.01 to \$1.10, fifth hands 99 cents to \$1.05, broke hustlers, broke beatermen 95 cents, beatermen \$1.40, helpers 98 cents to \$1.18, grinder men, wet press operators 96 cents, oilers \$1.13; finishing room—shippers \$1.11 to \$1.26, checkers \$1.06 to \$1.08, loaders 98 cents; female workers—checkers 82 cents, counters, liner makers 77 cents, beginners 69 cents. Woods department—truck drivers \$1.03 and \$1.13, dragline drivers \$1.48, tractor drivers \$1.23 and \$1.48, mechanics \$1.24 and \$1.36, millwright \$1.26, blacksmith \$1.23, labourers 95 cents.

Provision is made for *seniority rights, grievance procedure* and an *apprenticeship plan*.

Manufacturing

Metal Products

ARVIDA, P.Q.—THE ALUMINIUM COMPANY OF CANADA LIMITED AND LE SYNDICAT NATIONAL DES EMPLOYÉS DE L'ALUMINIUM D'ARVIDA, INC.

Agreement of September 18, 1945, amended in 1946, 1947, and June 22, 1948, and to be in effect to May 15, 1949, and thereafter from year to year subject to 30 days' notice. Neither the company nor the union will discriminate against any employee by reason of race, colour, creed, nationality, religious or political beliefs, or union or non-union affiliation or activity. *Check-off:* company will deduct union dues monthly from the pay of members who so authorize and remit same to the union.

Hours of work: day workers—8 per day Monday through Saturday, a 48-hour week; shift workers—8 per shift, 6 days a week. Shift workers will be entitled to an average of at least one rest day per calendar week. They shall be allowed time off for meals (not to exceed 20 minutes) during the middle of the shift. *Overtime:* time and one-half for work in excess of 8 hours per day and 48 hours per week providing a full week has been worked (any approved absence to be counted). Nine specified statutory holidays will be observed as holidays for day workers.

Vacation with pay: all hourly paid employees who have been continuously employed by the company during the preceding 12 months shall be entitled to one week and each succeeding year provided they have worked at least 1,800 hours since last vacation. After completing 5 years of continuous service, employees shall be entitled to 2 weeks providing they have worked at least 1,800 hours during preceding year.

Wage rates as set forth in an appendix to the agreement are made a part of the agreement. These rates will be reviewed once each year and adjustments within the ranges will be made. When an employee at the maximum rate for his class is promoted to a higher class in the same occupation, his pay shall be increased by at least 2 cents per hour.

The hourly wage ranges for certain classes for day workers (shift workers receive 2 cents per hour more in each class) follow: apprentices 65 cents to \$1, analysts 93 cents to \$1.11, armature winders \$1.05 to \$1.22, blacksmiths, millwrights \$1.01 to \$1.25, brakemen 92 cents to \$1.15, coremakers, fitters, moulders \$1.01 to \$1.24, crane-men 88 cents to \$1.01, electricians \$1.05 to \$1.28,

furnacemen 93 cents to \$1.13, groundmen 91 cents to \$1.03, labourers 87 to 90 cents, linemen \$1.06 to \$1.18, machinists \$1.06 to \$1.28, mechanics 98 cents to \$1.24, pipe-fitters \$1.01 to \$1.21, tinsmiths \$1.01 to \$1.23, truck drivers 88 cents to \$1.07, welders \$1.01 to \$1.28. A *cost-of-living bonus* effective June 22, 1948, of 1 cent an hour will be paid if the cost-of-living index of the Dominion Bureau of Statistics goes up to 155, and an additional 1 cent an hour if the index goes up to 157. However the bonus shall be decreased by 1 cent an hour if the index after reaching 157 falls below 155 and an additional 1 cent an hour if the index falls below 153.

Provision is made for *grievance procedure*.

ARVIDA, P.Q.—THE ALUMINUM COMPANY OF CANADA LIMITED AND LE SYNDICAT NATIONAL DES COMMIS DE BUREAU D'ARVIDA.

Agreement to be in effect from August 13, 1948, to August 12, 1949, and thereafter from year to year subject to notice. The company and the union will not discriminate against any employee by reason of race, colour, creed, nationality, religious or political belief or of union affiliation or non-union affiliation or union activity and will not tolerate any such discrimination.

Hours of work: standard working hours for day clerks are 8 per day Monday through Saturday, a 48-hour week. This is the maximum; actually the working hours for plant clerks range from 39½ to 48 hours per week. Shift clerks work an 8-hour shift with time up to 20 minutes allowed off for meals. Shift workers will be entitled to an average of at least one rest day per calendar week. Any employee who works over 48 hours per week at the request of his departmental head, and has not had the equivalent time off for sick leave or other reasons during the current calendar year may by arrangement with his departmental head, when mutually agreeable, secure time off equal to the excess hours worked. Nine specified statutory holidays shall be observed as holidays for day clerks. Shift clerks are not allowed these statutory holidays due to the nature of continuous operations.

Vacation with pay: 2 weeks to employees engaged on or before October the first of the preceding year. One week to employees engaged after the first of October but before the first of April in the year during which the holidays are to be taken. Thereafter employees receive 2 weeks provided they have worked at least 1,800 hours during preceding year.

Weekly wage rates, minimum and maximum—junior clerks \$23 and \$32, intermediate clerks \$33 and \$49, senior clerks \$50 and \$70.

Provision is made for *grievance procedure*.

KINGSTON, ONT.—ALUMINUM COMPANY OF CANADA, LIMITED AND UNITED STEEL WORKERS OF AMERICA, LOCAL 343.

Agreement to be in effect from July 30, 1948, to June 1, 1949, and thereafter from year to year subject to 60 days' notice. This agreement is similar to the one previously in effect (L.G., July, 1946, p. 927) with the following changes—*Statutory holidays* are increased from 6 to 8. *Check-off* of union dues provided by the company for employees who

so authorize for the term of the agreement or until revoked. *Vacation with pay* regulations have been changed to provide for 2 weeks vacation with pay to employees with 5 years' continuous service with the company instead of 7 years' service. *Minimum hourly wage rates* have been increased by 7½ to 12½ cents per hour over the 1947 rates, and a night shift differential of 5 cents per hour is paid for work on off-shifts.

TORONTO, ONT.—RONSON ART METAL WORKS (CANADA) LIMITED AND THE UNITED STEELWORKERS OF AMERICA (LOCAL 2450).

Agreement of September 13, 1946, modified and extended from September 13, 1948, to September 13, 1949. All present members of the union in good standing must as a condition of employment remain members of the union in good standing during the term of the agreement. All new employees eligible to the union, must after their probationary period join the union within 30 days and remain members in good standing.

Hours of work: 8 per day Monday through Friday, a 40-hour week. *Overtime* at time and one-half shall be paid for time worked in excess of the regular hours and double time for all work on Sundays and 8 specified holidays, which are paid holidays for employees with 60 days' service who work the days immediately preceding and following the holiday. *Vacation with pay:* one week shall be granted to employees with one year's continuous service with the company, an extra day for each additional year to a maximum of 2 weeks. Employees with 6 to 9 months' service with the company receive ½ a week, and employees with 9 months to a year ¾ of a week vacation.

Sick benefit: all employees with one year's service or more to receive one week's pay at their regular rate (40 hours straight pay), and 2 weeks at one-half their regular rate in the event of proven sickness. This benefit shall apply only once in any calendar year.

Hourly wage rates: effective September 13, 1948, hourly wage rates are increased 13 cents for all male employees of 18 years and over, and 8 cents for all female employees, so that a minimum of 83 cents per hour is established for males, and 68 cents per hour for females. The increase also brings the hourly maximum for males to the following by departments: foot press 83 cents, soldering \$1.06, enamelling \$1.08, polishing \$1.18, repair, assembling \$1.03, examining, finishing and parts room clerks 83 cents. All piece workers will receive an increase in their piece work rates proportional to the increases made to the time workers.

Provision is made for *seniority rights* and *grievance procedure*.

Non-Metallic Minerals and Chemicals

SARNIA, ONT.—DOW CHEMICAL OF CANADA, LIMITED (PRIVATELY OWNED PLANTS), AND UNITED MINE WORKERS OF AMERICA, LOCAL 13324, DISTRICT 50.

Agreement to be in effect from August 12, 1948, to October 12, 1949, and thereafter from year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees in the processing and maintenance departments of the company's privately owned plants at Sarnia. There shall be no

discrimination, coercion, restraint or influence by the company or union because of membership or non-membership in any labour organization or activity or lack of activity therein. *Check-off*: the company agrees to deduct union dues from the bi-weekly pay of employees who so authorize and an initiation fee up to \$3 during the life of the agreement.

Hours of work: 8 per day Monday through Friday for day workers, for shift workers 8 per shift normally with schedule so arranged to give 2 days off every 8 days. *Overtime*: for day workers, time and one-half for work in excess of the regular hours and for all work on Saturdays; double time for all work on Sundays and on 8 specified holidays and for hours worked in excess of 16 in one stretch without relief or from midnight to 8 a.m. where a minimum of 7½ hours of regular days' work has been performed before midnight. For shift workers

time and one-half for all hours worked in excess of 8 hours per day, for all time worked on the first day of an employee's scheduled "two consecutive days off"; double time for all work on the second day of an employee's scheduled "two consecutive days off", or on 8 specified holidays, time worked in excess of 16 hours in one stretch without relief or between midnight and 8 a.m. when employee has already completed regular shift by midnight. An employee will be paid for any of 8 specified holidays that fall on a regular working day provided he has worked his regular turn the day before and the day after the holiday. *Vacation with pay*: one week to employees with one year's service with the company, 2 weeks to employees with 3 or more years' service with the company.

Wage rates during the term of the agreement will conform to the existing scale.

Provision is made for *seniority rights* and *grievance procedure*.

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement, the amendment of 6 other agreements and the correction of one agreement. These include the extension of a new agreement for retail stores at Granby in the *Quebec Official Gazette* of October 23, the amendment of the agreements for printing trades at Quebec, for the furniture industry for the province and for building trades at Hull in the issue of October 30, and the correction of the agreement for the wholesale fur industry at Montreal in the issue of November 13. The other amendments are summarized below.

A request for the amendment of the agreement for building trades at Hull was gazetted October 23. Requests for a new agreement for printing trades at Quebec

* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or association of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties.

Summaries of this legislation and amendments to it were published in the *LABOUR GAZETTE*, May, 1934, p. 417, June, 1935, p. 526, July, 1936, p. 607, December, p. 1127, July, 1937, p. 745, May, 1938, p. 503, June, 1939, p. 576, August, 1940, p. 812, June, 1941, p. 647, July, 1943, p. 1026, May, 1946, p. 681. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

and for the amendment of the agreements for the building materials industry for the province, for the ornamental iron and bronze industry at Montreal and for building trades at Montreal and at Hull were all published October 30. Requests for the amendment of the agreements for barbers and hairdressers at Joliette and at St. Johns and Iberville were gazetted November 6. Requests for the amendment of the agreements for retail food stores at Quebec, for the uncorrugated paper box industry for the province, for barbers and hairdressers at Quebec, for the building materials industry for the province and for a new agreement for retail stores at Rimouski were gazetted November 13. Requests for the amendment of the agreements for hardware and paint stores at Quebec, for building trades at Montreal and at Hull, for hospital and charitable institution employees at St. Hyacinthe, for barbers and hairdressers in Missisquoi County and for clockmakers in the Eastern Townships and for a new agreement for wholesale and retail commercial establishments at Roberval were all published November 20.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing

Fur and Leather Products

SHOE INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated October 21, and gazetted October 23, amends the previous Orders in Council for this industry (L.G., Jan.-Feb., 1948, p. 51, April, p. 331, Nov., p. 1245, and previous issues). Agreement to remain in effect until September 1, 1949,

and thereafter from year to year, subject to notice. Present amendments to be retro-active to September 1, 1948.

Operations and classifications: the description of operations and classifications is amended by adding several new operations and by transferring a few operations to other classes.

Minimum wage rates: the new wage rates for hourly-paid and for piece-work employees are shown in the accompanying tables. The minimum wage rates for office employees are increased from 37 to 40.7 cents per hour in zone I, from 34 to 37.4 cents in zone II, and from 32 to 35.2 cents in zone III.

Minimum hourly wage rates for hourly-paid employees of the pattern making, cutting, sole leather, lasting, making and finishing departments

| | I | Zones II | III |

(The above rates are increases ranging from $4\frac{1}{2}$ to 10 cents per hour over previous rates.)

Vacation: in addition to the week's vacation already provided for, every employer shall grant between Christmas Day and January 6 of each year, under the same conditions, a second week's vacation with pay equivalent to 2 per cent of the wages earned from January 1 to December 25 preceding the vacation week.

Metal Products

MECHANICAL CONSTRUCTION AND REPAIR INDUSTRY, QUEBEC DISTRICT.

An Order in Council, dated October 21, and gazetted October 30, amends the previous Order in Council for this industry (L.G., Nov., 1948, p. 1247).

Territorial jurisdiction comprises the City of Quebec and within a radius of 50 miles from its limits; however, this jurisdiction covers only the territory comprised in the judicial districts of Quebec, Beauce and Montmagny.

Certain changes have been made in the classification of trades, and the new wage scale is as follows:—

Minimum wage rates in zone I: toolmaker \$1 per hour, tracer 80 cents, general machinist, pattern-maker 80 cents, lathe, shaper, etc., operator, marine mechanic, fitting mechanic, general boilermaker, tinsmith, pipe mechanic, welder 75 cents, joiner in a mechanical engineering shop, blacksmith, cutter (oxyacetylene, electricity) 70 cents, machine operator, first year 60 cents, second year 65 cents, third year 70 cents, assembler, first year 55 cents, second year 60 cents, third year 65 cents, fourth year 70 cents, storeman 65 cents, truck driver 62 cents, helper 60 cents, labourer 55 cents. (These rates are 5 cents per hour higher than those paid in zone II and 15 cents higher than in zone III, with the exception of joiner in a mechanical engineering shop whose rate is 5 cents per hour higher than in zone II and 10 cents higher than in zone III.) The rate for boiler-

maker, erector and welder is unchanged at \$1.15, and helpers of these trades, 85 cents.

Construction

MECHANICAL CONSTRUCTION AND REPAIR INDUSTRY, QUEBEC DISTRICT.

See above, under "Manufacturing: Metal Products".

BUILDING TRADES, MONTREAL.

An Order in Council, dated October 21, and gazetted October 30, amends the previous Orders in Council for this industry (L.G., Sept., 1948, p. 993, Nov., p. 1247) by increasing the minimum wage rates of certain trades as follows: marble setter from \$1.30 to \$1.40 per hour, tile setter, terrazzo layer from \$1.23 to \$1.40 per hour, terrazzo polishing machine operator (dry) from \$1.08 to \$1.23 per hour, terrazzo polishing machine operator (wet) from 90 cents to \$1.05 per hour; hand marble polisher is paid a minimum of \$1.10 per hour.

Minimum wage rates for apprentices in certain trades are increased as follows: for the trades of marble, tile and terrazzo setters by 11 cents per hour in the first and second year, 15 cents in third year and 18 cents in fourth year; for terrazzo polishing machine operator (dry) 7 cents per hour in first 3 months, 13 cents in second 3 months and 15 cents after 6 months; for terrazzo polishing machine operator (wet) 16 cents per hour in first 3 months and 15 cents after 3 months. The minimum hourly rates for apprentices in the marble, tile and terrazzo setters' trades now are 85 cents to \$1.25, apprentice terrazzo polishing machine operators (dry) 95 cents to \$1.23, apprentice terrazzo polishing machine operators (wet) 90 cents to \$1.05.

Overtime for employees in the trades of marble, tile and terrazzo layers and terrazzo dry or water polishing machine operators is payable at time and one-half with double time between midnight and 8 a.m.

Industrial Standards Acts, Etc.

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in New Brunswick, Ontario, Saskatchewan and Alberta

Recent proceedings under the Industrial Standards Acts, etc.* include new schedules for barbers at London, at Woodstock, at Pembroke and at Galt, Hespeler and

Preston, published in *The Ontario Gazette* of October 9. Other Orders in Council are summarized below.

NEW BRUNSWICK

Construction

PLUMBERS, SAINT JOHN.

An Order in Council, gazetted November 10, makes binding the terms of a new schedule for plumbers at Saint John and

of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the *LABOUR GAZETTE*, December, 1948, page 1422.

*In six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours

within a radius of 15 miles, to be in effect until May 1, 1949.

Hours: 8 per day Monday to Friday, 4 on Saturday, a 44-hour week.

Overtime is payable at time and one-half for the first 6 hours, double time thereafter and on Sundays and 9 specified holidays.

Minimum wage rate: \$1.20 per hour.

ONTARIO

Construction

CARPENTERS, WINDSOR.

An Order in Council, dated October 7, and gazetted October 23, makes binding the terms of a new schedule for carpenters at Windsor, to be in effect from November 2, 1948, during pleasure. This schedule is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, April, 1948, p. 336, with the following exception:—

Minimum wage rate is increased from \$1.35 to \$1.50 per hour.

ELECTRICAL WORKERS, WINDSOR.

An Order in Council, dated October 7, and gazetted October 23, makes binding the terms of a new schedule for electrical workers at Windsor, to be in effect from November 2, 1948, during pleasure.

Hours: 8 per day Monday to Friday, a 40-hour week.

Overtime is payable at double time.

Minimum wage rate: \$1.65 per hour. The advisory committee may fix a lower minimum rate for handicapped workers.

SASKATCHEWAN

Construction

PLUMBERS, SASKATOON AND SUTHERLAND.

An Order in Council, dated September 28, and gazetted October 9, rescinds the Order in Council making this schedule binding and amendment (L.G., May, 1940, p. 502; Dec., 1941, p. 1575).

Transportation and Public Utilities

Local and Highway Transport

DRAYING, TRANSFERRING AND STORAGE INDUSTRY, REGINA.

An Order in Council, dated September 21, and gazetted October 2, rescinds the Order in Council making this schedule binding (L.G., July, 1939, p. 733).

Service

Business and Personal

BEAUTY CULTURE INDUSTRY, HUMBOLDT.

An Order in Council, dated September 28, and gazetted October 9, rescinds the Order in Council making this schedule binding (L.G., Oct., 1941, p. 1318).

BEAUTY CULTURE INDUSTRY, NORTH BATTLEFORD.

An Order in Council, dated September 28, and gazetted October 9, rescinds the Order in Council making this schedule binding (L.G., Aug., 1940, p. 871).

ALBERTA

Manufacturing

Vegetable Foods

BAKERS, CALGARY.

An Order in Council, dated October 12, and gazetted October 30, amends the previous Order in Council for this industry (L.G., Dec., 1946, p. 1778).

Hours are reduced from 9 to 8 per day and from 48 to 45 per week for all employees.

Minimum wage rates for male employees are increased by \$6.50 per week.

Minimum wage rates for female employees are as follows: female help in bread shop—rackers and bread wrappers \$26.50 per week for first 3 months, \$29.50 thereafter; female help in cake shop on bench work—first 6 months \$24.50, second 6 months \$28.50, thereafter \$32.50; cake depositor operator—first 6 months \$27.50, second 6 months \$31.50, thereafter \$35.50; female help in cake shop—wrappers, finishers, packers, box makers and liners \$24.50 per week plus \$1 per week increase every 6 months up to \$31.50.

BAKERY SALESMEN, CALGARY.

An Order in Council, dated October 12, and gazetted October 30, amends the previous Order in Council for this industry (L.G., Dec., 1946, p. 1778).

Hours for salesmen and servicemen are reduced to 48 per week.

Overtime is payable at \$1.30 per hour. (This is an increase of 30 cents per hour over the previous overtime rate.)

Minimum wage rates are increased by \$7 per week.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During October

(1) *Works of Construction, Remodelling, Repair or Demolition.*

During the month of October the Department of Labour prepared 122 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 84 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) *Contracts for the Manufacture of Supplies and Equipment.*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

| Department | No. of contracts | Aggregate amount |
|---|---------------------|---------------------|
| Canadian Commercial Corporation. | 5,863 | \$8,814,940.00 |
| Post Office. | 13 | 48,391.68 |
| R.C.M.P. | 8 | 126,661.60 |

CONTRACTS CONTAINING FAIR WAGES SCHEDULES AWARDED DURING OCTOBER

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

LABOUR LAW

Recent Regulations Under Dominion and Provincial Legislation

In Saskatchewan every person engaged in a trade covered by the Apprenticeship Act in any city or town of over 3,000 population is now required to hold a certificate. The grant to school districts maintaining facilities for vocational education has been increased. Dependent and unemployable persons over 21 who are incapacitated may now be included in the maximum tax any one family is required to pay for hospitalization.

DOMINION

Canada Shipping Act

New regulations have been approved by an Order in Council of July 8 (P.C. 3055), gazetted November 10, governing qualifications for certificates of competency for first-second- third- and fourth-class engineers, and for first- and second-class engineers' certificates valid in the United Kingdom. The former regulations made under P.C. 2253 of December 23, 1904, are now rescinded.

Regulations approved by an Order in Council of November 5 (P.C. 5094), gazetted November 24, provide for quinquennial inspection of ships, other than passenger steamships carrying more than twelve passengers, provided such ships are surveyed by an approved classification society and the society's certificate endorsed by the steamship inspector appointed under the Act. Annual inspection by such an inspector is still required for life-saving and fire-fighting equipment.

PROVINCIAL

British Columbia Factories Act and Shops Regulation and Weekly Holiday Act

A proclamation declaring Monday, December 27, 1948, a public holiday for the purposes of the Factories Act and Shops Regulation and Weekly Holiday Act was issued on November 1, gazetted November 4.

British Columbia Minimum Wage Acts and Hours of Work Act

The annual permission for overtime in the mercantile industry during the Christmas season has been granted by Orders issued on November 17, gazetted November 18.

Under the Hours of Work Order, shop workers in Vancouver and district, Victoria, Esquimalt, Oak Bay and Saanich may work two hours in excess of the statutory eight on both December 21 and December 23, and shop workers elsewhere in the Province, two hours overtime on December 23. Orders under the Minimum Wage Acts require time and one-half to be paid for the hours worked in excess of eight on December 21 and 23 in the places specified above, and on December 23 in all other places.

For temporary workers taken on between December 4 and December 31, inclusive, special rates are fixed. No male worker may be paid less than 45 cents an hour and no woman working 39 hours or more in a week may be paid less than \$17, or if she works less than 39 hours in a week, less than 45 cents an hour.

New Brunswick Health Act

A candidate for a journeyman plumber's licence must now satisfy the Examining Board that he has been engaged in the plumbing trade before January 1, 1949, and that he has had either five years' practical experience or has completed the period of training required of an apprentice in this trade under the Apprenticeship Act. This amendment in the regulations was made by an Order in Council of November 4, gazetted November 17.

Formerly, this section stated that a candidate was required to hold the certificate issued by the Provincial Apprenticeship Committee granting him journeyman's status as an alternative to five years' practical experience (L.G., 1946, p. 1464).

Saskatchewan Apprenticeship Act

The General Regulations governing apprenticeship and tradesmen's qualifications

(L.G., 1946, p. 833) have been amended to permit only a person holding a valid certificate of qualification, an interim, provisional or apprentice's certificate, to engage in a designated trade under the Act in or within a radius of five miles of any town or city of more than 3,000 population.

The Act covers the building, electrical, sheet metal, motor vehicle repair, barbering and beauty culture trades, blacksmiths, custom welders, petroleum pipe line fitters and printers in the weekly newspaper trade.

The Department of Labour may now issue an interim certificate, upon payment of the prescribed fee, to a person who has failed in an examination but who shows sufficient skill and knowledge to justify the issuance of such certificate, and a provisional certificate to a person who is waiting for an opportunity to take an examination. The Department must grant to every indentured apprentice who has paid the prescribed fee a certificate valid for one year.

The Director of Apprenticeship, instead of the Board of Examiners as before, is empowered to conduct tests in any designated trade to determine the competency of an apprentice and may also conduct such tests for other persons engaged in the trade.

Non-resident employers are now required to pay a higher fee than resident employers for an annual certificate of registration. Formerly, one fee, depending on the number of persons employed, was fixed for all employers regardless of residence. A "non-resident employer" is defined as a "corporation whose head office is located outside of Saskatchewan and which has no registered office in Saskatchewan or an individual whose normal place of residence is outside of Saskatchewan."

All employers, employees or apprentices who fail to apply for renewals of certificates of registration or qualification within 30 days after their expiration, must now pay an additional amount.

These amendments were made by an Order in Council (1555/48) of September 15, gazetted November 29.

Saskatchewan Hospitalization Act

Persons over 21 years of age who are the dependent children of residents of Saskatchewan and unemployable because of permanent mental or physical incapacity may now be included in the maximum hospitalization tax of \$30 which any one family is required to pay under the Regulations (L.G., Dec., 1948, p. 1440). A medical certificate must be furnished as proof of incapacity.

Such persons are still required to pay the adult tax of \$10 fixed in the earlier Regulations. The change, which was effected by an Order in Council (1858/48) of November 5, gazetted November 13, merely includes them in the family maximum payment.

Saskatchewan Vocational Education Act

The grant to every district maintaining a school which is either totally or partially devoted to vocational or technical education has been increased to \$5.25 per teaching day for each teacher employed, provided that the organization of the school, the courses given and the number of teachers employed have the approval of the Minister of Education. This change was effected by an Order in Council (1117/48) of July 5, gazetted November 27. An earlier order of May 30, 1947 (O.C. 912), also gazetted on November 27, 1948, raised the grant from \$3.50 to \$4.50.

NEW YEAR'S MESSAGE OF LABOUR LEADERS

(Continued from page 4)

and improve production" when given the opportunity to do so.

Discussing labour's interest in political action, Mr. Mosher asserted that "labour realizes that it cannot achieve its objectives through action in the economic sphere alone." That is the reason, he said, why labour "is devoting attention to political issues" and will endeavour to elect its own representatives to Parliament and to the Provincial legislatures.

Mr. Gerard Picard, General President of the Canadian and Catholic Confederation of Labour, after extending his good wishes to

the members of the Confederation and to "all working class people," asserted that during 1948 the CCCL had continued to make progress and that its social mission was becoming better understood by the workers. He held that "its future expansion is bound up with the convictions and the ability of all its officers and members, so that the fact may be more and more clearly demonstrated that Catholic social doctrines is not only of undeniable intrinsic value, but that it is, in practice, a real protector of the rights of other social classes." He declared that "its generalized application is the best guarantee of social peace."

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that the claimant had lost her employment by reason of her own misconduct within the meaning of the Act.—CU-B. 332 (February 25, 1948).

MATERIAL FACTS OF CASE:

The claimant, a single woman, aged 22 years, registered for work as a business machine operator, was last employed as such by a manufacturing company from September 3, 1942, to August 23, 1947, at a salary of \$110 a month.

On August 26, 1947, she made claim for benefit, stating that she had been discharged for cause on August 23, 1947, because she had refused to work after the regular working hours. The employer stated that the claimant was dismissed because she refused to work one evening.

The Insurance Officer disqualified the claimant, under Section 41 (1) of the Act, for a period of six weeks as from August 24, 1947, on the ground that she had lost her employment by reason of her own misconduct.

From this decision the claimant appealed to a Court of Referees. Further information from the employer was submitted by the local office, as follows:—

We draw to your attention that the claimant declared that one afternoon her foreman advised all the personnel to come back to work the same evening, she accepted, but she did not return to work. The next morning the claimant went to work as usual and was dismissed. She declared she had previously refused to work another evening. Concerning her personal discussions she declared that her foreman had no complaint to make concerning her work, but she added she hated her foreman and that as soon as this latter approached her to say anything to her she could not prevent herself from answering him in an abrupt manner. We communicated with the employer and were informed that there was no fault to find with the claimant's work and that if this latter had to have a discussion with her foreman she ought to have spoken to him privately and not in front of the other employees.

The Court, before which the claimant appeared, unanimously reversed the decision

of the Insurance Officer in a decision which reads in part as follows:—

We do not believe that the labour laws oblige a worker to work after the regular hours. There is nothing on the file to show that the orders were given to the claimant personally, they were of a general nature. There is nothing to show that the claimant had given any excuse to her employer refusing to come to work the evening in question, she simply neglected to report back. It is stated in the file that the applicant's dismissal followed her first and only refusal to come back to work one evening.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees.

DECISION:

The evidence indicates that the claimant received orders from her employer to report for overtime work in the evening. She stated before the court: "He (the employer) asked us to work that evening, he told everybody to work that evening."

The question resolves itself as to whether, under the circumstances, these orders were of a reasonable nature.

The decision given by the Court of Referees is based on the assumption that "they do not believe that the labour laws oblige a worker to work after the regular hours." This assumption is not founded.

Working overtime is a recognized practice in industry. The employees of the claimant's grade or class were asked to work on the evening in question from 7.30 to 10.00 for a remuneration of \$2. The claimant had worked overtime previously when required. She also had "missed other evenings before" but had "given her reasons." This time, she did not report for overtime work as requested and failed to offer any satisfactory explanation.

I consider that the orders issued to the claimant were not unreasonable and that she lost her employment by reasons of her own misconduct within the meaning of Section 41 (1) of the Act.

The appeal of the Insurance Officer is allowed but in view of the extenuating circumstances of the case, the claimant is disqualified for a period of one week as from the date that this decision is communicated to her.

Held that the claimant had not lost his employment by reason of his own misconduct within the meaning of the Act.—CU-B 340 (March 23, 1948).

MATERIAL FACTS OF CASE:

The claimant, a married man, aged 39 years, registered for work as a truck driver with secondary occupation of route salesman, was last employed as a street car operator from January, 1944, to September 11, 1947, at a wage of 80 cents an hour.

He made claim for benefit on September 13, 1947, stating that he had been laid off because he had had an accident. The employer stated that the claimant was dismissed for having too many accidents. The claimant stated at a later date:—

I had two accidents last year. One had \$200 worth of damage. This was a collision with an automobile. The second accident was also a collision with an automobile with a damage of \$10.

The employer stated later:—

The claimant was warned repeatedly for having too many accidents. He was finally dismissed when he backed the street car he was operating through the brick wall of our . . . street car barn, doing extensive and costly damage to the building and considerable damage to the street car when it was derailed. He is unsuited to street railway operation.

The Insurance Officer disqualified the claimant for a period of six weeks, under Section 41 (1) of the Act, as from September 12, 1947, on the ground that he had lost his employment by reason of his own misconduct.

From this decision the claimant appealed to a Court of Referees, before which he appeared, as well as a representative of the Union to which he belonged, and a representative of the employer. The Court upheld the decision of the Insurance Officer in a majority decision which reads as follows:—

The claimant was taken on by the employer, who signed as a temporary employee because he did not possess the necessary qualifications as to height, language and appearance. He was kept on nevertheless by reason of pressure being exerted on the Company as (the employer's representative) put it, but on the 11th of September, 1947, on the occasion of an accident, the result of which the car barn wall had been backed into and demolished, this according to the evidence was the culminating point of

record against the employee, where some 30 accidents had been reported during the course of his employment, five of which accidents were of a more serious nature and in which the claimant was held to be totally responsible. The claimant appears to have been repeatedly warned against this conduct and the last time was in August, 1946, when he was told that on the next happening of that nature, he would be dismissed. The claimant claims that the last accident happened when he had to wipe something out of his eye at the same time that he was backing his car. The majority of the Court deems that it was negligence on his part to do those two things at the same time. We have no particulars of the nature of the other four or five important accidents and while we do not think that anyone would deliberately bring about an accident, yet if responsibility has been assigned to the claimant for the last five accidents, and the claimant does not deny that, and in view of the record, then it is unreasonable to believe that an employer can put up indefinitely with such a state of things, and therefore the employee must be taken as having been dismissed because of his conduct during and affecting his employment. For those reasons, the claimant's appeal will be dismissed.

The Union appealed to the Umpire from the decision of the Court of Referees. The Umpire granted an oral hearing at the request of the Union, and two Union officials attended at the hearing, as well as a representative of the Commission.

DECISION:

The question to decide is whether the claimant lost his employment by reason of his own misconduct within the meaning of Section 41 (1) of the Act.

It is apparent that the claimant's work did not prove satisfactory to the Company during the whole period he was in their employ. According to the employer, he had too many accidents. When, finally, the claimant backed the street car he was operating through the brick wall of the street car barn, he was dismissed.

The employer, in his submissions, does not suggest that the claimant was guilty of wilful negligence; but to use his own words: "he (was) unsuited to street railway operation." Furthermore, it was admitted by the Commission representative, at the hearing, that in this case, it was more a question of inefficiency than one of wilful misconduct.

From the facts before me, I come to the conclusion that, whilst it is obvious that the claimant lacked that amount of ability which is essential in street car railway operation and, therefore, was to the knowledge of his employer unsuited for his employment, there is nothing in the evidence which shows that his carelessness

was so deliberate that it would amount to misconduct within the meaning of Section 41 (1) of the Act.

Under the circumstances, the majority decision of the Court of Referees is reversed and the appeal is allowed.

Unemployment Insurance Statistics* October, 1948

The Dominion Bureau of Statistics reports that claims for Unemployment Insurance benefit filed at local offices of the Unemployment Insurance Commission during October totalled 43,620 in October compared with 33,036 in September and 34,743 during October, 1947. Included in these totals are revised claims numbering 5,516 in October, 4,893 in September and 5,374 in October last year. A revised claim is recorded when, for any reason, it is necessary to reconsider an existing claim. Thus, initial and renewal claims, representing almost exclusively new cases of recorded unemployment among insured persons, amounted to 38,104 during October as against 28,143 in September and 29,369 in October, 1947.

At October 30 there were 55,384 (36,881 male and 18,503 female) ordinary claims on the live unemployment register compared with 44,761 (28,326 male and 16,435 female) on September 30 and 42,225 (27,195 male and 15,030 female) at October 31, 1947. Ordinary claims are those filed by insured persons who have been separated from their former employment either permanently or on the basis of a temporary layoff. In addition there were 4,460 (3,487 male and 973 female) other claims on the live unemployment register at October 30 as against 2,252 (1,688 male and 564 female) on September 30 and 3,102 (2,440 male and 662 female) at October 31 last year. "Other claims" are largely short-time claims filed by insured persons who have been put on short time at their places of employment.

The claimants on the live register at October 30 are classified, in Table E-6, according to the number of working days they have been continuously on the register since the last initial or renewal claim was filed and by sex and province. For this purpose neither casual work of a few days duration nor short spells of illness are counted. An initial claim that immediately follows the termination of a benefit year is ignored.

Claims disposed of during October numbered 39,660 including 181 special requests (that is requests for antedating,

extension of the two-year period and dependency rate of benefit) not granted and 983 claims referred to courts of referees. Of the balance, representing cases in which entitlement to benefit was the main question, 28,112 were considered entitled to benefit and 10,384 not entitled to benefit. Chief reasons as given by Insurance officers for considering claimants not entitled to benefit were: "insufficient contributions while in insurable employment" 3,120 cases, "voluntarily left employment without just cause" 2,813 cases, "not unemployed" 1,483 cases and "refused an offer of work and neglected an opportunity to work" 1,274 cases.

A total of 50,454 beneficiaries received one or more benefit payments during October, amounting to \$1,763,559 as compensation for 878,430 compensated unemployed days. This can be compared with 49,372 beneficiaries who were paid \$1,694,139 for 871,967 compensated unemployed days in September and 41,033 beneficiaries paid \$1,544,185 for 814,218 compensated unemployed days during October, 1947. Thus, the average duration of the unemployment compensated was 17.4 days in October, 17.7 days in September and 19.8 days during October last year. The average amount of benefit paid per beneficiary was \$34.95 during October, \$34.31 in September and \$37.63 in October, 1947. The average amount of benefit paid per compensated day of unemployment was \$2.01 in October, \$1.94 in September and \$1.90 in October last year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending October 30, 1948, showed 3,423,470 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1948, an increase of 81,469 since September 30, 1948.

As at October 30, 1948; 210,407 employers were registered representing an increase of 772 since September 30, 1948.

* See Tables E-1 to E-7.

WAGES, HOURS AND WORKING CONDITIONS IN THE FUR, LEATHER AND THEIR PRODUCTS INDUSTRIES, OCTOBER 1947*

Returns from 261 establishments, employing some 21,000 wage-earners and 2,000 office workers during the survey period, were used in this analysis. The majority of establishments in these industries reported having collective agreements in writing. Most common weekly hours reported were 40, but there were more workers on a 45-hour week; the five-day week was in effect in 163 of the establishments, which included 70 per cent of the wage-earners. Time and one-half was the most common overtime rate reported. The majority of establishments gave one week's paid vacation after less than a year's service and 100 of the establishments, employing 38 per cent of the workers, gave a maximum of two weeks.

THE FUR PRODUCTS INDUSTRY

Although the main activities in this industry are the manufacturing, remodelling and repair of furs, a smaller branch is the dressing and dyeing of furs which will be covered briefly at the end of the section.

Manufacturing, Remodelling and Repair

This branch of the industry mainly includes establishments manufacturing coats, furs and fur garments, along with retail fur stores who do remodelling and repair work as well as selling the manufactured product.

The 1947 index of wage rates in this particular industry has not shown as great

an increase over comparable rates in 1939 as was shown by the index of average rates for all industry. Within the industry, the last three years showed relatively large increases with an unusually large advance in 1947.

| Year | Index | Annual Percentage Change |
|-----------|-------|--------------------------|
| 1939..... | 100.0 | — |
| 1940..... | 105.3 | 5.3 |
| 1941..... | 113.7 | 8.0 |
| 1942..... | 121.7 | 7.0 |
| 1943..... | 127.3 | 4.6 |
| 1944..... | 130.5 | 2.5 |
| 1945..... | 140.5 | 7.7 |
| 1946..... | 150.7 | 7.3 |
| 1947..... | 170.5 | 13.1 |

* The information in this article was prepared from data obtained in the general annual survey of wage rates and hours of labour for 1947 made by the Research and Statistics Branch of the Department of Labour. Employers were asked to report on certain conditions of work, as well as to give, by occupation, their straight-time wage or salary rates or the average straight-time earnings of employees on piecework during the last pay period preceding October 1, 1947.

For a summary of provincial legislation on working conditions, see *Provincial Labour Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages and Workmen's Compensation*, an annual publication of the Legislation Branch of the Department of Labour.

Information compiled by industry from the 1947 survey returns has been published monthly in the *LABOUR GAZETTE* since the June 1948 issue; comparable data for 1946 on a number of other industries have been published monthly from July 1947 in the *LABOUR GAZETTE*.

Increases in Canada average rates by occupation in this industry in 1947 over 1946 varied from seven cents per hour in the case of finishers, female, to 19 cents per hour for machine operators, male. Detailed tabular data showing 1947 wage rates by occupations and region in this industry may be found on page 48 of Report No. 30—*Wage Rates and Hours of Labour in Canada, 1947*—issued as a supplement to the October *LABOUR GAZETTE*.

In making an analysis of working conditions in this industry, returns from 78 establishments employing some 1,800 workers during the survey period were used, as shown in Table I. Less than 25 workers were reported employed in each of 58 of the establishments and averaged 15. The

five largest establishments employed between 75 and 100 workers each, averaging 83.

Collective Agreements.—Of the 78 establishments, 53 reported having collective agreements in writing covering a total of some 1,300 workers.

One thousand of the workers in 43 of the establishments were under agreements with the International Fur and Leather Workers Union (CIO-CCL) and another 230 employees in eight establishments had agreements with the Fur Workers' Union, directly chartered by the American Federation of Labour. The other two establishments reported agreements with local branches of the Canadian and Catholic Confederation of Labour.

Standard Hours of Work, Table II.—Weekly hours ranged between 37½ and

48. Fifty-eight of the 78 establishments, employing 80 per cent of the workers were on a 40-hour week. The 12 establishments on a 44-hour week accounted for 11 per cent of the workers.

The five-day week was in effect in 53 establishments, employing 1,410 of the workers. All but one worked an 8-hour day, Monday to Friday; the exception, on a 7½-hour day, was closed all day Wednesday.

Of the 25 establishments on a 6-day week, only two worked six full days of eight hours each. Daily hours in the remaining 23 ranged between 7¼ and 9 hours with the half-day hours varying between 2½ and 4½ hours. Four of the establishments reported working their half-day on Wednesday and the others, Saturday.

| | | | | | | | 39 |

(1) Includes one establishment operating on a 43-hour week, employing 12 workers.

Overtime Rates of Pay, Table III.—

Most of the establishments reported paying rates providing for premium payment for overtime during the work week. More than fifty establishments, employing at least two-thirds of the workers, reported time and one-half for overtime after daily or weekly hours had been worked and six establishments paid time and one-quarter.

Little information was given for overtime on Sundays and holidays. Double time was reported for Sunday work in three instances and this same rate was reported by eight establishments for holiday work; another seven reported rates of either double time and one-quarter or double time and one-half.

Of the 53 establishments on a five-day week, 40 reported paying time and one-half for all Saturday work or for work done after weekly hours had been worked. Four

reported time and one-quarter for all Saturday work, another paying this rate after weekly hours. Three reported regular rates and the remainder gave no rates.

Vacations with Pay, Table IV.—All of the establishments reported a paid vacation of one week after a year or less of service, in most cases after six months or less.

The 55 establishments reporting a two-week vacation employed more than two-thirds of the workers. The length of service required for this vacation ranged from eight months to five years with most of the establishments and workers coming under the one-year requirement.

Statutory Holidays, Table V.—All of the establishments reported observing from three to 14 statutory holidays. Payment was made, in all but one case, for from one to 13 of the holidays observed.

TABLE III.—OVERTIME RATES OF PAY FOR WORKERS IN THE FUR MANUFACTURING, REMODELLING AND REPAIR INDUSTRY, 1947

NOTE:—One establishment with 31 workers paid a flat rate of 50 cents per hour for all overtime.

(1) Includes one establishment with 100 workers paying 2½ times the regular rate.

About one-half of the establishments observed as well as paid for seven or eight holidays. Establishments paying for these holidays employed 50 per cent of the workers.

Fur Dressing and Dyeing

Returns from ten establishments have been used in the analysis of working conditions in this section of the fur industry. Five of these were located in the province of Quebec, four were in Toronto and one in Winnipeg. Total employment was 930, made up of 700 male and 170 female production workers and 60 office employees. Establishments varied in size from one employing 20 workers to another with slightly over 300 workers; seven of the establishments, employing between 50

and 100 workers each, averaged 73 per establishment.

Collective agreements in writing were reported by nine of the establishments, covering 650 workers. The majority had agreements with the International Fur and Leather Workers' Union (CIO-CCL). One establishment was under agreement with a directly chartered union of the American Federation of Labour and another reported an agreement with a union of the Canadian and Catholic Confederation of Labour.

There are no published wage rates of occupations in this branch of the fur industry.

All but one of the establishments were on a five-day week of 40 to 50 hours; the exception worked a 44-hour week with four hours on Saturday.

TABLE IV.—VACATIONS WITH PAY IN THE FUR MANUFACTURING, REMODELLING AND REPAIR INDUSTRY, 1947

| Total..... | 78 | 1,802 | 23 | 564 | 55 | 1,238 |

(1) Includes two establishments with 60 employees requiring four months' service.

(2) This establishment reported an initial vacation of two weeks after eight months' service.

(3) Three establishments employing 52 workers required two years' service and three with 60 workers required five years' service.

For overtime during the week, time and one-half was reported in all but one instance, in which case time and one-quarter prevailed. Sunday overtime was reported at the rate of time and one-half in seven instances and time and one-quarter or double time by another two establishments. The same conditions obtained for holiday work except in one establishment where double time was reported for holiday work rather than time and one-half as in Sunday work.

An initial vacation with pay of one week was reported in three cases after a service of six months and the remainder gave this same vacation after one year. Three of the establishments, employing 145 workers, who gave one week after one year allowed two weeks after five years.

All establishments observed between five and eight statutory holidays. Four of the establishments, employing 500 of the workers, paid for only one of the holidays observed; another paid for two; four establishments, employing 200 workers, paid for three, and the remaining one paid for five days.

THE LEATHER AND ITS PRODUCTS INDUSTRY

The Leather and Its Products Industry is divided, for the purpose of the following analysis, into two main parts, namely Tanning and the Manufacture of Boots and Shoes which will be dealt with separately.

The index of average wage rates for these two groups combined showed an

The Leather Tanning Industry

By 1947, average wage rates in this industry had increased well over 100 per cent since 1939. Relatively large annual increases took place from 1941 to 1943 although the increase recorded in 1947 exceeded any of these.

| Year | Index | Annual Percentage Change |
|-----------|-------|--------------------------------|
| 1939..... | 100.0 | — |
| 1940..... | 104.5 | 4.5 |
| 1941..... | 119.5 | 14.4 |
| 1942..... | 133.9 | 12.1 |

| 1944..... | 156.8 | 5.3 |
| 1945..... | 167.0 | 6.5 |
| 1946..... | 181.1 | 8.4 |
| 1947..... | 215.7 | 19.1 |

Seven of the ten main occupations in the leather tanning industry showed increases of from 12 to 16 cents per hour in 1947 over 1946; for labourers, the increase averaged only eight cents, while the average of 94 cents per hour received by stokers and softeners in 1947 represented an increase of 21 cents. A table showing average rates for 1947 in this industry by occupation and by area may be found on page 49 of Report No. 30, *Wage Rates and Hours of Labour in Canada, 1947*, issued as a supplement to the October, 1948, issue of the *LABOUR GAZETTE*.

As shown in Table VI, returns from 39 tanneries employing some 4,400 workers during the survey period were used in this analysis of the industry. Of the four establishments in Western Canada, two were in British Columbia, one was in Manitoba and the other, in Saskatchewan. Ten per cent of the tannery workers were females.

One-half of the tanneries, accounting for 49 per cent of the workers, employed

between 50 and 200 workers each, averaging 100 per establishment. Seven others employed between 200 and 500 with an average of 320 each.

Collective Agreements.—Twenty-nine of the 38 establishments reported having collective agreements in writing and these covered 83 per cent of the plant employees. Most of the Quebec tanneries were under agreements with local branches of the Canadian and Catholic Confederation of Labour. In other provinces the workers were covered by agreements with the National Union of Shoe and Leather Workers (CCL) or the United Leather Workers International Union (AFL).

Standard Hours of Work, Table VII.—Weekly hours ranged between 40 and 55, with 16 establishments and 52 per cent of the workers on the most common schedule of a 45-hour week. Another seven establishments and 23 per cent of the employees were working either 47½ or 48 hours per week. The nine establishments working shorter hours than 45 accounted for 14 per cent of the workers. Eleven per cent worked longer than 48 hours per week.

Twenty-six of the 39 tanneries were on a five-day week of eight to ten hours per day, these establishments including 72 per cent of the tannery workers.

Overtime Rates of Pay, Table VIII.—As indicated by the table, the great majority of the workers were in tanneries reporting time and one-half for overtime. This was the only overtime rate reported which provided premium payment, with the exception of a few establishments paying double time and in one case, double time and one-half.

Of the tanneries working a five-day week, 21 paid time and one-half for Saturday work, in 13 cases after daily hours had been worked and in the remaining eight, after weekly hours. Three reported straight time and two did not report the rates they would pay if overtime work were necessary.

Vacations with Pay, Table IX.—All of the establishments whose returns were used in this analysis reported at least one week's paid vacation after a year or less of service. In 20 cases, one week was the maximum length of vacation reported and 30 per cent of the total number of workers were employed in these establishments. The remaining employees were in 19 tanneries reporting a vacation of two weeks after a service period ranging between one and 15 years, mainly after five or ten years.

Statutory Holidays, Table X.—Thirty of the tanneries, accounting for 82 per cent of

The Boot and Shoe Industry

Wage rates for this industry, as indicated by the index, had increased 94.2 per cent by 1947 over comparable rates in 1939. The largest annual increase was recorded in 1947.

| Year | Index | Annual Percentage Change |
|-----------|-------|--------------------------------|
| 1939..... | 100.0 | — |
| 1940..... | 106.2 | 6.2 |
| 1941..... | 123.2 | 16.0 |
| 1942..... | 135.0 | 9.6 |
| 1943..... | 141.7 | 5.0 |
| 1944..... | 142.6 | .6 |
| 1945..... | 150.1 | 5.3 |
| 1946..... | 164.0 | 9.3 |
| 1947..... | 194.2 | 18.4 |

Wage rates in 1947 for the principal occupations in the Boot and Shoe Industry in Canada were 11 to 16 cents higher than in 1946. Increases for stitchers, male and female, averaged 11 cents per hour; machine operators and treers showed an increase of 13 cents over 1946, with a rise of 16 cents in the average rate for sole layers. For details of 1947 average rates by occupation and by area, see page 50 of Report No. 30, *Wage Rates and Hours of Labour in Canada, 1947*, issued as a supplement to the October, 1948, issue of the LABOUR GAZETTE.

In making this analysis of working conditions, returns from 134 boot and shoe factories, employing some 13,800 factory workers at the time of the survey, were used (Table XI). More than one-half of the factories and workers were located in the province of Quebec.

Of the returns used, the size of the establishments ranged between seven factory workers in one plant to another employing over 500 workers. Eighty-seven of the 133 factories employed less than 100 workers each and averaged 51. Fifteen factories employed more than 200 workers each and these averaged 320 per factory.

Collective Agreements.—Generally speaking, Quebec factories came directly under the Joint Committee of the Boot and Shoe Industry which was established under the Quebec Collective Agreement Act. Workers of several Quebec factories were under agreements with local branches of the National Federation of Leather and Shoe Workers of Canada, affiliated with Canadian and Catholic Confederation of Labour, the Boot and Shoe Workers Union (AFL-TLC) or an independent union, "L'Association des Travailleurs en Chaussures Inc."

The two main unions represented in this industry in Ontario and Western Canada (18 establishments and 1,800 workers) were the National Union of Shoe and Leather Workers (CCL) and the Boot and Shoe Workers Union (AFL-TLC). Other than these two unions, there were a few employees' associations, a directly chartered union of the AFL, and two factories under the Shoe Workers Union of the International Union of Fur and Leather Workers (CIO-CCL).

Standard Hours of Work, Table XII.—Weekly hours ranged between 40 and 50; the most common hours reported were 45 and 48 with 82 factories and 8,600 workers on either of these schedules.

Fifty-seven per cent of the factories and nearly two-thirds of the workers were on a five-day week of eight to ten hours. One-half of the factories and 57 per cent of the workers on this weekly schedule worked nine hours per day.

All but four of the factories working on six days of the week were in operation between three and five hours on Saturday; the four exceptions reported an eight-hour Saturday.

Overtime Rates of Pay.—Since reports from the great majority of factories indicated that no overtime was worked, no tabular data has been shown. The most common rate, reported by 45 factories, was time and one-half after weekly hours had been worked; this rate was usually after 48 hours in the week although several of these factories reported working a standard week of from 40 to 49 hours. One factory, employing 130 workers, reported double time for overtime on Sundays and holidays.

Vacations with Pay, Table XIII.—All of the companies reporting paid vacations gave at least one week after a year or less of service.

Although the majority of plants gave a maximum vacation of one week, 23 factories employing 3,400 workers reported giving two weeks, after one month to five years of service, mainly after one year.

Statutory Holidays, Table XIV.—All but one factory reported observing from three to 15 statutory holidays. Three-quarters of these factories, employing 70 per cent of the workers, did not pay for the holidays observed and those who did, observed between four and 11 and paid for one to 11. One-quarter of the total number of workers were paid for four to eight of the observed holidays.

An analysis of the current employment situation prepared by the Research and Statistics Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

CURRENT EMPLOYMENT CONDITIONS

Basically sound employment conditions continued throughout November, although the seasonal segment of industry was now slackening and forcing hundreds of workers into the employment market. Some of these workers were experiencing difficulty in finding jobs and the number registered with the National Employment Service had risen to 140,000 by the end of November. Reduced logging activity had prevented many from obtaining their usual employment in the woods this year. Apart from the seasonal aspect, however, employment forecasts recently prepared by the Department of Labour indicated that Canada may look forward to sustained economic activity with attendant high employment at least until the end of the first quarter of 1949.

The over-all employment situation continued favourable during November, although a temporary surplus of workers had begun to develop with the decline in seasonal activity. The number of applicants registered at employment offices mounted rapidly with 140,000 on file at the end of the month. This represented an increase of 38,000 during the November five-week period. Farm workers, and numerous unskilled labourers from railway, highway, and other construction work were now looking for winter work. Many had already found jobs in logging, mining, and various types of heavy industry but opportunities in these industries were now very scarce. The log cut was substantially lower than last year because of heavy pulpwood inventories and uncertain foreign markets, and the consequent decline in job opportunities made the seasonal outlook somewhat cloudy for the next few months.

Apart from seasonal influences, however, the trend in employment is still upwards in most industrial groups, according to forecasts made by the Department of Labour on the basis of opinions of leading businessmen. Nevertheless, the expansion of employment during the six months ending April 1, 1949, will be on a much smaller scale than that which prevailed since early 1946. In part, the slower expansion rate will be caused by a softening of the domestic market, as in the case of radios and household furniture, and by declines in the export market, which will affect ship-

building and sawmills. In certain other industries, increased production resulting from expanded capacity and new machinery has intensified competition, and employers are laying off workers in some instances.

The industrial relations record for 1948 has been very satisfactory. By the end of November, new agreements had been successfully negotiated in nearly all leading industries with a minimum of strike action. Time lost through strikes to date in 1948 had amounted to only one-third of the loss sustained in the same period last year. Only 37,000 workers had been involved in strike action as against 94,000 in the same period last year and 137,000 in 1946. Wage increases were granted in many industries, with labour income showing a gain of 14 per cent over the comparable 1947 total.

Agriculture

Demand for farm workers was negligible during November and many hands had left to find jobs in the city and the bush. Others, having completed their fall ploughing, had turned to fuel cutting on their own land. The two-year contract to engage in agriculture expired for approximately 3,000 Polish veterans during November. From a questionnaire sent to these men to ascertain their intention concerning employment, it was found that, of the 1,700 who answered, 57 per cent intended to remain in agriculture although 14 per cent of these will withdraw from farm work during the coming winter.

An interesting study was recently made by the Department of Agriculture on the trend toward mechanization in agriculture, and its resultant effects on labour requirements. It was pointed out that higher cash and net income accruing to Canadian farms in recent years has led to increased purchase of farm machinery. Sales of such items as combines, hay balers, tractors, corn pickers, forage crop harvesters, have increased sharply in the past few years. This has had a marked effect on reducing the labour required for certain operations. For instance, the man-hours required per ton for handling hay by a new type of hay baler are estimated at 2.4, as compared with 3.5 for hand loading and 2.5 hours where a hay loader was used; corn picking machines reduced the man-hours required by over 50 per cent as compared with hand labour.

Non-Agricultural Industry

The index of industrial production during the month of September had already increased to 183.3 (base 1935-39=100) and if the seasonal pattern of 1947 is followed industrial production will continue upward, to reach its peak in October. Employment in general usually traces a similar pattern. At October 1, the index of reported industrial employment, as published by the Dominion Bureau of Statistics, reached 202.6, based on the year 1926 as equalling 100. This index compared with 201.8 at the beginning of September.

Wage boosts and longer hours of work during September noticeably augmented the weekly earnings of hourly paid workers in manufacturing. During the same month, the cost of living remained stationary; as a result, real wages of manufacturing employees increased appreciably over the period. The preliminary index of real wages (av. 1946=100) stood at 104.3 at the beginning of October.

Logging employment was reaching its seasonal peak during November. Current operations, however, were considerably below the record levels attained during the 1947-8 season. The drop was chiefly attributed to three factors: the large inventories of pulpwood accumulated by heavy cutting in the winter of 1947-48; reduced orders for timber from the United Kingdom, resulting in a smaller cut in the Maritimes and the Gaspé; the break in prices for lower grade lumber, which was especially felt in British Columbia.

Little difficulty was experienced in recruiting sufficient woods labour in Eastern Canada this season. Suitable workers

appeared to be in good supply in almost all areas with some camps reporting a surplus of help. Labour turnover had dropped markedly. Excellent cutting weather had enabled work to proceed rapidly and some operators were already completing their cutting schedules. A ten per cent wage increase was granted to 30,000 pulpwood workers in Northern Ontario at the beginning of the season, but in some parts of Quebec wage cuts had taken place.

Slackening in general activity in British Columbia during October and November had increased the supply of workers available for woods work and few openings were now available. The logging work force was also more stable with fewer persons shifting from job to job within the industry. The latter development was partly accredited to the recent wage increases, although the growing scarcity of jobs elsewhere also was a factor.

Labour demand in the **mining** industry during the fall of 1948 was lower than at any time for several years. Although the industry as a whole was working at capacity, most mines reported that they were now adequately staffed. This condition was general in all regions and applied to all three types of mining, coal, metallic, and non-metallic. Displaced Persons had done much towards easing the situation with 278 entering during November, bringing the number absorbed by the industry to 2,532.

Indications were that mines were becoming more selective in their labour requirements, both in regard to labourers and to qualified miners. Only a light demand existed during November for beginners and labourers. Labour turnover was much lower and this kept replacement vacancies numerically small. In addition, hydro-electric power shortages had caused some interruptions in production in northern Quebec and Ontario mines, and hiring activity had shown a greater than seasonal decline.

Average weekly wages in the mining industry topped all other industrial groups with the exception of the transportation industry. Average weekly wages totalled \$50.91 in mining at the beginning of October as against an average of \$41.67 for the nine leading industries in Canada. Within the mining industry itself, the weekly pay ranged from the high of \$53.41 in metallic ores to \$45.83 in the non-metallic group.

In the **manufacturing** industries, the shortage of hydro-electric power in Ontario and Quebec spotlighted the industrial picture during November. While actual lay-offs were few in number and of short

duration, many firms were forced to revise working schedules to include week-end work and night shifts. Some firms installed generating plants to meet the emergency. By the end of the month, however, and owing to heavy rainfalls, the situation had greatly improved, and in most areas it was expected that power restrictions would be eliminated for the remainder of the year.

Employment in manufacturing was running about four per cent above 1947 levels. Among the various sub-groups indicating the most extensive increases in employment over the year were primary iron and steel, agricultural implements, artificial silk and silk goods, and beverages. Slight decreases were reported in leather, furniture, rubber, automobiles, and steel shipbuilding and repairing.

On the average, weekly earnings had increased by more than \$4 during the past year. In several industries, earnings at the beginning of October were at or near the \$50 mark. Included in the higher-paying industry groups were employees in non-metallic mineral plants (\$52.31); automobiles (\$53.65); primary iron and steel (\$51.17); and pulp and paper (\$57.04).

The 1948 **construction** season was drawing to a close during November, setting another record year both in volume of work completed and in the number of workers employed. At the seasonal peak, nearly 325,000 persons were reported as working in the industry. The value of contracts awarded in the first eleven months of the year totalled \$898 million, an increase of \$215 million over the same period in 1947.

Reports received from all regions during November indicated that contractors throughout the country were rushing their jobs to completion and finishing off outside work before freeze-up. Many projects were being roughed in so that interior work could be carried on during the winter months. Exceptionally fine weather in all regions but the Pacific during November allowed work to be carried on at a very high level. Highway construction was generally completed before the end of the month. The demand for unskilled labour slackened during November but skilled workers were still being hired.

Although the general average of earnings reported by the Dominion Bureau of Statistics for highway, railway and building construction and maintenance at October 1 stood at only \$40.41, this was appreciably lower than that received by persons in the specialized construction trades. The following are estimates of hourly wage rate ranges in the more important construction trades

in the larger cities during the fall months of 1948: bricklayers, \$1.40-\$1.75; carpenters, \$1.25-\$1.55; electricians, \$1.35-\$1.75; painters, \$1.15-\$1.45; plasterers, \$1.40-\$1.80; plumbers, \$1.11-\$1.60; labourers, common, \$0.70-\$0.90; labourers (skilled) \$0.85-\$1.

Trade establishments were entering their busy season as Christmas shopping was getting under way. Orders for temporary help were coming into employment offices although the reporting was not heavy. The general expansion of staff which had taken place since the end of the war was expected to enable many stores to handle the Christmas rush without a large increase in the working force. The heaviest labour requirements for the coming season appeared to be in the larger department stores.

The mild weather this fall was reflected in slow movement of goods in some lines. Fuel and clothing stocks were particularly affected with few of the usual fall and winter purchases taking place. Fruit and vegetable sales, however, had improved as United States produce again entered the market; at the beginning of November, the embargo which had been in effect for almost a year was removed on many of the restricted items.

Service industries were benefiting from the increased flow of workers and as a result labour requirements in many restaurants and hotels had fallen off appreciably. Hospital sub-staffs also had relatively few labour needs, although the chief factor causing the improvement here had been the absorption of Displaced Persons. The entrance of immigrants into domestic service, however, had not as yet materially reduced labour needs. The shortage of permanent domestic help is still great with many of the successful placements tending to strengthen the number of requests for such help. Almost 6,000 domestic workers, including all classes of service workers, had been brought to Canada from European camps by the end of November.

Demand for temporary Post Office clerks and carriers increased during November in anticipation of the Christmas rush. Preference was being given to veterans wherever possible.

Employment Service Activities

In line with the seasonal trend, registrations at employment offices were rapidly increasing in number. The majority of those registering in October and early November had passed through the offices to jobs in logging, mining, construction, and heavy industry. By mid-November,

however, most industries had obtained their complement of workers, and applications on file were speedily mounting. At December 2, the number unplaced totalled 140,000, indicating a 38,000 increase for the November five-week period.

Persons applying for work during November were largely in the unskilled categories. Mild weather had sustained outdoor activity remarkably well and as a result skilled tradesmen in construction, and water and highway transportation were still on the job. Construction labourers, however, were being released since few projects were begun during the month; the earlier stages of construction provide the bulk of work for unskilled help. Many farm workers were still on file; the dearth of logging openings this year had decidedly slowed down the absorption of these workers. Extra gang labourers from railways now being released were also seeking manual work.

Scattered lay-offs occurred in the seasonal segment of some manufacturing industries, particularly food, pulp and paper, and sawmills. Softening market conditions in sawmill operations accentuated the seasonal decline with lay-offs tending to be larger and of longer duration than in 1947. Hydro-electric power shortages caused some lay-offs in Central Canada, although workers were being re-hired by early December. Inefficient staff was being weeded out in some establishments and this added to the stream of those entering employment offices.

Jobs suitable for the class of applicant available at employment offices had fallen off markedly. Logging, which usually offers a strong support for winter employment, was operating at a much lower level. During the three heaviest recruiting months for woods work—August, September and October—22,000 openings were received at employment offices as against 43,000 in the same period in 1947. This had particularly affected the Province of Quebec where logging is a very important source of winter employment. Hiring of construction workmen had been falling off since early in November. The mining industry had satisfied its demands earlier in the season and hiring was now negligible. Manufacturing firms in general were adequately staffed in the unskilled and semi-skilled classifications.

Full employment continued for practically all tradesmen, however. Trained workers who did enter the labour market were usually readily placed. If jobs could not be found locally, the workers were usually quickly paced through clearance. Neverthe-

less, the easier labour situation had brought about a tightening in employers' specifications for help, and some workers, who previously would have fallen into the classification of skilled men, will now be grouped among semi-skilled workers.

Indicative of the easier situation, not only did placements drop off but fewer hirings were of a permanent nature. Placements of more than seven days duration had dropped to 85 per cent of all hirings during October. In August, they had accounted for 82 per cent.

The current situation showed a marked deterioration over that of 1947. Unplaced applicants were already 17,000 higher than in the previous year, with the level reported at the November month-end comparable to that at the end of December, 1947. Unfilled vacancies had fallen to the lowest level in the history of National Employment Service. This statistical picture, however, gave only a limited view of the complete employment situation. Although the seasonal outlook was somewhat cloudy, nevertheless employment was running at higher levels than ever before for the season. A survey of leading business men undertaken by the Department of Labour indicated that aside from the seasonal aspect, employment would continue to push cyclically upward during the first quarter of 1949.

Because of the current need for job-orders, the work of the **Employer Relations Section** of the Employment Service is of special importance at this time. Having developed since the end of the war, the Employer Relations Section was created specifically to be the liaison between the Service and employers. All employers' orders (excepting Special Placements) are received through this section. A field staff, which visits employers regularly, supplements the contacts by telephone and mail. Visits are timed both to check regularly on employers' needs and to take account of seasonal requirements and emergency demands.

In order to obtain the greatest number of orders, soliciting of jobs is concentrated mainly on the largest employers of labour. As the winter season approaches, seasonally active industries such as transportation companies and municipal offices are visited regularly in order to obtain orders for snow shovelling and street cleaning work. The progress of industrial projects is carefully watched in order to uncover potential jobs. This aspect of the work is particularly important at this time when many new plants are reaching the completion stage.

Demand for workers in itself is still relatively elastic. If a promising worker is available, many employers are willing to hire him although no particular vacancy may exist in the industry. Employer relations officers consequently endeavour to create vacancies by working back from the applicants registering at the office. Applicants on file and in clearance are carefully scrutinized by the officers and outstanding applications are brought to the notice of interested employers.

Employment offices during the fall and winter months are faced with the fact that, with the competition for jobs increasing, more workers will supplement their application at employment offices with a direct approach to employers. To counteract this tendency, employer relations officials recognize that it is increasingly important at this time to "sell" the Service to employers.

A large proportion of the applicants registering at employment offices were claiming unemployment insurance, although during October, the latest month for which statistics are available, benefit payments were still at a low level. During the month, 50,000 persons received benefits under the Unemployment Insurance Act. At the end of the month there were 55,000 (before qualification for benefit had been determined) claims for payment on file.

Placements were falling off at **Executive and Professional** offices but since fewer persons were registering for work the number unplaced remained at approximately the same level throughout November. At November 25, the latest date available, 2,128 men and 437 women were unplaced at the five regional offices.

Offices reported that in general industry was fairly well staffed in regard to administrative and executive personnel. Orders being reported stipulated high qualifications and employers were willing to wait for suitable help rather than accept a poorly qualified worker. Uncertainties surrounding the hydro-electric power situation had deterred the reporting of jobs in some firms in Ontario. Requirements in the administrative field were relatively small with staff changes now being postponed to some extent until the New Year. At the end of November, unfilled vacancies at Executive and Professional offices totalled 1,077.

The campaign to find jobs for university students for the summer of 1949 was now well under way. Students were already being registered in most universities and, except in a few instances, registrations were expected to be completed before Christmas. Early in December, some 12,000 employers

were being canvassed by mail to report openings which would be available for graduates and under-graduates when the university year ends. It was estimated that in the 1947-8 season 5,000 permanent and 18,000 summer jobs were obtained for university students through the efforts of the Executive and Professional and local employment offices.

Regional Analysis

The labour surplus in the **Maritime** region was seasonally increasing during November. Construction work had begun to taper off, although mild weather had extended the season well on into November. Agriculture was very slack and many workers had moved to the cities to find work. Nevertheless, employment conditions were more favourable than at the same time last year, despite the fact that opportunities for seasonal workers in logging were considerably fewer.

Logging activity was being carried on at a much reduced scale this year and employment had dropped accordingly. The uncertain market for soft lumber and the general expectation of falling prices were largely responsible for the slack. Seasonal lay-offs in the industry were expected to begin by the end of December as some operators anticipated completing their schedules by that time.

In the transportation industry, however, the outlook was bright. Port activity particularly showed an advance during November. The difficult situation caused by the diversion of ships to Halifax from strike-bound United States ports cleared up by the end of the month, after giving rise to decisions and counter-decisions concerning their unloading (see p. 53). Winter activity was expected to be carried on at a high level. As usual, all wheat shipments would be passing through the ports of Halifax and Saint John after ice closed the port of Montreal early in December. This year the outlook was further brightened with the announcement of several new sailings being planned for the Maritime ports.

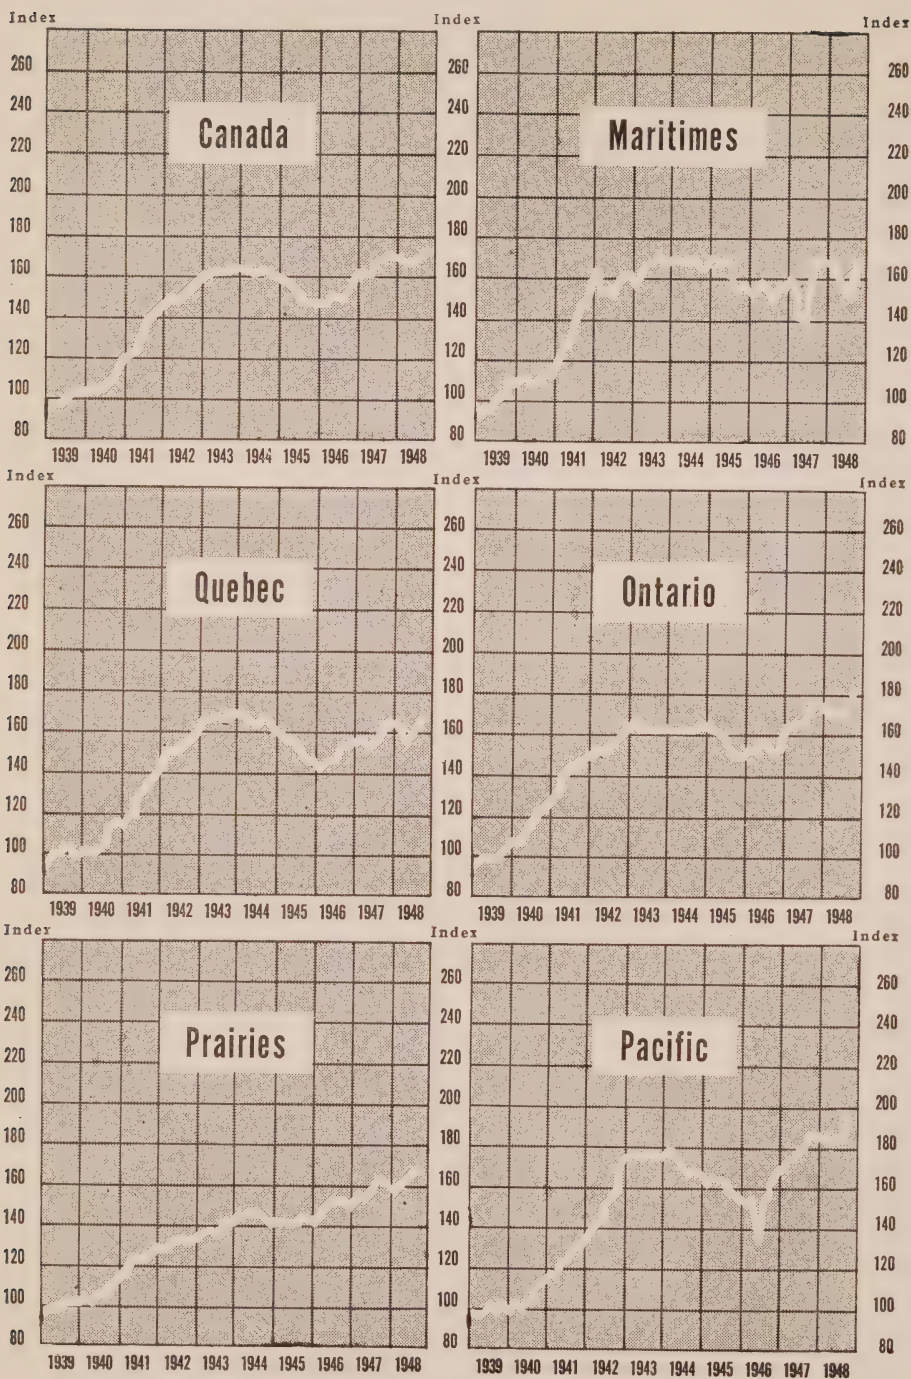

Coal mines were operating steadily but no expansion in employment was expected until the collective agreement at present under negotiation has been signed.

Employment in the **Quebec** region was well sustained for the time of year in all industrial groups except logging. The decline in woods work had materially affected the number registering for work at employment offices and unplaced applicants at the beginning of December were

REGIONAL EMPLOYMENT TRENDS

Average: 1939=100

Seasonally Adjusted

8,000 higher than at the same time last year. However, apart from the current difficulty of finding jobs for the seasonal workers who normally turned to woods work, employment conditions were basically sound. The labour force had increased to a greater extent in Quebec than in all other regions during the past year. This was attributed to the addition of Maritime workers and immigrants, as well as the normal growth in population. Most of these workers filled specific industrial needs and enabled the expansion of industries where suitable labour had previously been unobtainable.

The hydro situation improved somewhat toward the end of November as rainfalls raised the water level and eased the shortage of power. Mining areas substituted diesel power and thus maintained production. The aluminum industry at Chicoutimi however, was more seriously affected and lay-offs occurred.

Employment in manufacturing was generally steady. Textile plants showed increased employment with labour turnover at its lowest level in several years. Heavy industry was very active; locomotive contracts for one large Montreal firm guaranteed full employment of its present staff until the end of 1949. Shipbuilding in Sorel continued at full strength but winter lay-offs were scheduled for December. Meat-packing plants were past their seasonal peak and plants were not hiring replacements.

In the *Ontario* region, mild weather had sustained construction activity at a high level but had adversely affected many industries by prolonging the hydro power shortage. The downward seasonal movement in employment increased during November although employment conditions in general were still good. All industries but logging had expanded employment over the past year.

The shortage of hydro-electric power had brought about comparatively few lay-offs, although there was some loss of production and hours worked. By the end of the month, most firms had adjusted working hours or working days to meet the emergency. Labour demand was affected as few firms were hiring more workers while the shortage continued. Heavy rainfalls at the end of the month and greater use of diesel-operated generators had greatly eased the situation, and most power cut-offs were relaxed early in December.

Manufacturing firms were working at capacity where power and material supplies would permit. Steel shortages prevented

further expansion in some plants. The automobile industry at Windsor was re-tooling machinery for the 1949 models and the usual lay-offs were in progress; at Oshawa, similar large lay-offs were scheduled for December but re-hiring would begin progressively within a month.

The navigation season on the Great Lakes was due to close on December 15, and demand for seamen was light by the end of November. Activity was greatly accelerated during November as insurance rates on grain shipments would rise on December 1, and shippers were endeavouring to get shipments through to avoid the extra cost.

Normal employment conditions were reported for the *Prairie* region during November. Workers were moving into cities from rural areas and general labour requirements in most industries were now easily filled. Meat-packing plants were well staffed for peak operations. Flour mills were working at capacity and no further shutdowns were anticipated despite the weakness in export markets.

Farm labour demand was slight. The Polish veterans, with specialized skills, who had completed their two-year contract in agriculture were gradually being filled into their own trades. A fair number were remaining with their present employer while others were leaving farm work for the winter with the intention of returning in the spring.

Construction activity held up remarkably well, owing to unusually mild weather. Projects already closed in will maintain a good volume of employment for skilled tradesmen during the winter. In view of the predicted power shortage, the Manitoba Government will undertake the construction of a \$20,000,000 power project at Pine Falls on the Winnipeg River. This project will be completed in 1952 and will provide employment for about 600 men.

The usual seasonal decline in employment was well under way in the *Pacific* region during November and the labour surplus rose sharply. Construction, fishing, and logging were slowing down for the winter months. In addition to these normal trends, weak market conditions forced small logging operations to close at an earlier date, and caused cut-backs in sawmill and shingle mill employment during November. In addition, the influx of transient workers from the Prairies was still heavy, despite newspaper publicity as to employment conditions during the winter season.

The labour surplus was concentrated primarily in the urban areas. Vancouver and New Westminster accounted for 72 per cent of all unplaced applicants in the region at the end of November. The British Columbia Government was concerned with the possibility of decentralizing business and industry. Approximately 80 per cent of the population of the Province is centred in the lower mainland near Vancouver and the

southern part of Vancouver Island; the trend in this direction has been intensified during recent years, especially toward greater concentration of industry and population near Vancouver. Governmental plans were aimed at developing the industrial wealth of the hinterland and encouraging settlement to ease the congestion in the southwest section of the Province.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

There was no change in Canada's official cost-of-living index between October 1 and November 1. This interruption came after a series of 21 consecutive increases dating from January, 1947.

The Dominion Bureau of Statistics places the November 1 index at 159·6, unchanged from October 1, but 16·0 points above November 1 last year. From August, 1939, to November this year the increase was 58·3 per cent.

The food index fell from 205·4 on October 1 to 204·7 on November 1 as declines in meats and vegetables overbalanced further increases in egg prices; other food groups showed no appreciable changes. The decline in foods exactly balanced small advances in four other budget groups.

Home furnishings and services moved up from 165·1 to 166·0, clothing from 181·0 to 181·5, fuel and light from 128·8 to 129·0,

and miscellaneous items from 124·4 to 124·6. The rent series is computed at approximately quarterly intervals and the next reckoning will be for December 1; the latest figure is 121·0.

Cost of Living in Eight Cities

Cost-of-living index movements for eight regional cities were mixed between October 1 and November 1, 1948. Higher food indexes were recorded for the Prairie cities while at other centres losses occurred. Among other groups, higher index levels predominated for clothing and home furnishings and services and at a few centres several sub-sections of the miscellaneous index were higher also. Composite city index changes between October 1 and November 1 were as follows: Halifax -0·2 points to 152·0; Saint John -0·2 to 156·2; Montreal -0·6 to 162·5; Toronto -0·2 to 155·2; Winnipeg +0·2 to 153·0; Saskatoon +0·5 to 162·3; Edmonton +0·3 to 154·2 and Vancouver -0·2 to 161·1.

* See Tables F-1 to F-6.

COST OF LIVING AND WHOLESALE PRICES IN CANADA FROM JANUARY 1914 TO DATE

(Base 1935-39=100)

Wholesale Prices, October, 1948

The general index of wholesale prices rose 1.0 to 159.2 (base 1926=100) between September and October, 1948. Six of the eight major groups were firmer. Wood, wood products and paper rose 4.5 points to 193.8 reflecting sharp increases in fir and cedar lumber and cedar shingles. In the non-ferrous metals group strength in silver and zinc was responsible for a gain of 4.1 points to 159.9. Higher prices for cotton yarn, burlap bags and carpets advanced fibres, textiles and textile products 0.9 to 160.7, while vegetable products rose 0.5 to 139.0 when higher quotations for oats, barley, rye, oranges, lemons and hay outweighed lower prices for millfeeds and cornmeal. A gain of 0.3 to 165.3 in the iron and steel group reflected strength in hardware items, while higher sulphur prices

moved the non-metallic minerals group up 0.2 to 137.3. Two groups worked lower. The animal products series declined 0.9 to 177.5 when recessions in livestock and fresh meats outweighed seasonal strength in eggs, and a drop of 0.6 to 126.2 in the chemical group reflected lower prices for soap and tartaric acid. Shellac and direct black prices were firmer.

An index for Canadian farm products prices at wholesale weakened 0.5 to 142.9 between September and October due mainly to lower animal product prices. The index for animal products dropped 1.7 points to 186.7 as decreases occurred for livestock, hides and skins and raw wool. These outweighed an upturn in eggs. Over the same period field product prices rose 0.3 to 116.8, reflecting increases for rye, oats, barley, potatoes, onions and hay.

STRIKES AND LOCKOUTS*

Canada, November, 1948

The time loss due to strike activity in Canada during November, 1948, was the lowest recorded for any month since February, 1946. There was a slight decline in the number of strikes and lockouts in existence during the current month, as compared with the previous month and with November, 1947, but in both comparisons sharp decreases were recorded in the number of workers involved and in the resulting time loss. For the first eleven months of this year the figures are substantially below those for the same period last year, the number of strikes being about three-fifths of last year's total, while the number of workers involved and the time loss are both about one-third of last year's totals.

Preliminary figures for November, 1948, show 20 strikes and lockouts in existence, involving 3,307 workers, with a time loss of 16,000 man-working days, as compared with 23 strikes in October, 1948, with 7,310 workers involved and a time loss of 87,223 days. In November, 1947, there were 29 strikes, involving 14,775 workers, with a time loss of 119,701 days.

For the first eleven months of this year, preliminary figures show 144 strikes and lockouts, involving 39,439 workers, with a time loss of 879,466 days. For the similar period last year there were 228 strikes,

involving 102,670 workers, with a time loss of 2,375,081 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in November, 1948, was .02 per cent of the estimated working time, as compared with .11 per cent in October, 1948; .15 per cent in November, 1947; .10 per cent for the first eleven months of 1948; and .28 per cent for the first eleven months of 1947.

Of the 20 strikes recorded for November, 1948, two were settled in favour of the workers, six in favour of the employers, two were compromise settlements and three were indefinite in result, work being resumed pending final settlement. At the end of the month seven strikes were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., on May 30, 1946; soft drink factory workers at Edmonton, Alta., December 1, 1947; print-

ing pressmen at Toronto, Ont., December 15, 1947; costume jewellery factory workers at Toronto, Ont., April 29, 1948; coal

miners, Edmonton District, Alta., January 13, 1948; and seamen, Great Lakes and St. Lawrence River, June 6, 1948.

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review, issued as a supplement to the *LABOUR GAZETTE* for April, 1948, and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in September, 1948, was 103 and 13 were still in progress from the previous month, making a total of 116 during the month. In all stoppages of work in progress in the period there were 14,500 workers involved and a time loss of 42,000 working days was caused.

Of the 103 stoppages which began during September, six arose out of demands for advances in wages; 29 over other wage questions; three on questions as to working

hours; 21 on questions respecting the employment of particular classes or persons; 42 on other questions respecting working arrangements; and two were on questions of trade union principle.

United States

Preliminary figures for October, 1948, show 240 strikes and lockouts beginning in the month, in which 110,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 2,000,000 man-days. Corresponding figures for September, 1948, are 250 strikes and lockouts, involving 160,000 workers, with a time loss of 2,400,000 days.

New Zealand

Figures for the 1st quarter of 1948 show 25 strikes involving, directly and indirectly, 8,749 workers and causing a time loss of 11,913 man-days. For the 2nd quarter of the year these figures are 22 strikes with 4,363 workers directly and indirectly involved and a time loss of 25,008 man-days.

FATAL INDUSTRIAL ACCIDENTS IN CANADA

Third Quarter of 1948

There were 376 industrial fatalities in the third quarter of 1948 according to the latest reports received by the Department of Labour. In the previous three months there were 322 including 32 in a supplementary list. The accidents recorded are those which involved persons gainfully employed, during the course of or arising out of their employment and include deaths which resulted from industrial diseases as reported by the provincial Workmen's Compensation Boards.

During the quarter under review there were five industrial accidents which resulted in the death of three or more persons in each case. On July 22 five riggers were drowned in the Ottawa River, Ontario, when a section of a bridge fell into the river. Three seamen shipping out from Quebec were drowned in France on July 24 when their boat was swamped.* On July 30 five

men were drowned at Cap aux Oies, Quebec, when their lifeboat sank. The capsizings of boats were responsible for the drowning of four fire fighters on August 8 in the Wanapitei River, Ontario, and the drowning of five woodsmen in Gibson's Lake, New Brunswick, on September 16.

Statistics on industrial fatalities are compiled from reports received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Newspaper reports are also used to supplement these data.

Grouped by industries the largest number of fatalities, 73, was recorded in manufacturing of which 21 occurred in saw and planing mills, and 20 in iron, steel and

* Accidents to seamen occurring outside of Canada are listed under the province from which craft were operated.

products. During the previous quarter 60 fatalities occurred in manufacturing including 19 in the iron and steel products group and 15 in saw and planing mills.

There were 69 fatalities recorded in transportation and public utilities as compared with 50 in the previous quarter. Fatalities in water transportation numbered 30 while there were 18 in steam railways. In the previous quarter there were 29 in steam railways and 7 in water transportation.

Of the 37 fatalities in the mining group, 23 were in metalliferous mining. In the previous quarter there were 47 in the mining group of which 31 were in metalliferous mining.

The number of fatalities in logging decreased from 50 to 31. Fatalities in the construction industry increased from 46 in the second quarter to 62 in the third quarter of 1948. Increases in the number

of recorded fatalities occurred also in agriculture from 20 to 41 and in service from 29 to 30.

The most important cause of fatalities was moving trains, water-craft and other vehicles which caused 126 industrial fatalities during the quarter as compared with 79 in the previous quarter.

Falling objects caused 43 deaths, and falls of persons 70. Industrial diseases, infection and other causes resulted in 38 deaths while dangerous substances caused 42 deaths.

The largest number of industrial fatalities was in Ontario where there were 122. In Quebec there were 89 and in British Columbia 68.

During the quarter under review there were 127 fatalities in July, 137 in August and 112 in September.

* See Tables H-1 and H-2.

SELECTED PUBLICATIONS RECEIVED IN LIBRARY OF THE DEPARTMENT OF LABOUR, OTTAWA

The Publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the Publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

¹ Industries classed in the durable manufactured industries.² Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c. the latest figures are as follows: Aug. 1, 1948, 202-1; Sept. 1, 1948, 215-6; Oct. 1, 1948, 217-5; at Oct. 1, 1947 the index was 180-3.³ Chiefly street and electric railways. For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

TABLE C-10.—EARNINGS, HOURS, AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with prices averages for earlier years. Changes in grading, trade practices, etc., occur from time to time.

(a) Rent figures are obtained by multiplying increases since June, 1941 by the average rental determined by the census of that date. The increases are based upon reports from real estate agents and *periodic sample surveys* which are now being conducted by direct interview.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(c) Averages include prices for cuts with bone in.

| Cumulative totals..... | 228 | | 102,670 | | 2,375,081 | .28 |

* Preliminary figures.

‡ Strikes untermated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA DURING
NOVEMBER, 1948⁽¹⁾**

(Source: Research and Statistics Branch, Department of Labour)

| Industry, Occupation and Locality | Number Involved | | Time Loss in Man- Working Days | Particulars ⁽²⁾ |
|---|---------------------|---------------------|---|--|
| | Establish- ments | Workers | | |
| Strikes and Lockouts in Progress Prior to November, 1948 | | | | |
| MANUFACTURING— <i>Fur and Leather Products—</i> Tannery workers, Owen Sound, Ont. | 1 | 44 | 1,000 | Commenced October 27; for implemen- tation of award of conciliation board for a new agreement providing for increased wages, two weeks' vaca- tions with pay, etc; unternminated. |
| <i>Textiles, Clothing, etc.—</i> Textile factory workers, St. Johns, P.Q. | 3 | 100 | 2,000 | Commenced July 12; alleged discrimi- nation in dismissal of workers; untermi- nated. |
| Woollen factory workers, Sherbrooke, P.Q. | 1 | 454 | 800 | Commenced August 16; protesting intro- duction of new bonus system; termi- nated November 2; conciliation, pro- vincial; compromise. |
| Miscellaneous Wood Products— Furniture factory workers, Arthabaska and Victoriaville, P.Q. | 2 | 295 | 1,000 | Commenced July 9; for a new agreement providing for increased wages, two weeks' vacations with pay, etc., following refusal of union to accept award of arbitration board; termi- nated November 4; conciliation, pro- vincial, and negotiations; in favour of workers. |
| CONSTRUCTION— <i>Buildings and Structures—</i> Bricklayers, Calgary, Alta. | 9 | 45 | 450 | Commenced October 28; for payment of wages by cash instead of cheques; terminated November 12; negoti- ations; in favour of employers. |
| Electricians, helpers and apprentices, Victoria, B.C. | 14 | 90 | 1,000 | Commenced October 25; for a greater increase in wages than recommended by conciliation board; unternminated. |
| SERVICE— <i>Business and Personal—</i> Burglar and fire alarm protection workers, Hamilton and Toronto, Ont. | 2 | 93 | 90 | Commenced September 15; for a greater increase in wages than recommended by conciliation board, reduced hours, closed shop, etc., in new agreement under negotiations; terminated Novem- ber 1; return of workers; in favour of employers. |
| Strikes and Lockouts Commencing During November, 1948 | | | | |
| LOGGING— Loggers, Hope, B.C. | 1 | 20 | 100 | Commenced November 4; for payment of back pay alleged to be owing; termi- nated November 11; replacement; in favour of employer. |
| Loggers, Campbell River, B.C. | 1 | 100 | 1,400 | Commenced November 15; protest against discharge of a set (3) of fallers for inefficiency; unternminated. |
| MINING— Coal miners, Stellarton, N.S. | 1 | 574 | 700 | Commenced November 1; against dis- missal of a miner for using violence against official during argument; termi- nated November 2; reference to umpire; in favour of workers. |
| Strip coal miners, Bienfait-Estevan Field, Sask. | 9 | (³)200 | 4,000 | Commenced November 3; for a new agreement providing for increased wages, retention of 40-hour week, welfare fund, etc., following reference to conciliation board; unternminated. |

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DURING
NOVEMBER, 1948⁽¹⁾—*Conc.***

(Source: Research and Statistics Branch, Department of Labour)

| Industry, Occupation and Locality | Number Involved | | Time Loss in Man- Working Days | Particulars ⁽²⁾ |
|---|---------------------|---------|---|--|
| | Establish- ments | Workers | | |
| Strikes and Lockouts Commencing During November, 1948— <i>Conc.</i> | | | | |
| MINING— <i>Conc.</i> Coal miners, loaders, New Waterford, N.S. | 1 | (4)22 | 20 | Commenced November 10; protesting suspension of loaders for refusal to stay on wall pending repairs to equipment; terminated November 11; return of workers; in favour of employer. |
| MANUFACTURING— <i>Animal Foods</i> — Fish packers, Halifax, N.S. | 1 | (5)200 | 250 | Commenced November 4; against proposed night shift and dismissal of two union officers; terminated November 5; conciliation, provincial, and return of workers pending reference to arbitration committee; indefinite. |
| <i>Metal Products</i> — Metal factory workers, Kitchener, Ont. | 1 | (6)160 | 750 | Commenced November 11; for implementation of majority report of conciliation board for increased wages, pay for two additional statutory holidays, and extension of vacation plan; terminated November 17; negotiations; compromise. |
| Tool, machine and foundry workers, Hamilton, Ont. | 2 | 180 | 250 | Commenced November 15; dispute over hours and days of work during power shortage; terminated November 16; negotiations; in favour of employer. |
| TRANSPORTATION— <i>Water</i> — Seamen, Halifax, N.S. Montreal, P.Q. | 4 | 200 | 50 | Commenced November 5 and sporadic strikes at later dates; protesting sale of Canadian registry ships to foreign interests and alleged hiring of foreign seamen to replace Canadian seamen; terminated by November 23; return of workers; in favour of employers. |
| TRADE— Gas and oil warehouse workers, drivers and helpers, Saint John, N.B. | 1 | 42 | 900 | Commenced November 5; for a union agreement providing for increased wages, reduced hours from 54 to 48 per week, extension of vacation plan and payment for eight statutory holidays; unternminated. |
| Wholesale grocery ware- house workers, Windsor, Ont. | 1 | (7)19 | 65 | Commenced November 24; for union recognition; terminated November 27; negotiations and return of workers pending certification of union as bargaining agency; indefinite. |
| FINANCE— Government insurance workers, Saskatchewan | 7 | 110 | 1,150 | Commenced November 17; for increased wages; unternminated. |
| SERVICE— <i>Business and Personal</i> — Hotel employees, Montreal, P.Q. | 1 | 359 | 25 | Commenced November 5; for a new agreement providing for increased wages; terminated November 5; return of workers pending further negotiations; indefinite. |

(1) Preliminary data based where possible on direct reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(3) 150 indirectly affected; (4) 769 indirectly affected; (5) 50 indirectly affected; (6) 213 indirectly affected; (7) 42 indirectly affected.

Volume XLIX

Number 2

February, 1949

The Labour Month in Brief

The month of December, 1948, brought to a close a year of very favourable employment conditions. In the last quarter of the year, higher wages were made more effective by a check in the rise of the cost-of-living index. Industrial disputes were few in number as the year ended.

Employment

Exceptional employment records were attained during 1948. At the close of the year, however, seasonal influences had as usual brought about a surplus of unskilled workers.

Agriculture, construction, and transportation had released many of their workers for the winter months. On the other hand, logging, which formerly had provided jobs for many of these workers, was operating at a much lower level and employment accordingly had declined. British Columbia, Quebec and the Prairies were particularly affected by this situation.

The number of unplaced applicants registering at local offices of the National Employment Service was higher than at the corresponding periods of the previous year. In part this reflected an increase in the size of the labour force. It appeared also

that greater use was being made of Employment Offices, owing to broader unemployment insurance coverage.

At the end of December, unplaced applicants numbered 186,659, as compared with 142,412 a year previously. Claimants for unemployment insurance numbered 144,058, as compared with 94,525 on December 31, 1947.

By the end of January, 1949, the number of unplaced applicants had risen to 248,517, as compared with 186,056 a year previously.

While unemployment thus appeared to be somewhat higher, available statistics indicated that the number of persons gainfully employed also exceeded the previous year's totals. The Dominion Bureau of Statistics index of non-agricultural employment reached a record height at December 1. The Bureau's sample survey of the labour force also showed higher employment. Covering the week ending November 20, the survey indicated that employment outside of agriculture at 3,872,000 was 93,000 higher than in November, 1947; agricultural employment was down, however. The estimate of total employment, 4,858,000, was below the record of 5,042,000 set in September, 1948.

WORKING DAYS LOST THROUGH STRIKES AND LOCKOUTS

By month, 1947 and 1948

Thousands

Industrial Relations

Time loss through work stoppages arising from industrial disputes in Canada during 1948 was only a little more than one-third of the total time loss in 1947, according to preliminary figures which showed 148 strikes and lockouts in 1948 involving 41,234 workers, with a time loss of 898,405 man-working days—a drop in time loss of 1,498,935 man-working days from the 1947 figure. There were 236 strikes in 1947, involving 104,120 workers and a time loss of 2,397,340 days.

The demand for increased wages was the principal issue in 85 per cent of all work stoppages in 1948. Three major strikes during the year—coal miners in Alberta and British Columbia, furniture factory workers in the province of Quebec, and automobile parts factory workers at St. Catharines, Ontario—accounted for about 60 per cent of the total 1948 time loss.

Time loss during December, 1948, amounted to 18,939 man-working days.

In the field of labour relations within the jurisdiction of the federal Department of Labour, the month of December was without unusual incident. Industrial peace existed in almost all branches of industry, and, with the possible exception of ocean-going shipping, promised to continue well into the year 1949.

Earnings

A notable feature of the economy in the closing months of 1948 was the rise that took place in the statistics of "real" weekly earnings.

As indicated in the accompanying charts, average hourly earnings in manufacturing rose steadily through the year. However, a different trend was followed in weekly income. During the summer months the length of the working week fell, on the average, so that weekly earnings fluctuated somewhat. Meanwhile the cost-of-living index was advancing steadily, and this brought about a decline in the index of real weekly earnings.

In the last quarter of the year, however, the cost-of-living index remained stable, while hourly earnings, average hours worked per week, and average weekly earnings all increased. These factors resulted in an improvement in real earnings, and in fact by December 1 the index of real earnings in manufacturing (av. 1946=100) had reached 106.6, the highest point since V-E Day.

Cost of Living

Canada's official cost-of-living index, which at December 1 had shown its first decline of any consequence in over three years,

rose again at the beginning of January. The rise, from 158.9 to 159.6, exactly offset the decline during the previous month.

While all budget indexes were firm, more than half of the rise was due to changes in service rates, including health, personal care, laundry and fuel gas, which are priced only at annual intervals because of their characteristic stability.

The food index rose from 202.0 at the beginning of December to 202.2, with further declines in egg and fruit prices acting as a partial offset to generally firmer levels for other foods. Fuel and light moved up from 129.1 to 130.0.

The clothing index rose from 181.5 to 181.9, and home furnishings and services from 166.2 to 167.0, on scattered increases which affected nearly all sub-groups. The advance in miscellaneous items from 124.6 to 126.6, reflected changes in health and personal care services. The rentals index remained unchanged at 121.7.

Labour Income

During September a lump-sum payment of \$31 million in retroactive wages to employees of Canadian railway systems caused an unusually large rise in the statistics of labour income. For October the figure was \$27 million lower; but discounting the lump-sum payment, wages, salaries and supplementary income showed a gain of \$4 million. The 10-month total for 1948 is estimated at \$5,879 million, about 15 per cent higher than the corresponding total of \$5,117 million in 1947.

An adjustment in the statistics of labour income has been made to bring the totals into agreement with the revised annual totals published in "National Accounts, Income and Expenditure, 1926-1947."

Foreign Trade

Canada's unfavourable trade balance with the United States in 1948—already substantially cut from 1947—was whittled slightly lower in November when domestic and foreign exports to that country exceeded Canadian purchases by approximately \$1,500,000 to reduce the debit figure from \$275,400,000 at the end of October to \$273,700,000. This compares with an adverse balance of \$884,200,000 at the end of November, 1947.

In trade with the United Kingdom, Canada had a favourable balance of \$28,600,000 in November as compared with \$36,500,000 in October and \$51,600,000 in November, 1947. For the 11 months ending November, the credit balance aggregated \$365,200,000, down from \$511,800,000 for the similar period of the previous year.

NOTES OF CURRENT INTEREST

Honourable Humphrey Mitchell sets record of service

On January 13 the Honourable Humphrey Mitchell achieved the distinction of serving longer as a Minister of Labour than any other holder of that office within the British Commonwealth.

The previous day he had equalled the record length of service of the Hon. T. W. Crothers, K.C., who from 1911 to 1918 served seven years and twenty-eight days as head of the Labour portfolio in the administration of Sir Robert Borden.

Efforts to check "export of brains"

During recent years increasing concern has been evident in Canada with respect to the considerable numbers of technically trained Canadians who

accept permanent employment in the United States. It is widely recognized that Canada can ill afford this so-called "export of brains" and that efforts should be made to counteract it.

One such step is being taken by the Executive and Professional Division of the National Employment Service of the Unemployment Insurance Commission. The Division, during the two years since it was set up, has given particular study to this problem. It has been learned that in many instances, Canadian students at American universities would prefer to return to Canada, if employment were found that would provide outlets for the exercise of their special qualifications.

The Executive and Professional Division obtained from the Department of Veterans Affairs the names and addresses of more than 900 Canadian veterans who were studying at universities all across the United States. Letters and information relating to the National Employment Service were forwarded to each of these. The response is reported to be "very gratifying." Hundreds of appreciative replies have been received. Many of the students called meetings of other Canadian students, or by other means, spread the information and large numbers of non-veteran students have written for information with respect to prospective employment and business openings in Canada. More than 1,300 have communicated with the Division so far and have been given detailed information as to the extent and nature of the service provided by the National Employment Service.

Thus the project, although only in its initial stages, has demonstrated the desire of many Canadian students to return to Canada following their graduation, and every effort will be made to place them in employment where their talents and specialized skills will be retained for Canada.

Transfer of carpenters by National Employment Service

The method by which the National Employment Service uses its network of offices to provide workers for an urgent project has been demonstrated at Petawawa Military Camp on the Ottawa River. This job, sponsored by the Federal Government, involves the construction of a large number of pre-cut homes at the camp.

On November 8, the contractor needed approximately 150 general carpenters who possessed their own tools. The contractor notified the Pembroke office of the Employment Service, which arranged for the Regional Office in Toronto to clear the order all over the province and into Quebec. By early December, 142 carpenters had been found for this job, of whom 103 came from Quebec and 39 from Ontario.

The wide range of Employment Service operations is shown by the record of transfers of these carpenters. Cornwall transferred 16 qualified tradesmen, Ottawa 17, Montreal 11, Rimouski 22, Shawinigan Falls 29, Rivière du Loup five and Quebec City three. In the Lake St. John area two were recruited at Jonquière, two at St. Joseph d'Alma and one at Chicoutimi. The mining areas participated by transferring four carpenters from Val d'Or, one from Kirkland Lake, one from Sudbury, one from North Bay and one from Thetford Mines. Other offices at Sorel, Rouyn, Kapuskasing and Hawkesbury also located one or two carpenters to complete the order.

Growth of unemploy- ment insurance fund

The unemployment insurance fund for the first time rose above the half-billion dollar mark during November, and at the end of the month stood at \$509,155,346.69.

During the month, benefit payments to unemployed persons were \$2,279,934.18; while revenue totalled \$11,587,108.31, comprising \$8,759,604.20 in employer and employee contributions, \$1,754,063.83 in

Government contributions, \$1,072,919.23 in interest on investments, etc., and \$521 in fines.

A more detailed statement concerning receipts and disbursements in regard to the fund appears in the *Labour Statistics* section of this issue, under Table E-7.

Dominion-Provincial farm labour conference

The federal and provincial governments and certain of the northern United States are continuing the co-operative policy in the direction and placement of farm labour developed during the war.

Early in December, the sixth Dominion-Provincial Farm Labour Conference was held in Ottawa. Official representatives of the Dominion and Provincial Departments of Labour and Agriculture were present, as well as observers from the National Employment Service and from the United States and Newfoundland. Mr. W. W. Dawson, Director, Agriculture, Forestry and Fisheries Division of the Federal Department of Labour, presided.

During the two-day conference reports were presented by provincial officials covering the transfer and placement of farm labour in 1948, and estimates were made of the prospective requirements throughout the spring, summer and autumn of 1949. A more extended report of the conference will be published in the March issue of the *LABOUR GAZETTE*.

Employer and labour groups submit briefs on prices

Recommendations made by labour organizations, in briefs submitted to the Royal Commission on Prices in December, included the reimposition of price controls and the excess profits tax, the re-introduction of subsidies, reduction of sales and excise taxes, and increased exemption for personal income tax. It was also proposed that some form of price control board or price arbitration court be set up, to which applications for price increases would have to be submitted and approved before they could be put into effect. Briefs were submitted by the Trades and Labour Congress of Canada, the Canadian Congress of Labour, and the Canadian and Catholic Confederation of Labour.

The Canadian Chamber of Commerce opposed "interference with the function of prices," stating that there was "no general cure-all" for high prices, and that "any rapid downward movement" could lead to a depression.

The Canadian Manufacturers' Association argued that further wage increases would lead to higher prices, declared that the current profits of Canadian corporations were "reasonable," and called for increased physical output on the part of labour.

Briefs were also presented by the Canadian Retail Federation, Co-operative Union of Canada, Canadian Association of Consumers, and other national organizations.

The Royal Commission on Prices was appointed to continue the work begun by the Special Prices Committee of the House of Commons (L.G., Aug., 1948, pp. 831-33). Public hearings were concluded on December 16, and the Commission's report was expected to be ready for presentation to Parliament in January. A summary of the report will be given in a future issue of the *LABOUR GAZETTE*.

Work of Industrial Development Bank

The Industrial Development Bank was established in 1944 by Act of Parliament. Its purpose is to provide financial assistance mainly to small and medium-sized enterprises which are demonstrably sound but which might not otherwise be able to get credit on reasonable terms and conditions. The Bank is intended to supplement rather than compete with the activities of the chartered banks and other lending organizations.

The Industrial Development Bank operates as a subsidiary of the Bank of Canada.

During the fiscal year ending September 30, 1948, the Bank authorized 143 applications for loans, as compared with 177 the previous year, according to the Annual Report of President G. F. Towers to the Minister of Finance. More applications were refused than in 1947, since, in the words of the Report, "the combination of high cost of capital development and the state of the market for various types of consumers' goods, in which supply is tending to outstrip demand has made it desirable for the Bank—both in its own interest and in that of its customers—to scrutinize applications for credit with ever-increasing care."

Since it commenced operations on November 1, 1944, the Bank has authorized 586 loans, investments and guarantees in a total amount of \$39,027,624. The loans cover a wide range of industries, while on a geographical basis they follow fairly well the pattern of industrial development in Canada. The Report states that "during

the past year, both the Maritimes and British Columbia received an increased percentage of the Bank's total loans authorized."

Noting that many of the loans have been to industries "quite new to the industrial economy of Canada," Mr. Towers concludes the Report by stating: "I think it may be said that the Bank has been playing its part in the large task involved in the re-equipment and expansion of Canadian industry."

Collective agreements in Quebec

Statistics furnished by the Department of Labour of the Province of Quebec, and published in the *Bulletin des Relations Industrielles* of Laval University indicate that in the course of the fiscal year ending March 31, 1948, a total of 676 collective agreements covering 158,317 wage-earners, were deposited with the Labour Relations Board in conformity with the Labour Relations Act.

The *Bulletin* prints the following statistics relating to the various labour organizations in the Province:—

(1) *Canadian and Catholic Confederation of Labour*; 262 agreements covering 59,598 workers. Of the 262 agreements, 209 were concluded directly by the parties concerned, 53 following the intervention of a conciliator, and 16 after an arbitration judgment was rendered.

(2) *Trades and Labour Congress*; 190 agreements covering 44,416 workers. Of the 190 agreements, 143 were concluded directly by the parties concerned, 45 following the intervention of a conciliator, and 30 after an arbitration judgment was rendered.

(3) *Canadian Congress of Labour*; 93 agreements covering 20,554 workers. Of the 93 agreements, 64 were concluded directly with the parties concerned, 28 following the intervention of a conciliator, and 20 after an arbitration judgment was rendered.

(4) *Independent Unions*.

(a) *Incorporated*; 75 agreements covering 25,550 workers. Of the 75 agreements, 63 were concluded directly by the parties concerned, 11 following the intervention of a conciliator, and 7 after an arbitration judgment was rendered.

(b) *Non-incorporated*; 57 agreements covering 8,199 workers. Of the 57 agreements, 45 were concluded directly by the parties concerned, 12 following the intervention of a conciliator, and 6 after an arbitration judgment.

The *Bulletin* concludes: "If to the agreements deposited, after deducting those in default or terminated, we add the agreements previously deposited and remaining in force at March 31, we arrive at a grand total of 1,136 agreements covering 163,548 wage-earners. The provisional statistics for the month of November indicate that the collective agreements deposited now exceed 1,500 and cover more than 200,000 workers."

Diamond Jubilee of Hamilton Labour Council

The Hamilton and District Trades and Labour Council celebrated its Diamond Jubilee on December 4, 1948. Hon. Humphrey Mitchell, Minister of Labour, and Mr. Percy Bengough, President of the Trades and Labour Congress of Canada, were guests of honour.

Prominent leaders in organized labour and in Canadian public life who attended the celebration included Hon. Charles Daley, Minister of Labour for Ontario; Hon. Colin Gibson, Secretary of State; Hon. Russell T. Kelley, Provincial Minister of Health; J. W. Buckley, Secretary-Treasurer, Trades and Labour Congress of Canada; E. F. MacArthur and William Jenoves, President and Vice-President respectively of the Provincial Federation of the Trades and Labour Congress; and Samuel Lawrence, Mayor of Hamilton. The President of the Hamilton and District Council, TLC, A. B. Docherty, presided at the dinner in the Royal Connaught hotel.

Hon. Humphrey Mitchell, for many years a member and a prominent officer in the Hamilton Council, touched upon some of the highlights in the eventful history of the Council and extended his congratulations on the progress it had made, as well as the spirit of unity that it had developed in its membership. He compared conditions in Europe as he had found them during his recent tour of inspection there, with those in Canada and declared that "there is no country under the canopy of heaven where there is greater freedom than there is in this great country."

Mr. Bengough declared that "the Trades and Labour movement is owned by nobody, nor is it controlled by any one person, nor do I think it will ever fall into the hands of the Communist party." He was of the opinion that Canadians in general had confidence in the TLC and asserted that "no group of any description, either the impossible 'leftists,' or the ultra-conservative 'rights' are going to govern the Trades and Labour Congress."

Mr. Bengough recalled that the Hamilton Council was one of the first six to be chartered in Canada. It had "contributed a great deal to the working people of this country," he said, declaring that much of today's labour legislation originated with the Hamilton Council.

Sudden death of Hugh A. Black, Director of the Annuities

Death came suddenly on December 19 to Hugh A. Black, Director of the Annuities Branch of the Dominion Department of Labour.

Coming to Ottawa from Edmonton in 1942, Mr. Black became associated with the Cost Accounting Division of the Federal Treasury. A year later he was appointed assistant to the Deputy Minister of Labour, Dr. A. MacNamara. While in this position he gave valued service on several Government Committees, including the Public Records Committee, the Appeal Board that dealt with Labour Exit Permits, the Rehabilitation Information Committee and the Civil Service Mobilization Committee. Subsequently, he was made Administrative Officer of the Department of Labour and in 1946, succeeded E. G. Blackadar as Director of the Annuities Branch.

In paying tribute to the services of Mr. Black, the Hon. Humphrey Mitchell, Minister of Labour said: "He was one of our most able and conscientious officials and a devoted public servant who never spared himself in dealing with the day-to-day problems of his responsible position. We all respected and liked him and shall miss him very much. It is going to be difficult to fill his place."

Mr. Black was born in Carman, Manitoba. He served with the Canadian Forces in France in the First World War and was wounded during the battle on the Somme. Upon his recovery, he joined the Royal Air Force, with which he served for the remainder of the war. Following his graduation from the University of Manitoba, he became a chartered accountant and was a member of the Edmonton accounting firm of Mackintosh and Black prior to coming to Ottawa.

Vacations with pay in Britain

More workers in Britain are taking vacations with pay today than ever before, the British Information Services state in their

review, *Labour and Industry in Britain*, of December, 1948.

It is estimated that about 12 million wage-earners are now covered by collective agreements or orders providing for holidays with pay, apart from the large number of other workers, such as clerks and salaried workers generally, to whom holidays are granted by other arrangements.

In the summer of 1948 there were in operation just under 2,000 collective agreements providing for paid vacations for wage-earners. These agreements operate in practically all industries in which conditions of employment are determined by collective bargaining.

Under the Conditions of Employment and National Arbitration Order, 1940, conditions recognized by organizations representing substantial proportions of the employers and workers in any industry and district, had to be observed by employers generally in that industry and district, and therefore most of the agreements are now more widely effective than before the war. The Holidays with Pay Act, 1938, empowers statutory wage authorities to order holidays for workers for whom they prescribe minimum wages. Holidays are also prescribed under the Wages Councils Act, and other legislation.

The majority of the collective agreements provide for 12 days' holiday with pay, consisting of six consecutive days and six public or statutory holidays. In a considerable number of others, the period is 6 or 18 days. Where the period is 6 days, payment is usually for a week's annual holiday, with no payment for public holidays, except for a special rate of payment to workers called upon to work on such days. A period of 18 days usually includes two weeks' annual vacation and 6 public holidays.

Nearly all agreements specify certain conditions which must be fulfilled before the worker becomes entitled to the benefit of paid holidays. The consecutive days' holiday is usually dependent upon the worker having had a specified length of service up to the time of the holiday or other specified date. Many, however, provide for workers whose employment has not been continuous with the same employer for the full period. This is the case in industries such as building, engineering, and cotton, in which the holiday pay accrues from week to week under a system of accumulated credits, and there is machinery for the carrying forward of such credits when a worker changes his employer. Payment of wages for public holidays is not as a rule dependent upon length of service. Conditions as to attend-

ance occur more frequently, payment often depending upon the worker attending on the days immediately preceding and following the holiday.

In many of the agreements provision is made for the payment of holiday allowances to workers who leave their employment or are discharged before they have taken their holiday. Payment is usually proportionate to the time served since the date of the previous annual holiday or some other specified date.

Welfare plan at U.S. automobile firm

A social security plan, negotiated by the United Automobile Workers with the Kaiser-Frazer Corporation, Detroit, is stated to be the first of its kind in the automobile industry.

The plan now covers a total of 44,357 employees and their dependents, and is entirely financed by the company, which pays 5 cents per hour for each hour worked by the employees covered. Two funds have been set up, one covering union members and the other, non-union employees. The former, the KF-UAW Social Security Fund, is jointly administered; the latter is administered solely by the company.

The benefits provided are free hospitalization, \$2,000 of life insurance for each worker, and payments of \$15 a week for a maximum of thirteen weeks for sickness and accidents.

Recent health benefits in Australia

The Australian Pharmaceutical Benefits Act, 1947, which came into operation on June 1, 1948, provides for pharmaceutical benefits to every person ordinarily

resident in the Commonwealth of Australia. Pharmaceutical benefits are supplied on presentation of a written and signed prescription, on the prescribed form, by a medical practitioner, an approved pharmaceutical chemist or approved hospital authority. The Act is administered by the Director-General of Health, who is required to prepare an annual report concerning the administration and operation of the Act and to submit it to the Minister for presentation to Parliament.

Under the auspices of the Ministry of Health and Social Services, a "flying dentist" service has been introduced. This is a further step in the Government's program for providing medical care to

inhabitants of remote areas. The dentist will have a plane at his disposal, supplied by the Government, which will carry about 190 pounds of equipment.

Indian State Insurance Act, 1948

The Employees' State Insurance Act, 1948, adopted by the Indian Dominion Legislature, provides benefits in respect of sickness, maternity and employment injury to persons employed for wages in, or in connection with, the work of a factory other than seasonal. The Act does not apply to any member of the armed forces or to a person whose remuneration exceeds 400 rupees a month. About 2½ million workers are covered initially; the scope of the Act may be extended later.

Trade union organization in Dominion of India

Twenty years ago (1927-28) there were 29 registered trade unions in British India, with a total membership of about 100,600, of whom only 3,594, or 1·2 per cent were women.

At the end of March, 1947, according to a recent issue of the *Indian Labour Gazette*, there were 1,725 trade unions on the registers in the provinces of the Dominion of India, not including East Punjab. As registration is not compulsory, there are, in addition "a number of unregistered unions."

Membership in registered unions during the same year (1946-47) stood at 1,331,962 of whom, 64,798, or 4·9 per cent were women. The most marked increases in the number of unions and in total membership have been made since the war, although growth has been steady and fairly uniform, between 1928 and 1945. Thus in 1944-45 there were 865 registered unions, having a total membership of 889,388, so that the increases in the two-year period were 860 in the number of registered unions and 442,574 in total membership.

Union federation has made a similar advance in the year ending March 31, 1947. Seven federations were registered during the year as compared with four in the previous year.

It is stated that reports from some of the provinces attribute this recent rapid growth to "a growing desire on the part of workers to organize themselves in order to demand higher wages to compensate them for the rising cost of living." The enforcement of the Industrial Standards (Standing Orders) Act is said to have given "a further impetus to the registration of new unions."

APPRENTICESHIP IN CANADA

To meet industry's needs for highly skilled workers, Dominion and provincial authorities are encouraging apprenticeship. The Dominion has ten-year agreements with most provinces under which it renders financial support to provincially-administered programs that meet prescribed standards. Recently authority was granted to amend these agreements with a view to making apprenticeship more attractive to young persons.

Prior to 1928, apprenticeship in Canada was a neglected field in so far as Governmental interest and support was concerned. Up to that time only scattered plans had been developed by private industry, notably by the Canadian Pacific and Canadian National Railways.

A booklet entitled *Apprenticeship in Canada* recently issued by the Training Branch of the Department of Labour, thus describes the status of apprenticeship 20 years ago. However, a growing recognition of its importance, not only to industry, but to all Canadians has been in evidence, particularly since shortly before the outbreak of war in 1939.*

The booklet presents a review of the development of apprenticeship in the several provinces, together with synopses of apprenticeship systems followed in the other countries of the British Commonwealth and in the United States. Included also are seven appendices which provide samples of indenture forms used and comprehensive information with respect to designated trades, wages and length of apprenticeship in the several provinces, as well as other aspects of the plans described in the booklet.

Basic Principles of Apprenticeship

The term "apprenticeship" has been very loosely used, the booklet points out, and frequently denotes nothing more than the practices followed in teaching an employee a job without regard to the degree of skill essential to the competent performance of such a job, or the adherence to any definite plan or method. This tendency has been accentuated in recent years by the higher degree of specialization in modern industry, coupled with the increasing use of automatic machinery and the breaking down among several semi-skilled workers of jobs formerly performed by skilled craftsmen.

"These tendencies," the booklet continues, "have led some to assert that there is no longer any need for apprenticeship. Nothing could be more mistaken. Industry still needs skilled workers, although it is true that the same high degree and wide range of skills is no longer essential in certain occupations, and equally true that the identical methods followed in training apprentices fifty, or even twenty years ago, are no longer necessary or desirable.

"At the same time, the development of modern industries has brought into being many new occupations calling for such a high degree of manipulative skill and technical knowledge that an organized system of apprenticeship should be the normal method of entry. It is essential that there should be a clear-cut distinction between 'apprenticeship' for these highly skilled trades and 'learnership' for entry to those semi-skilled or narrowly specialized occupations in which the requisite degree of competency can be attained in a much shorter time. It can, nevertheless, be asserted without much fear of contradiction that the period of apprenticeship for these skilled trades can be very much shortened from the five to seven years formerly prevalent, without any lessening of craft skill, provided that there is a systematic plan of practical and technical training under competent supervision and instruction, and in which training is not unduly sacrificed to the interests of production.

"At present there are some anomalies in the government apprentice plans in Canada where the apprentice period for the same occupation is a year to a year and a half longer in some provinces than in others. There is no logical or justifiable basis for such a situation."

Apprenticeship is defined in the booklet as "an organized program of training for a specific skilled trade embodying the following features: (1) an agreement or indenture

in written form; (2) a definite period of apprenticeship; (3) a fixed scale of wages with progressive increases; (4) a schedule of work processes; (5) provision for technical class instruction; (6) provision for trade tests and examinations; (7) a ratio of apprentices to journeymen; (8) adequate supervision and records; (9) joint representation of employers and organized labour on all boards and committees."

As defined in the Dominion of Canada Apprenticeship Agreement, an apprentice is "a person at least 16 years of age who enters into a written agreement with an employer to learn a skilled trade requiring a minimum of 4,000 hours of reasonably continuous employment and which provides a program of practical experience and related technical instruction for such person."

Beginnings of Apprenticeship in Canada

Until some 20 years ago Canadian industry depended largely on immigration from Great Britain and other Western European countries, for its skilled craftsmen. It is asserted that "the majority of employers followed a hit and miss plan of training, optimistically hoping to obtain skilled workers which some other employer had trained." Such legislation as there was, was of a "medieval character and reminiscent of the Elizabethan poor laws. In Prince Edward Island any infant of twelve might be indentured as an apprentice until the age of 21, and was to be taught the three R's. Penalties were provided for any person who permitted an apprentice in his house to play dice, cards, and drink intoxicating liquor. In Nova Scotia and New Brunswick there was similar legislation, with the additional proviso: 'That the overseers of the poor might bind as an apprentice, the infant children of anyone who has become a public charge on the parish.' The master must instruct his apprentice to read, write and cypher. In New Brunswick, no person could sell to an apprentice on credit. Any complaints about apprentices were heard before a Justice of the Peace, and one month in jail was a penalty for any misbehaviour."

Credit is given in the booklet to the employers and trade unions of the construction industry in Ontario "for the first real Government legislation and assistance." As a result of an experimental plan of apprenticeship financed and operated jointly by the employees and the unions, Ontario, in 1928, passed the "first genuine Appren-

ticeship Act in Canada, applicable to the building trades only." Provision was made for levying an assessment against employers to help defray the cost of class training of apprentices for two months in each of the two years of apprenticeship. This assessment was discontinued during the depression of the early 1930's and the number of apprentices fell off rapidly, reaching a low of 319 in 1935. In 1936, motor vehicle repair, hairdressing and barbering were added to the list of designated trades.

In British Columbia the Apprenticeship Act was proclaimed in 1935 and followed the Ontario legislation closely. Some plans, started privately by industry, conform to the provincial apprenticeship regulations, use the provincial indenture form and register apprentices with the provincial apprenticeship authorities.

Nova Scotia enacted legislation, also similar to that of Ontario, in 1936. However, "it was very limited in its actual application until recent years."

In 1937, the National Employment Commission appointed by the Dominion Government, recommended the establishment of a Branch of the Federal Department of Labour, to promote apprenticeship in the provinces in accordance with the basic standards outlined by the Commission. Some assistance was granted to the Ontario Government under the Dominion-Provincial Youth Training Program, but it was in 1944 that Dominion-Provincial co-operation in this field commenced on a broad scale under the Vocational Training Co-ordination Act. This Act enabled the Governor in Council to authorize the Minister of Labour to enter into apprenticeship agreements with the provinces. As a result of such agreements, Apprenticeship Acts were passed in 1944 by the provinces of Alberta, Saskatchewan, Manitoba, New Brunswick and Prince Edward Island. However, the Act is non-operative in the last named province."

Provincial Administrative Machinery

In each of the provinces, except Ontario and Quebec (the Quebec Apprenticeship Act is "so radically different" from that of the other provinces that it is dealt with in a separate section of the booklet) the Act provides for the appointment of an Apprenticeship Board or Commission, usually of five to seven members with representation from the Departments of Education and Labour and equal representation by employers and labour. In Ontario, apprenticeship is under the general direction of the Industry and Labour Board of the Provincial Department of Labour.

In the provincial Acts of Nova Scotia, Saskatchewan and British Columbia the duties of the Board, or Commission, are not specifically outlined. Elsewhere they include the following: (1) to prescribe the form of indentures; approve and register indentures and cancellations; (2) issue certificates; (3) prescribe the composition and powers of advisory committees; (4) supervise the payment of fees; (5) prescribe the nature of class training and qualifications of apprentices; (6) arrange for trade tests and examinations; (7) prescribe the records that are required to be kept. In addition to these duties, which are common to the provinces enumerated, others having application to individual provinces are outlined in the booklet.

Trade advisory committees "have been found invaluable in all provinces and increasing use is being made of their services.

All provincial acts provide for the appointment of a Director of Apprenticeship, and such other staff as may be necessary. The duties of the Director include the following: (1) keep registration of apprentices; (2) enquire as to compliance with the Act; (3) promote apprenticeship in industry; (4) assist industry in establishing a permanent system of training apprentices; (5) provide information for the Minister, apprenticeship board and advisory committees; (6) collaborate with the educational authorities regarding technical training; (7) submit annual report to the Minister; (8) other duties concerning the Act as prescribed by the Minister.

Field Supervision

Field supervision of apprentices is "a most essential feature of any well organized program," enabling the provincial authorities to ensure that training standards are being complied with and that the apprentices are giving satisfactory service, and to adjust disputes or difficulties. Under an amendment to the Apprenticeship Agreement early in 1948 the Dominion may contribute financially to this work; and field supervisors have been appointed in all provinces except Nova Scotia.

Designated Trades

The number of "designated trades" varies from province to province. In practically all acts there is a section to the effect that no person can be an apprentice in a designated trade except in accordance with the regulations of the Act and, further, that no person eligible for apprenticeship can be employed in a designated trade for more than three months except under a contract of apprenticeship approved by the

Act. Provision does exist, however, in some of the provincial Acts, for exceptions to the above to be authorized by the Board or approved by a special permit. Such special cases are usually restricted to those employed in specialized or repetitive work.

Trades Designated under Provincial Apprenticeship Acts, and Apprentices Registered

JUNE 30, 1948

| | Trades Designated | Apprentices Registered |
|------------------|-------------------|------------------------|
| Nova Scotia | 19 | 284 |
| New Brunswick | 25 | 297 |
| Quebec | 25 | ... |
| Ontario | 14 | 6,780 |
| Manitoba | 19 | 731 |
| Saskatchewan | 17 | 417 |
| Alberta | 15 | 1,409 |
| British Columbia | 25 | 1,825 |
| Total | | 11,743 |

The Indenture

All provincial acts call for a written indenture on a form approved by the apprentice authorities, and also for the registration of each contract of apprenticeship.

In the indenture, the apprentice and/or his parent assume the following obligations in all provinces:—

1. He binds himself as an apprentice in the trade of — for a period of — to serve faithfully and obey all reasonable demands of the employer. In addition to the above, the following obligations are assumed in Manitoba, Saskatchewan and British Columbia.

- (i) To attend all prescribed classes.
- (ii) Not to absent himself from work without permission.
- (iii) Not to cause damage or waste to the property of the employer.

In all provinces the obligations of the employer are as follows:—

1. To receive the apprentice for the period stated and to teach, or cause to be taught, to him the trade specified. In New Brunswick, Ontario, Alberta and British Columbia there is the further obligation that he will be subject to the conditions in the apprenticeship standards and other regulations of the act. In Nova Scotia there are several further obligations.

All indentures specify the wages to be paid and the increases to be given from time to time. Manitoba, Saskatchewan and Nova Scotia also specify the hours of work. In Nova Scotia the indenture also includes an outline of the schedule of practical work

processes to be learned and the curriculum of technical class instruction to be followed. In New Brunswick all these items are covered in standards for each individual trade.

Training of Apprentices

Apprenticeship training, the booklet notes, may be divided into two parts: (1) Practical experience in manipulative or hand skills; (2) related theoretical and technical instruction or more simply—"skills and knowledges." The first of these could be acquired in a special class in the school, or on the job with an employer. The second ordinarily can be given only in a class.

The booklet points out that training in a class cannot itself turn out a finished mechanic; but must be supplemented with work experience on the job.

"At the same time experience gained across Canada in war emergency training and veterans' rehabilitation has demonstrated beyond a shadow of a doubt that greater trade competency can be acquired in class than in the same period working on the job, provided that the class instructor is not only a competent tradesman but has the teaching ability to impart his knowledge to the class in a clear and systematic way.

"The reasons for this are: (1) that all good mechanics with an employer are not necessarily good instructors; (2) when training and production are carried on together both suffer, but the former to a greater extent; (3) the breadth of experience any apprentice can obtain on the job, necessarily depends on the types of work the employer has in his shop from time to time, so that an apprentice may never have an opportunity of learning some of the specialized units of the work; (4) there is an inevitable tendency for an employer, in the interests of production, to retain an apprentice on certain routine or elementary types of work for a long time after such work has ceased to have any training value.

"In all apprentice plans under provincial legislation, the great bulk of the practical training is given on the job. But the class training which is being given in all provinces has proven most valuable, not only for the technical and theoretical instruction, but also as a means of filling in any gaps in the practical trade experience the apprentices have had on the job."

Noting that methods vary in the different provinces, the booklet outlines the situation in each.

(Early in January it was announced that in order to encourage the pre-employment training of apprentices, authority had been granted to amend the Dominion-Provincial Apprenticeship Agreements to permit the Dominion to give financial assistance for such training. A summary of the amending Order appears at the conclusion of this article.)

Apprenticeship in Quebec

Apprenticeship in many industries in Quebec is carried on under Government supervision, as provided by decrees made under the Collective Agreements Act, 1941. These decrees are administered by "parity committees" representative of employers and unions. The Apprenticeship Assistance Act of 1945, administered by the Provincial Department of Labour, provided a more systematic and better-supervised plan for training apprentices. Autonomous Apprenticeship Commissions set up in suitable areas make agreements with institutions under the Specialized Schools Act, or the Trade Schools Act, give courses of training to apprentices and determine conditions of apprenticeship, subject to the approval of the parity committee concerned. The plan is financed jointly by the Provincial Department of Labour and associations of employers and workers respectively. Up to the present, 15 commissions have been established for different trades and areas in the province.

The minimum age of entry is 16, except for moulders and boiler makers, where it is 20. The maximum age of entry is 25, except for printers, 20, and barbers, 30. No maximum age of entry has been set for motor mechanics. As in the other provinces, Quebec has given special attention to training apprentices for the building trades, and specific, detailed provisions have been set up for training in the printing trades.

Listed in the appendices are designated trades and the names and addresses of the several provincial Directors of Apprenticeship; the number of apprentices registered, classified by trades and also by provinces as at June 30, 1948, and the standards for ratios, wages and length of apprenticeship, established by each of the provinces.

Federal Assistance to Apprenticeship

Although apprenticeship is under the jurisdiction of the provinces, it is recognized that an adequate supply of apprentices is a matter of national importance. Consequently, the Dominion Government in

1944, entered into ten-year apprentice agreements with each of the provinces, except Prince Edward Island and Quebec, by which the Dominion matched dollar for dollar, certain approved provincial expenditures on vocational training. The Rehabilitation training program for war veterans was carried out co-operatively by the Dominion and the provinces, but the Federal Government assumed responsibility for all of the financial outlay.

In 1945, the Dominion made available to the provinces some \$30,000,000 over a period of ten years, for building, equipping and operating vocational schools, on condition that the provinces accepting this offer contribute on a dollar for dollar basis for this work. Up to the end of September, 1948, over \$7,000,000 of Dominion funds had been allocated for this work. There are, however, prescribed standards to which the Provincial Apprentice Acts and Regulations must conform, if Dominion financial assistance is to be granted. These are enumerated in the booklet and involve both the nature of the apprenticeship program and its administration in the province concerned.

Private Plans in Industry

An important section of the booklet is devoted to descriptions of private apprentice training programs that have been put into operation by several important Canadian industrial concerns. Among these are: Canadian Pacific Railway; Consolidated Mining and Smelting Company, Trail, B.C.; Consumers Gas Company of Toronto; McKinnon Industries, St. Catharines; Toronto Transportation Commission; Dominion Engineering, Lachine; Canadian Westinghouse, Hamilton; Canadian General Electric, Peterborough; Ford Motors of Canada, Windsor.

Apprenticeship in Great Britain

Sketching the history and development of apprentice training in Great Britain, it is stated in the booklet that apprenticeship originated in the British Trade Guilds of the eleventh and twelfth centuries. It was "the foundation for that skill and pride in craftsmanship which built up British industries." The earliest apprenticeship systems were designed for an era of small, local industries. "The employer was responsible, not only for the class training of the apprentices who lived with him, but also for their education, morals and general conduct." The period of apprenticeship was long, sometimes up to ten years, and as a rule no wage was paid.

The guild system broke down in the sixteenth century, and with the passing of the Statute of Artificers in 1563 a system of state control of apprenticeship was inaugurated which lasted until the industrial revolution some 250 years later. The advent of machinery and the factory system in industry led to a repeal of rigid state control, and since 1814 apprenticeship in Britain has been on a voluntary basis.

"Apprenticeship (in Great Britain) has continued to be the chief method of training in those industries where a high degree of manual skill is essential, such as the metal trades, shipbuilding, printing and the building trades." However, piece-work payment and job-breakdowns in large industrial plants have at times impeded a wider acceptance of apprenticeship programs. As a result, employers in some classes of industry have combined to promote apprenticeship and have in recent years set up committees, or councils, to study the problem and make recommendations. There has thus been "a growing tendency to indenture an apprentice to an industry, rather than to an individual employer." Standards have been set and there is a renewed insistence on thorough training, with increasing use being made of technical colleges. Some firms have established their own apprentice training schools. The starting age for apprentices is being gradually raised to fourteen, or even sixteen years of age and the age at completion is usually set at 21. Joint committees of employers and labour in the industry are responsible for formulating and carrying on apprentice training, with assistance, but not control, from the Departments of Education and Labour.

Since the close of World War II, it is stated that plans for training apprentices have been stepped up in Britain, especially for those whose apprenticeship had been interrupted by war service. These were given time credits and higher wages, which were paid in part by the State, for a maximum period of two years. Special study was given to apprenticeship in the coal mining industry, but "an indenture system was found to be neither practical nor desirable." A preliminary course of one year was given, followed by one year at specialized types of work. Apprenticeship for ship-building was controlled by a collective agreement with national and local joint committees and with part-time classes held on the employer's time.

In 1945, the building and construction industry adopted a national plan of apprenticeship and registration. The period of

apprenticeship was set at five years, but with generous time credits given for work in technical schools and a probationary period of six months. Compulsory attendance is required at part-time classes held on the employers' time. The wages paid to apprentices vary from 25 per cent of the journeyman's wage for 15-year-old apprentices up to 87½ per cent for 21-year-old apprentices. Although an objective of 25,000 new apprentices each year has been set, the average at present is about 23,000. Under the British Education Act of 1944, full time pre-employment classes lasting two or three years have been set up for the building trades in technical colleges.

Apprenticeship in South Africa

The booklet points out that prior to the passage of the Apprenticeship Act in 1922, there was very little apprenticeship in the South African Union. That Act, it is stated, "served as a model for some of the first Acts passed in the provinces of Canada." It applies only to some fifteen designated trades and the usual period of apprenticeship is five years. However, time credit is given to those with prior technical school training in the trade. A central committee, representing employers and labour, recommends to the Minister the number of apprentices to be employed, but the Act definitely stipulates that these shall not be restricted with a view to limiting the number of future journeymen.

Apprentices are allotted to an employer, not in a ratio to the number of his journeymen, but in proportion to his facilities for training them. The Departments of Education and Labour co-operate in supplying compulsory technical class training on a part-time basis of from four to eight hours a week, half of which is on the employer's time and half on the apprentice's. The operating cost of the schools is paid by the State. The minimum age of entry is 16 and the maximum age for completion is 26. It is pointed out that "as compared with Canada, the number of apprentices (in South Africa) is very much greater—mainly in the building trades, engineering, motor mechanics, printing and hair-dressing."

Apprenticeship in New Zealand

New Zealand passed an Apprentice Act in 1923. In 1944, a Royal Commission on Apprenticeship was appointed and several of its recommendations were embodied in the Apprenticeship Amendment Act of 1946. Under this Act a Commissioner and Deputy Commissioners were appointed and provi-

sion made for an expansion of local committees. Apprentice orders were made Dominion-wide instead of local, and provision was made for indenturing apprentices to industry, or to the State, as well as to an individual employer.

Shop apprentices can be transferred from one employer to another and where such transfers are made they are not included in the ratio of the receiving employer. Apprentices may also be transferred to a Department of the Dominion Government for training. The ratio of apprentices to journeymen is set for the industry, as a whole, and the number allotted to any one employer is determined by the employer's training facilities. All apprentices must undergo technical training, either in classes at technical colleges or in centres established by the industry, the employers contributing to the operating costs. Provision is also made in the Act for adult apprenticeship (those over 18 years of age) and for females. The period of apprenticeship is five years.

It is stated that in 1947, New Zealand had over 12,800 registered apprentices in some 36 trades, mainly in the building trades, engineering, motor mechanics, coach building, furniture, printing, baking and boot-making.

Apprenticeship in Australia

It is stated that the division of authority on apprenticeship between the Commonwealth and the Australian States "is not altogether clear," and, as a result, there have been conflicting opinions in jurisdictional matters. While the effective control and regulation of apprenticeship appear to rest with the States, the Commonwealth authorities are empowered to make apprenticeship awards.

Apprenticeship is compulsory for those trades (over 50 in number) brought under the authority of the Act in designated schedules or in apprenticeship awards. The period of apprenticeship is usually five years and technical class instruction is compulsory in most States for periods of from four to eight hours per week, generally in the employer's time. Most of these classes are held in technical colleges. The ratio of apprentices to journeymen usually varies from one to two up to one to five, and the minimum age of entry is 14, except in two States where it is 15 and 16 respectively. The total number of registered apprentices in Australia is greater than in Canada, both absolutely and in proportion to the population.

Apprenticeship in the United States

In the United States apprenticeship is under State jurisdiction, and some of the States have had apprenticeship legislation for many years. In 1937, however, Congress decided that the training of all-round skilled workers was a matter of national concern and established the Federal Apprenticeship Service by means of enabling or permissive legislation. Thus the basis of the policy is that apprenticeship should be voluntary, mutually satisfactory to employers and employees and developed jointly. A Federal committee, representing management, labour and education, develops standards and policies and a large field staff assists the States and industry in formulating programs. In addition, national joint committees of management and labour have been set up by some interested industries to work out national standards for their respective trades.

The basic standards drawn up by the Federal Service cover more than 100 trades requiring at least 4,000 hours to learn, with apprenticeship periods of from two to six years. The wage scale established provides for an average of 50 per cent of the journeyman rate over the whole period of apprenticeship. Related technical class instruction is required for at least 144 hours per year. Apprenticeship agreements must be in writing and are subject to review by the State Apprenticeship Council. By 1947, over 20 States had passed Apprenticeship Acts embodying Federal standards. By the summer of 1948, there were over 28,500 apprentice programs, with 200,000 apprentices registered in 96,000 establishments in the United States.

N.B. Copies of the booklet *Apprenticeship in Canada* may be obtained free of charge from The Training Branch, Department of Labour, Ottawa.

Encouragement of Pre-Employment Training for Apprentices

With the completion of veterans' rehabilitation training, vocational training and apprenticeship authorities have been keenly aware that it is of primary importance that the intake of civilian apprentices be increased, particularly for the building and construction industry.

At a conference of the Regional Directors of Canadian Vocational Training and the Provincial Directors of Apprenticeship held in Ottawa in October, 1948 (L.G., Dec., 1948, p. 1393) a resolution was passed requesting that the Apprenticeship Training Agreement be made more flexible with respect to the length of apprentice training in full-time classes.

In compliance with this request, an Order in Council (P.C. 5517) was adopted on December 21, 1948, giving authority to the Minister and through him to the Training Branch of the Department of Labour, to amend the Apprenticeship Agreements made between the Dominion and the provinces under the Vocational Training Co-ordination Act, 1942. The amendments are, of course, subject to the approval of each of the provinces.

The effect of the amendments will be to allow a person to take class training prior to commencing his apprenticeship instead of being allowed only a maximum of three months in class during each year. The new agreement, if signed by the provinces, will still allow class training during apprentice-

ship, but will not permit more than three months' training for each year of apprenticeship.

The normal period of such pre-employment training will be about six months, but its actual duration will be determined by each province. On its completion, trainees will be trade-tested and given time-credit in the period of training approximately in accordance with the degree of trade competency attained, provided such credit would at least equal the length of the training period in class. The apprentice will then be eligible for a higher starting pay.

The amended agreements will be effective from January 3, 1949. To comply with the terms of the amendment, the numbers to be admitted to pre-employment training in each occupation must be set by the provincial apprentice authorities after consultation with the appropriate trade advisory committee. In this way, any overcrowding in certain occupations can be prevented. Then, too, in order to qualify for the Federal grant, apprentices must be at least 16 years old. Moreover, the length of the pre-employment training and the syllabi of instruction are to be determined by each province. It has been recommended by Federal training authorities that the syllabi should be drawn up by the Vocational Training Branch of the provincial Departments of Education and based

on analyses of the occupations as put forward by the appropriate employers and trade unions.

Basically, the amendments are designed to make apprenticeship more attractive, so as to induce more civilian young persons to enter the skilled trades, and to provide the machinery for speeding up their training to meet the growing demand for skilled craftsmen as quickly as possible. Pre-employment class training and the resultant better starting pay for apprentices are considered to be important factors in attaining these objectives. In addition, it is anticipated that there will be fewer cancel-

lations and lay-offs after indentureship, because of better screening of applicants before being placed in employment. Then, too, the position of instructors should be made secure, by providing them with steadier employment. This is expected to be reflected in improvements in instructional standards. The new plan, if and when it is accepted by the several provinces, will not preclude a continuance of class training during apprenticeship. Both methods of class instruction may be used if the provincial apprenticeship authorities so desire.

ILO—A YEAR OF CHALLENGE

by David A. Morse

Director-General, International Labour Office

"The ILO is responding actively and vigorously to the needs of ordinary men and women everywhere. . . ."

The LABOUR GAZETTE reprints herewith from the United Nations Bulletin a short survey of the work of the International Labour Organization by its recently appointed Director-General.

Nineteen Hundred and Forty-Nine is a critical year, a year of challenge in which men and women everywhere must not hesitate or falter, but must press forward to meet the new conditions of a changing world with vigour, with confidence, and with a positive and dynamic faith in themselves and in their future.

How is the ILO responding to this challenge? Is it meeting the needs of ordinary men and women everywhere, who seek better conditions of life and work based on economic prosperity and social justice? How are the peoples of the world responding to the challenge of the ILO? Are they coming together and, in a spirit of give and take and mutual understanding, moving steadily and side by side along the road towards social progress?

In this short survey of the work of the past twelve months and of the plans for the coming year, seen as a single process of continuous growth and development from a moment only three months after taking up office as Director-General, I shall try to sketch the outlines of ILO policy and action that lie behind the meetings of Conferences in Geneva and San Francisco and Montevideo, behind meetings of industrial committees and technical committees,

behind missions and reports and publications and all the administrative machinery that can so easily confound the man-in-the-street.

During this period, I took over the office of Director-General from Mr. Phelan, to whom the ILO owes so much and under whose guidance the ILO came through the war unscathed and strengthened, then remodelled and re-equipped itself to meet the changing conditions of the post-war era and took up an honoured place in the network of international organizations. Thus strengthened and re-equipped, the ILO is ready to move more and more into the field of operations and to tackle the immediate practical problems that are confronting countries in the labour and social fields.

Full Use of Manpower Resources

Foremost among the questions on which the ILO has been actively engaged during the past year and on which it will intensify its work in 1949 is the problem of manpower, which in one form or another is acute in all parts of the world. One of the major factors underlying economic and

social reconstruction and development today is the training and full utilization of the manpower resources of the world, and the ILO is pursuing a vigorous and co-ordinated plan of action aimed at contributing in a concrete and practical manner to this end.

This problem has many aspects, including the organization of employment services, provision and development of facilities for vocational and technical training, exchange of trainees between countries, migration, statistics on manpower surpluses and deficits, and job classification. The ILO is dealing with these questions on a world-wide scale, on a regional basis, and also as they arise in particular industries, and at all times with the full participation of the representatives of employers' and workers' organizations whose experience and co-operation are essential to the success of any program in the field of manpower.

This year the International Labour Conference continued the world-wide activities of the ILO in this field, already well developed as regards vocational training, and laid down detailed provisions for the organization of employment services. Next year the Conference will carry its work a step further and will deal with the questions of vocational guidance and migration for employment.

Aid in European Recovery

However, each region of the world has its own specific problems in this field, and the ILO is adapting these world-wide standards, and developing and expanding its activities to meet their special needs. In Europe this work has been developed during the past year at the request of its regional organizations and will be intensified in the coming months. The immediate urgent problem in Europe is to make the fullest possible use of existing manpower resources to speed up economic reconstruction.

Much has already been accomplished by the ILO in gathering information on labour surpluses and deficits and in job classification for the use of governments anxious to organize the exchange of workers, and also in the collection and dissemination of information on technical training. To this will be added in the coming months further activities relating to employment service organization and to technical training and exchange of trainees, in which certain operational tasks will be undertaken to assist governments directly in their own plans.

In Asia technical training is a fundamental requisite for all programs of

economic development. An ILO expert recently carried out, in collaboration with ECAFE, a special survey of the needs for technical training and of the facilities to meet them, and made recommendations for their improvement. To carry this work further, I drew up a program of immediate action to go before the Governing Body of the ILO in early December, and which I am confident will make a practical contribution to the improvement of training facilities in Asia. As this work develops, it will be possible to decide where vigorous action might be taken by the ILO on other aspects of manpower problems which are acute in Asia.

In Latin America also there is a shortage of trained technical personnel. The ILO is therefore sending an expert to Latin America in the immediate future to survey, in collaboration with ECLA, the needs and facilities, within and without the region, for technical training, and to make recommendations on the basis of which it will be possible to draw up concrete proposals for practical action by the ILO. Migration from Europe to Latin America is a further problem which is receiving most careful and urgent consideration today, and particular attention will be directed to it at the Fourth Labour Conference of American States Members of the ILO to be held in Montevideo in the spring of 1949.

As part of its policy to study the major questions of social and labour policy as they arise in individual industries, the ILO has given special consideration in the past year, through its industrial committees, to the problems of recruitment and training in the textiles and petroleum industries and has made specific recommendations on the means of solving them. Next year special attention will be given to the problem as it arises in the construction industry and in coal mining.

In the execution of this comprehensive program the ILO must, however, ensure that it is integrated with the related work of the United Nations and the Specialized Agencies so that the fullest and most intelligent use is made of the resources of international organizations expended in this field. I have therefore invited the Secretary-General and the executive heads of the other Specialized Agencies to send representatives to meet with me in Geneva early in 1949 to examine this program in order to explore the contribution which the United Nations, including its Regional Commissions and other Specialized Agencies, might be able to make to implement and complete it, and, reciprocally, the contribu-

tion which the ILO can make to their related programs.

There are many obstacles to be overcome in the execution of this program. It is a challenge to the ILO, but I am confident that it will meet and rise above them, that it will make a concrete contribution to economic reconstruction and development—and thus to peace and stability—upon which basis alone the ultimate aims of the ILO may progressively be achieved.

If I have dwelt at some length on the manpower program of the ILO, it should not be supposed that the work of the ILO on other social and labour questions is not being followed up vigorously at the same time.

Industrial Relations

A vital and urgent problem in the industrial life of many countries today is the question of freedom of association and industrial relations, one of the principal questions which has been dealt with in the ILO from the outset. It is at present under active consideration by the International Labour Conference as a result of a request which the Economic and Social Council addressed to the ILO in the spring of 1947. After a preliminary discussion in 1947, the Conference in 1948 adopted an international convention guaranteeing freedom of association, which marks a major advance in the labour field.

In 1949 the Conference will continue consideration of the application of the principles of the right to organize and to bargain collectively, and will begin to deal with other important aspects of industrial relations, including collective agreements, conciliation and arbitration, and co-operation between public authorities and employers' and workers' organizations.

Special consideration has been given in 1948 to the problems of industrial relations as they arise in the chemical industry, the textiles industry, and the petroleum industry, and will be extended in 1949 to the construction industry. The ILO has also been studying the development of industrial relations in the particular conditions of the different regions, and at the Montevideo Conference will discuss the problems relating to the adjustment of labour disputes as they arise in the countries of Latin America.

Wages

Another aspect of labour and social policy which is of immediate interest to men and women workers everywhere today is the question of wages. At San Francisco the

Conference had an opportunity to survey the whole problem of wages in all its aspects and gave particular attention to labour clauses in public contracts and the protection of wages, which it will continue during the coming year. The questions of a guaranteed wage and of equal pay for equal work will also be receiving special attention in coming months. Wage regulation and the introduction of measures to enhance the earnings of primary producers are important problems of immediate concern to agricultural and other workers in Asia; these are being studied in connection with the preparations for the First Asian Regional Conference of the ILO which is to be held in the near future.

Safety and Health

Measures for the safety of workers and for the protection of their health are a fundamental element in proper conditions of work. A comprehensive Code of Safety Regulations for Industrial Establishments for the guidance of governments was adopted at a recent technical conference of the ILO, and in 1949 a similar conference will consider a detailed Code of Safety Regulations in Coal Mines, which has been in the course of careful preparation for some time.

Silicosis and other dust diseases have wrought terrible havoc among workers in certain industries, and a special conference on pneumoconiosis is being held in Australia in 1949 to study measures to protect workers from these dangers. In addition, the ILO has given particular consideration to safety and health measures for workers in the petroleum industry, as part of its study of conditions in individual industries.

Space does not permit me to indicate in detail the work of the ILO in other fields, including social security, women's work, the protection of children and young persons, maritime labour, and agricultural labour, on which work has continued unceasingly, nor to do more than mention the missions which have been sent to many countries of the world to advise governments on various aspects of labour and social policy. In particular, an Office mission was sent to Greece at the invitation of the Greek Government in 1948 to survey the social and labour legislation of Greece and to make recommendations concerning it. The mission has made a full report on its work which will soon be published. A similar request has recently been received from the Turkish Government, which it hopes to meet at an early date.

Regional Activities

I have already mentioned different examples of the regional work of the ILO, but I should like for a moment to underline this important development of ILO policy to meet the individual needs of different parts of the world.

The ILO is at present studying intensively certain social and labour problems which are of special urgency for Latin America. These include the question of industrialization, with special reference to factories, bearing upon the efficiency of the labour force, including, particularly, training and health conditions; also conditions of life and work of indigenous populations of American countries and conditions of employment of agricultural workers, in addition to migration and the adjustment of labour disputes to which reference has already been made. These will be given further consideration at the Fourth Labour Conference of American States Members of the ILO which will meet in Montevideo in the spring of 1949.

Special attention is likewise being given to fields of labour and social policy, which are of immediate concern to the countries of Asia. These include in particular technical training, labour inspection, welfare facilities, co-operation, and wage regulation. The First Asian Regional Conference of the ILO will devote special attention to them; and in preparation for that Conference a technical conference on labour

inspection in Asian countries was recently held in Ceylon, and an Office mission is at present in Asia to obtain first-hand information on these questions.

It is difficult to paint on such a small canvas a full picture of the varied activities of the ILO at the present time. However, I feel that sufficient indication has been given to the outlines of ILO policy and action during 1948 and 1949 to show that, through its current work on manpower, including employment service organization, training and migration, trade union rights, and industrial relations, wages, safety, and health, and its special emphasis on the development of regional activities to meet the special needs of each region, the ILO is responding actively and vigorously to the needs of ordinary men and women everywhere.

What is of the utmost importance is that the people of the world are accepting the challenge of current trends and meeting together in the ILO. With their support the possibilities of future action by the ILO are boundless. It has its roots in the people. Its aims are those of ordinary men and women everywhere. With their support, and in active collaboration with the United Nations and with other specialized agencies, I am confident that the ILO will play an increasingly important part in building a world of peace and social justice.

107th Session of the Governing Body of the International Labour Office

Carrying out its task of planning and directing the work of the ILO, the Governing Body decided to expand the work of the Organization in the field of manpower; dealt with the agendas of the next two sessions of the General Conference; studied the work of a number of ILO committees; and made plans for future meetings.

Canada was represented at the 107th Session of the Governing Body of the International Labour Office, held in Geneva, December 8-11, by Mr. Paul Coté, M.P., Parliamentary Assistant to the Minister of Labour, as substitute for Mr. Arthur MacNamara, the Canadian Government member. Mr. A. H. Brown, Department of Labour, acted as alternate to Mr. Coté; and Mr. Paul Renaud, Department of External Affairs, was adviser.

Election of Officers

Mr. Shamaldharee Lall, of the Ministry of Labour of India, was elected as Chairman of the Governing Body for the ensuing year. Mr. Lall succeeds Mr. Luis Alvarado of Peru. Mr. Léon Jouhaux, France, and Sir John Forbes Watson, United Kingdom, were elected Vice-Chairmen by the Workers' and Employers' groups, respectively.

Manpower and Vocational Training

Proposals looking towards an expanded manpower program for the ILO, on both a world-wide and regional scale, were put before the Governing Body by the new Director-General, Mr. David Morse.

The Governing Body endorsed Mr. Morse's view that United Nations activities in the field of manpower, including migration and vocational training, should be co-ordinated under the ILO; and authorized him to discuss this matter with the UN Co-ordinating Committee.

The principal object of the ILO's manpower activities in Europe is to help countries to make the fullest possible use of existing manpower resources in order to assist in economic recovery.

In accordance with directions given by the Governing Body last March (L.G., July, 1948, p. 723), the ILO has been compiling information on manpower surpluses and deficits, job classifications, and technical training, for the use of Governments interested in the exchange of workers.

Mr. Morse's new proposals include the development of systems of training of supervisors within industry, the international exchange of trainees, sponsoring of training films, the convening of meetings of experts from European countries, and other measures related to training, migration, employment service organization, and manpower generally.

Activities in the manpower field were also suggested for Asia and Latin America, in some sections of which there is great need for developing a more skilled and productive labour force.

The Governing Body gave approval to a number of specific proposals by the

Director-General; others will be submitted in more detail at the next session in February.

Application of Conventions in Federal States

Of particular interest to Canada was the inclusion of a new Order in the Standing Orders giving effect to the decision of the last ILO Conference to provide that when the Office sends out to the Member States a questionnaire relating to a proposed Convention, it shall include a question requesting the Federal States to indicate whether the subject matter of the proposed Convention would be regarded by them as being appropriate for Federal action or appropriate in whole or in part for action by the constituent units of the Federation.

Eight States of Chief Industrial Importance

Upon the report of the officers of the Governing Body, Italy was designated as the eighth state of chief industrial importance and Belgium was elected in place of Italy as one of the other eight States on the Governing Body.

The eight states of chief industrial importance are each entitled to a non-elective seat on the Governing Body. The other eight Government seats are filled at a triennial election by the International Labour Conference, as are the eight Employers' and Workers' seats.

The eight non-elective seats are now occupied by the United States, the United Kingdom, France, India, China, Canada, Brazil and Italy.

CALENDAR OF ILO MEETINGS

| | | Place |
|---------------------|--|------------|
| 1949 | | |
| January 13-27 | 3rd Session, Permanent Migration Committee | Geneva |
| January 31 | Preliminary Meeting of Technical Experts on Safety in Coal Mines | Geneva |
| February 21-March 8 | 108th Session, Governing Body | Geneva |
| March 15 | 2nd Session, Building, Civil Engineering, and Public Works Committee | Rome |
| April 25 | 4th Regional Conference of American States Members | Montevideo |
| April 19-30 | 3rd Session, Coal Mining Committee | Pittsburg |
| May 18 | 3rd Session, Inland Transport Committee | Brussels |
| June 8-30 | 32nd Session of the International Labour Conference | Geneva |
| Dates not fixed | Preparatory Meeting of Technical Experts on Safety in Coal Mines | |
| | Regional Asiatic Conference | China |

Proposed Revision of Maritime Conventions

The question of the possible revision of the Maritime Conventions adopted at the Seattle Conference of the ILO in 1946 was considered by a tripartite subcommittee of the Joint Maritime Commission last November. The subcommittee elected as its chairman Mr. V. C. Phelan, Department of Labour, Canada, who had been one of the Canadian Government Delegates to the Seattle Conference. It decided to recommend that four of the Maritime Conventions be revised in respect of a number of specific points; and urged that the Governing Body place these matters on the agenda of the next general session of the Conference, to be held at Geneva in June, 1949.

Over the opposition of the Employers' Group, the Governing Body accepted this suggestion. The four Conventions are Nos. 70 (Social Security for Seafarers), 72 (Vacation Holidays with Pay for Seafarers), 75 (Crew Accommodation) and 76 (Wages; Hours; Manning).

(The other items on the agenda of the June, 1949, Conference include various aspects of Industrial Relations; three Wages items; Vocational Guidance; Fee-Charging Employment Agencies; and Migration for Employment; as well as the standard items of Director-General's Report,

Financial and Budgetary Questions, and Application of Conventions.)

Agenda of 1950 Conference

An agenda was approved by the Governing Body for the 33rd Session of the International Labour Conference, to be held in 1950.

The four major items will be: Industrial Relations; Equal Pay for Men and Women Workers for Work of Equal Value; Agricultural Labour; and Vocational Training of Adults including Disabled Persons. In addition the agenda will include the standard items of Director-General's Report, Financial and Budgetary Questions, and Application of Conventions.

Social Security

The Governing Body decided to establish the Correspondence Committee on Social Security as a permanent Committee of Experts on Social Security to meet as necessary but, in principle, not less frequently than once a year.

Mr. C. A. L. Murchison, Unemployment Insurance Commission, is Canadian member of this Committee.

Industrial Committees

The Governing Body approved a number of meetings of industrial committees for 1949. It also approved a statement on the status of industrial committees, the text of which is printed below.

The ILO and its Industrial Committees

Since their formation in 1945, the Industrial Committees of the ILO have played an increasingly important role in the work of the Organization. Composed of representatives of management, labour and government from the countries most directly concerned in each industry, the Committees have considered a wide range of problems applicable to each particular industry. Questions as to the scope of the Committee's work, and the form that their decisions should take, have been the subject of discussion recently by the Governing Body of the ILO, which at its 107th Session adopted the following statement clarifying the functions of the Committees.

The purpose of this document is (i) to explain the place of the Industrial Committees within the structure of the International Labour Organization, and (ii) on the basis of experience so far gained, to offer certain general guidance as to the way in which the work of the Committees should be developed in order that they may make their most effective contribution towards the work of the Organization as a whole.

The Main Structure of the ILO

The ILO is composed of the International Labour Conference, the Governing Body and the International Labour Office.

The International Labour Conference

The Conference is a world Assembly for labour and social questions which meets at least once a year. Each State Member

of the Organization is under the obligation to be represented at the meetings of the Conference by four delegates—two representing the Government, one representing Employers and one representing Workers. Governments nominate Employers' and Workers' delegates in agreement with the most representative organizations of employers and workpeople.

The principal function of the Conference is to discuss and adopt International Regulations embodying minimum labour standards. These Regulations take the form of International Treaties known as Conventions, or of Recommendations. These may be of a general character, or they may relate to particular industries.

The Conference also reviews annually the general international developments in the sphere of economic and social affairs.

The Governing Body

This body is composed of sixteen Government representatives, eight representatives of Employers and eight representatives of Workers. Eight Government members are representative of the States of chief industrial importance; the other eight, and the Employers' and Workers' representatives, are elected every three years by their respective groups at the Conference.

The Governing Body is generally responsible for the planning and direction of the work of the Organization and for framing the Budget. It fixes dates and agendas of meetings. It determines the composition and terms of reference of committees and acts as a co-ordinating agent. Under the Conference it is responsible for the conduct of business between Conferences and for making authoritative decisions binding on the Organization. It is similarly responsible for the relations of the Organization with the United Nations and other international organizations.

The International Labour Office

This is the permanent Secretariat of the Organization and is responsible to the Governing Body. It services meetings held under the aegis of the ILO, it collects and studies information derived from all parts of the world, prepares drafts of International Regulations, produces publications and undertakes technical missions to assist Governments. The Office has branch offices and correspondents in many countries. A special section of the Office has been set up to deal with the work of Industrial Committees.

Other Organs

Within this general framework, a place has been found for Regional Conferences, a Joint Maritime Commission, Tripartite Technical Conferences, Industrial Committees and Committees of Experts on various technical subjects. The deliberations of all these various organs are reported to the Governing Body, which decides the action most appropriate to be taken on them.

Objects of the Industrial Committees

Like other Committees, the Industrial Committees were set up by the Governing Body and report to it. They are new bodies. The first Committees were set up and met in 1945. Their object was to fill a gap in the structure of the ILO. The International Labour Conference effectively covers the field of general policy. These Committees are to provide machinery through which the special circumstances of the principal international industries can receive special and detailed consideration. By bringing together representatives of those engaged in the industries, the Committees afford an opportunity for the discussion of common problems on the international plane in the same way as within the individual countries.

Work of the International Labour Conference and of Industrial Committees

In the light of experience and in order to avoid any confusion between the work of the International Labour Conference and the Industrial Committees, the Governing Body has decided that the scope of the Industrial Committees should be defined as follows:—

- (a) primarily, the consideration of particular and practical problems of the industry with which the Committee is concerned;
- (b) secondarily, the consideration of general problems which have been decided by the International Labour Conference, but only in so far as they affect the industry with which the Committee is concerned;
- (c) thirdly, and exceptionally, the consideration of problems which have not been finally dealt with by the Conference, but only in so far as they affect the industry with which the Committee is concerned.

In order that Industrial Committees can achieve the objectives outlined by the Governing Body in the agenda approved for each meeting, subjects not on that agenda should not be discussed by the

Committee for the purpose of arriving at reports or resolutions unless by agreement of a majority of each of the three groups: Government, Employers and Workers.

The Governing Body also wishes to offer the following guidance. The distinction between questions affecting a particular industry and questions of a general character has caused some difficulty in the operation of Industrial Committees. In considering the relationship between the Committees and the Conference, the distinction between particular and general questions is, of course, only a rough and ready one. The Conference has dealt in the past, and will deal in the future, with detailed problems affecting particular industries for which international regulations are needed, although the Conference will, no doubt, have the benefit in suitable cases of the preparatory work of Industrial Committees. On the other hand, there will be some problems the consideration of which by Industrial Committees cannot be divorced from the more general aspects of the subject.

When Industrial Committees in the course of their examination of the problems of their own industries are dealing with subjects having a more general aspect, special care will be needed in two separate types of case in order to keep the respective functions of the Conference and of the Committees clearly defined:—

(1) *Where the question to be considered by the Committee has already been the subject of final consideration by the Conference.*

Clearly the Committees should proceed on the basis of the decisions arrived at by the Conference and not base their work on principles contrary to those decisions, but the application of the principles to the particular circumstances and problems of individual industries might well be a necessary task for them to undertake and one in which their special knowledge should give valuable results. Moreover, where circumstances have changed since the consideration by the Conference, they may wish to suggest to the Governing Body on the basis of the circumstances existing in their own industry reasons why the matter might be appropriate for re-examination by the Conference;

(2) *Where the questions are currently receiving the attention of the Conference.*

In order to avoid any undesirable duplication, the Governing Body will exercise discretion in placing such matters on the agenda of Industrial Committees and

will define clearly those aspects of the question which the Industrial Committee is to consider. In so far as they do appear on the agenda of Industrial Committees, it is clearly desirable that the Committees should not take action which would be regarded as prejudicing the deliberations of the Conference, and that they should proceed by way of a report to the Governing Body. At the same time the fact that the Governing Body has placed a subject on the agenda is a recognition that the Governing Body regards it as one of particular interest to the industry concerned and one that it is proper, within the limits of the agenda item, for the Committee to discuss. The work of a Committee on such subjects may in fact well be a means of giving valuable guidance and information to the Conference, based on practical considerations arising in an important international industry. It may be that an Industrial Committee can present to the Governing Body for transmission to the Conference a unanimous view on the subject appearing on their agenda. Alternatively, it may present in an agreed report the various views expressed by the members of the Committee.

There will also be cases where the general principles of a subject have not received and are not receiving the consideration of the Conference. In such cases, Industrial Committees may wish:—

- (a) to ask the Governing Body to consider the desirability of arranging for the subject to be dealt with by the Conference in its particular application to their industry; or
- (b) to suggest that the subject is of such general importance as to merit consideration by the Conference in its wider aspect.

Form of Industrial Committees' Conclusions

Whatever form may be taken by the conclusions reached by an Industrial Committee, the first essential is that those conclusions shall be the outcome of a full and free exchange of views between the members of the three groups. The actual form of the conclusions will largely be determined by the nature of the subject under discussion and the particular circumstances obtaining at the time when it is discussed. The conclusions of Industrial Committees have hitherto normally taken the form of resolutions. This is appropriate in some cases, but by no means in all. There have been subjects, and are likely to be more in future, in which real progress

and practical results will be achieved by framing agreed reports or memoranda designed to derive the fullest benefit from the special knowledge of the members of the Committee, and to lay a firm basis for further action by the interested parties, by the Committees themselves, by the Office, the Organization and other international authorities.

Resolutions, reports or memoranda will, in the first instance, be directed to the Governing Body. They may relate to such matters as the following:—

- (a) suggestions for application by the Employers' and Workers' organizations in the various countries including matters considered more appropriate for joint negotiation than for legislative action;
- (b) suggestions for the consideration of Governments;
- (c) suggestions concerning questions which the Governing Body may wish to bring to the attention of the United Nations or other international organizations;
- (d) proposals for action by the International Labour Organization which may be settled by the Governing Body, referred to the International Labour Conference or to other conferences or committees of the Organization, or acted upon by the International Labour Offices;
- (e) proposals concerning studies and enquiries which the Office may be called upon to undertake;
- (f) recommendations as to the subjects which might be examined at future sessions.

The nature of the action to be taken on these conclusions will be determined by the Governing Body and reported to the Governments concerned and to the Industrial Committees.

Action by Governments and Employers' and Workers' Organizations

Certain action on the Committee's deliberations will be proper to the Office, the Governing Body or the Conference, but a great deal will depend on the individual Governments and Employers' and Workers' organizations concerned. Clearly this is so in the case of the meetings, for without goodwill on all sides, good results cannot be expected. It is also true in the particular countries. Governments will need to supply information and reports to the Office to enable the work of the Committees to be adequately prepared and followed up. Governments and Employers' and Workers' organizations acting together in their respective countries through the machinery deemed most appropriate will also need to pay due regard to the deliberations of the Committees if they are to result in improvement of labour and social conditions in their respective countries and throughout the world. To that end, the Committees in their deliberations will no doubt keep in mind what is reasonable and practicable and how far the measures they advocate are capable of wide application.

It must be emphasized that the successful operation of Industrial Committees within the framework of the International Labour Organization cannot be assured by the establishment of procedural rules. It is hoped that the general guidance given in this note will be helpful. More important, however, is the obligation which rests upon all concerned to promote a more widespread knowledge and appreciation of the aims and methods of the Organization and the determination to evolve a practical technique within that framework in the spirit of mutual co-operation.

UNIVERSAL DECLARATION OF HUMAN RIGHTS

On December 10, 1948, the General Assembly of the United Nations adopted the Universal Declaration of Human Rights. Many of these rights have a special interest for labour. The text of the Declaration is printed below.

Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world;

Whereas disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people;

Whereas it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against tyranny and oppression, that human rights should be protected by the rule of law;

Whereas it is essential to promote the development of friendly relations among nations;

Whereas the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom;

Whereas Member States have pledged themselves to achieve, in co-operation with the United Nations, the promotion of universal respect for and observance of human rights and fundamental freedoms;

Whereas a common understanding of these rights and freedoms is of the greatest importance for the full realization of this pledge;

Now therefore the General Assembly proclaims this Universal Declaration of Human Rights as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the

peoples of Member States themselves and among the peoples of territories under their jurisdiction.

Article 1

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Article 2

(1) Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status.

(2) Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether this territory be an independent, Trust, Non-Self-Governing territory, or under any other limitation of sovereignty.

Article 3

Everyone has the right to life, liberty and the security of person.

Article 4

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

Article 5

No one shall be subjected to torture or to cruel inhuman or degrading treatment or punishment.

Article 6

Everyone has the right to recognition everywhere as a person before the law.

Article 7

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

Article 8

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by-law.

Article 9

No one shall be subjected to arbitrary arrest, detention or exile.

Article 10

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

Article 11

(1) Everyone charged with a penal offence has the right to be presumed innocent until proved guilty according to law in a public trial at which he has had all the guarantees necessary for his defence.

(2) No one shall be held guilty of any penal offence on account of any act or omission which did not constitute a penal offence, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offence was committed.

Article 12

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

Article 13

(1) Everyone has the right to freedom of movement and residence within the borders of each state.

(2) Everyone has the right to leave any country, including his own, and to return to his country.

Article 14

(1) Everyone has the right to seek and to enjoy in other countries asylum from persecution.

(2) This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

Article 15

(1) Everyone has the right to a nationality.

(2) No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

FURTHER ACTION ON HUMAN RIGHTS TO BE UNDERTAKEN

The United Nations Commission on Human Rights will have as its next task the working out of international conventions in the field of human rights, and of measures of implementation or enforcement.

Mrs. Eleanor Roosevelt, Chairman of the Human Rights Commission, described the acceptance by the General Assembly of the Universal Declaration of Human Rights as "only the first step."

She expressed the hope that at the next Assembly the first Covenant, including methods of implementation, would be presented and accepted.

"In the meantime," she continued, "a great satisfaction should permeate the thoughts of all men, for the great documents declaring man's inherent rights and freedoms which in the past have been written nationally, are now merged in an international, universal Declaration.

"Forty-eight nations, through their representatives in the United Nations,

have accepted this Declaration as a standard declaration of principles in the field of the rights and freedoms of man. In doing so, the nations have agreed that they would strive for the attainment of these standards. No nation voted against the Declaration, two nations were absent and eight abstained.

"Naturally, it is not a perfect document and being as it must be, a composite document to meet the thoughts of so many different peoples, there must be a considerable number of compromises.

"On the whole, however, it is a good document. We could never hope for perfection no matter how many times we revised a Declaration, for one could always see something a little better that one might do.

"For that reason, I think a beginning had to be made and in the light of experience, changes may be made in the future just as they have been made in the past in many of the other great documents of history."

Article 16

(1) Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.

(2) Marriage shall be entered into only with the free and full consent of the intending spouses.

(3) The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

Article 17

(1) Everyone has the right to own property alone as well as in association with others.

(2) No one shall be arbitrarily deprived of his property.

Article 18

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

Article 19

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

Article 20

(1) Everyone has the right to freedom of peaceful assembly and association.

(2) No one may be compelled to belong to an association.

Article 21

(1) Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.

(2) Everyone has the right of equal access to public service in his country.

(3) The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

Article 22

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

Article 23

(1) Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.

(2) Everyone, without any discrimination, has the right to equal pay for equal work.

(3) Everyone who works has the right to just and favourable remuneration insuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.

(4) Everyone has the right to form and to join trade unions for the protection of his interests.

Article 24

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

Article 25

(1) Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.

(2) Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

Article 26

(1) Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.

(2) Education should be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and

friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.

(3) Parents have a prior right to choose the kind of education that shall be given to their children.

Article 27

(1) Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.

(2) Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

Article 28

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

Article 29

(1) Everyone has duties to the community in which alone the free and full development of his personality is possible.

(2) In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

(3) These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

Article 30

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

WORK OF INDUSTRIAL HEALTH DIVISION, OTTAWA

The following article, reprinted from the Annual Report of the Department of National Health and Welfare, describes the services provided by the Department's Industrial Health Division during the fiscal year ended March 31, 1948, in seeking to improve the health and occupational environment of the working population.

Canada has become one of the leading industrial nations as a result of its industrial expansion during the war and post-war years. Between 1939 and 1946, the value of manufactured goods and foreign trade increased threefold, while the number of employees in manufacturing alone rose from 658,000 to 1,119,000. Today, persons gainfully employed in all occupations number about 4,800,000. The sickness rate of this vital section of our population is estimated to be nine days per annum, and represents a loss of over 500 million dollars to our national income.

The efforts of the Industrial Health Division are directed toward the alleviation of this important public health problem through the improvement of the health and occupational environment of the working population. To discharge this function, under Section 5 (b) (h) and (i) of the Department of National Health and Welfare Act, the division maintains

medical, nursing and laboratory staffs, which provide the following facilities:—

- (a) medical and nursing consulting services, for improving and promoting plant medical programs and for appraising industrial health problems;
- (b) laboratory services, for research and investigation of industrial health hazards;
- (c) education and technical information services, for promoting personal and plant health practices.

In co-operation with provincial departments of health, the division is applying its professional and technical facilities to various industrial health projects of a continuing or emergency nature.

The division also maintains contact with industrial health agencies abroad and holds membership on a number of national and international committees and associations dealing with various phases of industrial

health. Supplementing this part of the division's activities, an index of current literature is maintained and there is a constant flow of information on new developments in the industrial health field between the federal and provincial levels.

Co-operation with Provincial Authorities: Ontario

During the past fiscal year, the division collaborated with the Ontario Division of Industrial Hygiene in preparing a reference manual on occupational diseases. The manual includes a list of occupations in Canada, with a description of their actual and potential health hazards, and will be a reference guide for physicians who treat industrial workers. This publication contains certain features relating to industrial diseases in Canada which are not readily available from other sources.

Saskatchewan

With the assistance of the division's medical staff, the field unit conducted an environmental survey of certain industrial establishments in Saskatchewan. This included a study of working conditions, the potential health hazards related to materials and processes used, and the existing measures for health supervision. The field unit continued its survey of the carbon monoxide hazard in garages and began an investigation of environmental hazards among agricultural workers.

Alberta

The field unit continued its environmental survey of the coal mining industry in Alberta, to determine the extent of the silicosis hazard and to provide the basis for preventive measures in the field of legislation, engineering, and medical services. Environmental studies in other industries are being undertaken, in co-operation with various provincial agencies.

Nova Scotia

Investigation of the silicosis hazard in various industries was extended and X-ray examination of workers was undertaken by provincial authorities. In accordance with the original plan for the unit, full responsibility for its operation was assumed by the province at the end of the fiscal year and a permanent provincial division of industrial hygiene was established.

Medical Advisory Services

A series of lectures and demonstrations for industrial and public health nurses in the Ottawa-Hull area was sponsored by the division's medical and nursing staff. The

project was designed as an extension course for the nurses engaged, or interested, in industrial nursing, and will serve to promote similar courses in other centres. Details of the course were published in the *Industrial Health Bulletin* of the division, with excellent response from nursing groups throughout Canada and in the United States.

In co-operation with the Ontario Division of Industrial Hygiene, further steps to promote industrial nursing services in the Ottawa area were undertaken. Efforts are now being made to provide local industries with part or full-time nursing service through personnel of local nursing groups. In this way, procedures for group servicing of small industries are being developed which can be applied to many other parts of the Dominion where small industrial establishments predominate.

In the past year, members of the medical and nursing staff have delivered papers on health problems of Canada's working population to meetings of public health, medical and scientific associations, and at university courses. The staff also participated in conferences of various professional associations in Canada and the United States.

Education and Technical Information

The division continued its program of health education to industry and labour by distributing 150,000 copies of posters and pamphlets in French and English, through provincial health departments. Over 30,000 copies of the most recent pamphlet *Skin Diseases in Industry* were requested by various industries.

During the year, 35,000 copies per month of the division's *Industrial Health Bulletin* were distributed in Canada and abroad. This bulletin was supplied to all Canadian establishments having more than 15 employees, to 2,000 trade union locals, to provincial and professional agencies and to other interested bodies. A large correspondence with industrial and labour groups on the articles printed in the bulletin was a significant feature during the year.

A consultative service on industrial health problems was provided to federal government departments, provincial departments of health, private industry and individuals. During the past year, the division supplied information on the health hazards of solvents, the effectiveness of various methods for air purifications, environmental conditions, such as lighting, noise, ventilation and many other industrial health problems of local or national concern.

Laboratory Service

During the year the laboratory service of the division was directed toward technical solution of health problems having their origin in the working environment of the Canadian employee. This scientific approach to industrial health problems referred to federal level was combined with the medical and educational approaches to provide a broad co-ordinated attack on the causes of ill-health among Canadian wage-earners.

A major laboratory project undertaken during the year was the development of a simple device for estimating small quantities of methyl bromide in air. Methyl bromide is a highly volatile material and intensely toxic to the human being. It has a specific usefulness as an aircraft fire extinguisher, as a fumigating agent and as a refrigerant. To protect the health of employees who may be exposed to the vapour of methyl bromide, health authorities require to estimate the amount of the substance in workroom air. Because of its high toxicity not more than 50 parts of methyl bromide in 1,000,000 parts of air can be tolerated in a work space. The laboratory undertook to develop a device which would simply and accurately measure such small quantities. Successful completion of this project was in sight by the end of the fiscal year.

A contribution to the continuing national problem of silicosis was made through the medium of the division's laboratory service. This concerned one of the besetting difficulties in connection with prevention of silicosis among employees in the dusty trades—the difficulty of estimating the amount of silica in dust and working materials. The chemical method for estimating silica has always been lengthy and liable to a considerable range of error. Accordingly, advantage has been taken of the recent advances in the X-ray field, and during the year, a Geiger Counter X-ray spectrometer was acquired for the estimation of silica by the X-ray method. This modern device makes possible rapid estimations with high accuracy. Following its standardization, which was under way by the end of the year, analyses of dusts, rocks and other materials will be conducted for provincial industrial health agencies, as a service under section 5 (i) of the departmental Act.

Health problems associated with office machine work have come to the forefront of the industrial health field in the major industrial countries, during the post-war

period. In line with this broadening scope of industrial health, the laboratory of the division has been conducting a study among Hollerith machine operators in two dominion government departments. During the fiscal year, two lengthy reports on working conditions of such operators have been prepared for the departments concerned. One of these reports dealt with noise and the other with absenteeism and production in relation to environmental conditions.

Increasing attention directed toward the health of the federal civil servant has brought to light working conditions having technical aspects comparable to many occupations in Canadian industry. In order to provide full health protection for civil servants so engaged, the division has co-operated with the Civil Service Health Division of the department in evaluating these industrial-type working environments. The laboratory has carried out a survey of the air in the refinery section of the Royal Canadian Mint and has made recommendations to ensure an air supply free from toxic materials, such as tellurium, arsenic and selenium. Along the same lines, an environmental survey was undertaken at the Mines Laboratories of the Department of Mines and Resources, to ensure protection of health of laboratory personnel against possible exposure to radiation from ore concentrates and other materials handled.

The flow of scientific material related to health standards for working environments has accelerated markedly throughout the world during the post-war period. To keep pace with this flow, membership of divisional laboratory personnel on the Safety Code Correlating Committee of the American Standards Association was accepted during the fiscal year. Membership on the Committee on Maximum Allowable Concentrations of the same association continued. Information gained through the proceedings of these committees, and from scientific interchange with laboratories abroad, was supplied to various provincial health agencies.

The highly technical nature of the laboratory projects carried on during the fiscal year reflects the increasingly technical complexity of Canadian industry. Recent experience has demonstrated clearly that new chemical and physical agents introduced into manufacture generally bring with them some health problems requiring a technical solution. Strong emphasis has therefore been necessary at the laboratory level of the division's work.

COMPANY WAGE POLICIES IN THE UNITED STATES

A survey undertaken at Princeton University investigates the influences that cause companies to decide on the level of wages they should pay.

Replies from employers indicate that wage policies and practices are "much more human and diverse than conventional theory postulates," and that company wage policy is "influenced and guided by a mixture of economic and non-economic factors."

"There are few subjects about which more is written and less is known than wages," the Industrial Relations Section of the Department of Economics and Industrial Relations, Princeton University, states in a report *Company Wage Policies*, issued in the autumn of 1948. (Research Report Series: No. 77.)

The report is based on data obtained in 1946 by questionnaire and interview from 107 manufacturing companies, considered to be fairly representative of American industry. In size they range from 80 to 300,000 employees. Eighty-eight are multi-plant companies, 79 having manufacturing operations in two or more labour-market areas. Only six of the firms are known to have been operating completely non-union. Most dealt with CIO or AFL unions.

The report, it is stated, is an "exploratory investigation without recommendations."

It attempts to supply answers to such questions as: What are the wage policies and practices of manufacturing firms? What basis or bases do companies use in determining plant wage levels and changes in plant levels? How consistently do companies follow selected criteria like the market, a job evaluation plan, worker productivity, or some other standard? How has company wage policy been affected by the spread of unionism and collective bargaining? What wage policies have firms found from experience to be unsatisfactory? What is company policy toward increased uniformity in wage scales between firms in the same industry?

Summary of Findings

It was found that, whatever their wage policies, practically all companies rely on private wage surveys. Of the companies included in the survey, half follow the policy of adjusting their wage scales to community levels, a fourth are guided by some combination of community and industry levels, and the remaining fourth are

equally divided between industry orientation of their wage scales and the application of a uniform scale in all plants of a multi-plant concern.

Of the replying companies, two-thirds reported that their scales were approximately equal to the average for the locality or for the industry; a third stated that their scales exceeded one or both of those averages. Only two firms indicated that their whole scale was below either community or industry levels, although a number of multi-plant concerns admitted that one or more of their plants were under one of those averages.

"The weaknesses of a policy of adjusting to community or prevailing rates have become increasingly evident, especially with widespread unionism and a series of 'wage rounds.' However, the policy still has a number of advantages for many firms, and those most aware of its weaknesses have been unable to develop a satisfactory alternative. The use of productivity measures as a basis for inter-company wage levels is not as yet generally practicable."

"Of the companies replying, one-third lead or desire to lead in general wage increases, one-third make wage-level changes at the same time as the rest of the industry, and the other third is about equally divided among (a) keeping in line with community changes; (b) following competitors; and (c) no consistent policy or pattern.

"Industry orientation of wage policy appears to have been increasing with greater inter-company co-operation in wage changes, partly as a result of trade unionism. Such orientation is especially prevalent in well-defined industries like oil, steel, rubber, meat-packing, automobile assembly, airframe manufacture, glass, marine transportation, railroads, and textiles. Multi-plant firms operating within the orbits of two or more such industries generally follow the separate industry patterns (sometimes national-union patterns)."

Increased labour organization since 1932 has been a significant influence on wage policy in many companies, where it has led to the adoption of specific and well-defined policies (including job evaluation), more consistent application of policies, and, it is stated, the abandonment by some companies of the policy of paying above community or industry rates or of attempting to lead in general wage increases. Some companies report that unions have considerably increased the costs or disadvantages of wage leadership.

"The aims of company wage policy are frequently expressed in terms of fairness, employee loyalty and satisfaction, and company prestige as well as in terms of labour supply and other economic factors," according to the replies. "Although generally such ethical and psychological factors have significant economic consequences, some firms seem to give them semi-independent consideration."

At the time the survey was made in 1946, the responding companies considered the most important factors in general wage increases to be wages paid by other firms, union pressures, and the cost of living. Interviews indicated that union pressure was more influential than some written replies seemed to indicate.

Dealing with the influence of labour supply on wage rates, the report states: "The real significance of labour-supply factors in wage policy and wage changes is difficult to assess by this type of survey. Three-fourths of the replying companies stated their wage-policy aims in terms that included influencing job applicants. Some 20 out of 63 answering firms mentioned 'shortages or surpluses of qualified labour' as an important, but not the most important, factor in wage-level changes, often explaining that such shortages were significant, however, only for some occupations (especially skilled trades) at particular times.

"Eight firms paying below the average of community or industry rates in some or all of their plants reported no special trouble in recruiting qualified labour, most of them giving such explanations as cleaner work, regular employment, and the existence of different labour markets in the same locality. Some companies paying above the average of community or industry levels doubt that they obtain and retain better labour as a result, and other companies that have ceased to follow a policy of paying above community or industry averages believe that they have suffered no relative disadvantage in the

labour market as a result of the elimination of such a wage differential."

Comparison of a company's policy on a variety of wage matters indicates that many firms do not consistently follow the market criterion of prevailing rates but, where there is a conflict, may instead adhere to a job-evaluation formula, a program of company-wide uniformity, some notion of fairness, or some measure of productivity, the report continues. "A number of companies frankly stated that with labour organization their policy was one of opportunism or of strategy that involved more than purely economic objectives such as profit maximization."

Implications for Wage Theory

The results of the survey, "although partly impressionistic and the expression of employer opinion," have some significant implications for wage theory, the report states.

"Clearly a significant gulf exists between company wage policies or practices and economists' wage theories. Industrialists follow policies and practices that not only disregard conventional wage theory but may actually run counter to it. Conventional wage theory, for example, neglects important influences and company considerations that have arisen as a result of widespread trade unionism. It also disregards non-economic considerations such as the stress that some companies place on ethical notions, employee loyalty, and company standing, as independent factors in wage determination.

"Orthodox wage theory runs in terms of economic forces bringing about a unique wage determination where demand and supply are equal. The company replies, however, clearly indicate that employers have been free to select where within a range of rates they wished to establish their scales. Prior to unionization, their location within the range was partly a matter of historical accidents and psychological desires that could not be adequately explained merely in economic terms. Unions, with their political considerations, have tended to make purely economic explanations of wage determination even more unsatisfactory.

"Any relationships between wage rates and labour supply for individual firms are obviously much more tenuous than conventional theory has assumed. The replies indicate considerable employer belief that a company differential of 5 or 10 per cent above industry or community levels could be eliminated without causing adverse effects on the supply of labour available

to that company. Other companies report that, especially for unskilled and semi-skilled jobs, it is not necessary to pay as much as the dominant firms or industry in a community in order to obtain and retain high-grade labour.

"Employer wage policies and practices are much more human and diverse than conventional theory postulates. Employers do

not mechanistically follow a single principle or pattern. As the quotations indicate, company wage policy is influenced and guided by a mixture of economic and non-economic factors. The task of industrial relations research is to develop a more human and realistic theory of wages, based in part on an adequate understanding of employer behaviour."

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

INDUSTRIAL RELATIONS AND CONCILIATION

Peace and harmony prevailed during December in most sections of industry coming under Dominion jurisdiction.

Introduction

The month of December was without unusual incident in the field of labour relations within the jurisdiction of the Federal Department of Labour. Industrial peace existed in almost all branches of industry, and, with the possible exception of ocean-going shipping, promised to continue well into the year 1949.

Of chief interest and importance among the industrial disputes settled during the month was one between the General Longshoremen's Union Local No. 273 of the International Longshoremen's Association and various steamship companies operating from Saint John, N.B., represented by the Shipping Federation of Canada, Inc. Some 3,000 longshore workers were involved.

Under the terms of the settlement, which was negotiated by the Department's Industrial Relations Officer for the Maritimes, an increase of 13 cents per hour was granted in the wage rates for handling general cargo, bringing the basic rates up to \$1.38 per hour for day work and \$1.48 per hour

for night work. A similar increase for handling bulk cargo brought the wage rates for such work up to \$1.48 and \$1.58 for day and night work respectively. A premium of 20 cents per hour above bulk cargo rates was granted for longshore work involving the handling of ammonium nitrate fertilizer. The men were also guaranteed a minimum of three hours' wages, instead of two hours' wages as formerly, when ordered out after 7:00 p.m. on week days, except when weather conditions prevent working or when a ship is finishing. Time and one-half rates of pay will be paid in future for work on Saturday afternoons and all evenings during the period from January 1 to April 30, while similar work during the period from May 1 to December 31 will continue to be paid for at double time rates of pay. For work in refrigerators, a premium of 10 cents per hour will be paid when work is performed at temperatures lower than 30 degrees Fahrenheit, instead of 26 degrees as formerly.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the wartime Regulations in 1944.

Proceedings begun under the wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to

bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; an officer stationed in Winnipeg covers the provinces of Saskatchewan and Manitoba and Northwestern Ontario; two officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of December. During the month, the Board received five applications for certification, held seven hearings, issued three certificates designating bargaining agents, ordered one representation vote, rejected two applications for certification and two requests for reconsideration of decision in certification cases.

Applications for Certification Granted

(1) Canadian Merchant Service Guild, Inc., for a unit of employees of the Transit Tankers and Terminals, Limited, Montreal, P.Q., comprising licensed deck officers employed aboard the ss. *Transbay*, ss. *Transtream*, ss. *Transriver*, and ss. *Translake*. Masters were excluded from the bargaining unit.

(2) National Association of Marine Engineers of Canada, Inc., for a unit of

employees of the Canadian Pacific Steamships, Ltd., comprising employees aboard the D.E.V. *Beaverbrae* in the classifications of engineer officer, sanitary engineer, chief electrician and electrician. The chief engineer was excluded from the bargaining unit.

(3) Canadian Seamen's Union for a unit of employees of the Prescott and Ogdensburg Ferry Company, Limited, comprising the unlicensed personnel employed aboard the ss. *Joseph Dubrule* and ss. *Levis*.

Representation Votes Ordered

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and Canadian Pacific Railway Company, Montreal (L.G., Jan., 1949, p. 45). Following an investigation of the application and a public hearing, the Board ordered a representation vote among

the clerical employees in the General Office, Angus Shops Stores of the Canadian Pacific Railway Company, Montreal, Quebec, classified as clerk, stenographer, typist and office boy. (Returning Officer: R. Trepanier.)

Applications for Certification Rejected

(1) Canadian Navigators Federation and Transit Tankers and Terminals Limited, Montreal, Quebec (L.G., June, 1948, p. 575). Following an investigation of the application, a public hearing and a representation vote, the Board rejected the application, which covered deck officers and marine engineers, for the reason that it was not supported by a majority of the employees affected.

(2) Brotherhood of Railroad Trainmen, Local 1005, and National Harbours Board, Montreal, Quebec (L.G., Jan., 1949, p. 45). Following an investigation of the application, the Board rejected the application for the reason that the employees affected (yardmasters) were performing duties of a nature such as to exclude them from the coverage of the Act.

Requests for Reconsideration of Decision in Applications for Certification

The Board rejected the report of the Prescott and Ogdensburg Ferry Company, Limited, for reconsideration of decision to certify the Canadian Navigators Federation (L.G., Nov., 1948, p. 1239).

The Board rejected the request of S. H. Rich, Canadian Pacific Railway Coal Contractor, Vancouver, for reconsideration of decision to certify the Brotherhood of

Maintenance of Way Employees (L.G., Oct., 1948, p. 1101).

Applications for Certification Received During the Month of December, 1948

(1) Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees for prevailing rates employees (monthly and hourly rated) employed by the National Harbours Board on the harbour at Quebec, P.Q. (Investigating Officer: L. Pepin.)

(2) International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America Local 119, for freight line drivers employed by Biggar Brothers Freight Lines, Winnipeg, Manitoba. (Investigating Officer: R. H. Hooper.)

(3) The Association of Marine Employees for the licensed and unlicensed employees on board dredges, tugs and workboat of Canadian Dredge and Dock Company Limited, Toronto, Ontario. (Investigating Officer: H. Perkins.)

(4) Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees for clerical employees in the accounting offices at Montreal, Quebec and Edmonton, Alberta, of the Canadian Pacific Airlines, Montreal, Quebec. (Investigating Officer: R. Trepanier.)

(5) Canadian Seamen's Union for the unlicensed personnel on board the ss. *Foundation Lillian* and ss. *Foundation Josephine* of Foundation Maritime Limited, Halifax, Nova Scotia and Moran Towing and Transportation Company, New York, N.Y. (Investigating Officer: R. Trepanier.)

Conciliation and Other Proceedings Before the Minister of Labour

Appointment of Conciliation Officers

During December, 1948, the Minister of Labour appointed Conciliation Officers to deal with two disputes pursuant to the provisions of Section 16 of the Industrial Relations and Disputes Investigation Act. The parties involved in the disputes were:—

(1) General Longshoremen's Union, Local No. 273, International Longshoremen's Association, Saint John, N.B., applicant, and the Shipping Federation of Canada, Inc., respondent. (Conciliation Officer: H. R. Pettigrove.)

(2) National Catholic Brotherhood of Transport Employees of Quebec, Inc., Quebec, Que., applicant, and the Quebec

Railway, Light and Power Company, Quebec, Que., respondent. (Conciliation Officer: L. Pepin.)

Agreements Facilitated by Conciliation Officers

Reports under Section 27 of the Act were received from Conciliation Officers during December indicating the settlement of all matters at issue in three industrial disputes. The parties involved in the disputes were:—

(1) Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 279, applicant, and the Ottawa Transportation Commission, Ottawa, Ont., respondent. (Conciliation Officer: B. Wilson.)

(2) National Association of Marine Engineers of Canada, Inc., applicant, and the National Harbours Board, Port of Montreal, P.Q., respondent. (Conciliation Officer: R. Trepanier.)

(3) General Longshoremen's Union, Local No. 273, of the International Longshoremen's Association, applicant, and the Shipping Federation of Canada, Inc., on behalf of various shipping and stevedoring employers at Saint John, N.B., respondent. (Conciliation Officer: H. R. Pettigrove.)

Conciliation Boards Appointed

On December 1, 1948, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between Canadian National Steamships and Canadian Pacific Steamships, operators of deepsea passenger steamships, and the Canadian Seamen's Union (TLC), representing the unlicensed personnel employed by these companies. The Board was appointed following receipt of the report of Raoul Trepanier, Conciliation Officer (L.G., Nov., 1948, p. 1240). The personnel of the Board is as follows: the Honourable Mr. Justice J. O. Wilson, of the Supreme Court of British Columbia, Vancouver, Chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board; Theodore Meighen, K.C., Montreal, appointed on the nomination of the employers; and John Kerry, K.C., also of Montreal, appointed on the nomination of the union. It will be noted that the personnel of the Board appointed to deal with the passenger dispute is the same as that of the Board appointed to deal with the dispute between the union and the Canadian Deepsea Dry Cargo Shipping Companies (L.G., Jan., 1949, p. 52).

On December 13, 1948, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute

between the Temiscouata Railway Company and the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Railroad Trainmen. The Board was appointed following receipt of the report of Liguori Pepin, Conciliation Officer (L.G., Jan., 1949, p. 52). Constitution of the Board had not been completed at the end of the month.

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation appointed to deal with a dispute between the Prescott & Ogdensburg Ferry Company, Limited, and the Canadian Navigators' Federation (L.G., Jan., 1949, p. 52) was fully constituted on December 21, 1948, with the appointment of His Honour Judge F. W. Schwenger, of Hamilton, as Chairman of the Board. Judge Schwenger was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, N. L. Mathews, K.C., of Toronto, and G. M. Desaulniers, of Montreal, who had previously been appointed on the nomination of the company and the union, respectively.

Application for Consent to Prosecute

During the month, the Minister of Labour refused an application for consent to prosecute made under Section 46 of the Act by Mr. A. G. Anderson, a member of Lodge 477, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, against Mr. C. Day, a member of Division 66, Canadian Brotherhood of Railway Employees, and Other Transport Workers (L.G., Jan., 1949, p. 53). The application had alleged the violation of Sections 3, 4 (3) and 5 of the Act.

COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

Recent Collective Agreements

A file of collective agreements is maintained in the Research and Statistics Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec, are summarized in a separate article following this.

Logging

BRITISH COLUMBIA COASTAL REGION— CERTAIN LOGGING FIRMS AND INTER- NATIONAL WOODWORKERS OF AMERICA.

Agreements to be in effect from July 15, 1948, to July 15, 1949, and thereafter from year to year subject to 60 days' notice. The companies recognize the union as the sole collective bargaining agency for all eligible employees. *Check-off*: the companies agree to deduct union dues monthly and also initiation fees, back dues and assessments from the pay of employees who so authorize and to remit same to the union.

Hours of work shall be 8 per day and 40 per week, except cookhouse and bunkhouse employees in unorganized territory, fire-fighters, boatmen, first-aid attendants and watchmen (time worked by cookhouse and bunkhouse employees shall be computed on a daily basis and they shall be entitled to one day off in seven), provided the companies will have the right to operate 44 hours per week with time and one-half over 40 hours. *Overtime* at time and one-half will be paid for work in excess of 8 hours per day and 40 hours per week and for all work on 7 specified holidays.

Vacations with pay will be granted employees in accordance with the provisions of the annual holidays act of British Columbia. Cookhouse and bunkhouse employees in unorganized territory will receive one week's vacation with pay after 6 months' continuous service; provided that such employees shall not be entitled to more than 2 weeks' vacation with pay in any one year except as outlined below. All employees with 5 or more years' continuous service will receive an additional week's vacation with pay or pay in lieu thereof.

Wages: the present scale of wages to employees except contract workers, but including shingle sawyers and packers, fallers and buckers employed at hourly rates shall be increased by 13 cents per hour or 11 per cent whichever shall be the greater. Sawyers and packers, fallers and buckers employed as contract workers receive in-

Two unusual features in an agreement summarized this month are: a compulsory pension plan for employees from the age of 21 years and new employees, and three paid statutory holidays allowed to union members only. These provisions are included in an agreement between the Donnacona Paper Company, Limited and two unions: Le Syndicat National des Travailleurs de la Pulpe et du Papier de Donnacona Inc., and National Federation of Pulp and Paper Workers Inc.

creased piece rates. Train crews receive additional increases of 10 cents per hour for engineers and head brakemen and 5 cents per hour for all other train crew employees. The wage increase shall be retroactive to July 15, 1948, and shall apply to employees on their employers' payrolls on September 27, 1948. The wage scale may, subject to mutual consent of both parties, be revised once annually.

Night shift premium of 6 cents per hour will be paid for work on the second and third shift.

Provision is made for *seniority rights* and *grievance procedure*.

Manufacturing

Animal Foods

MONTREAL AND HULL, P.Q., PETERBOROUGH AND TORONTO, ONT., ST. BONIFACE, MANITOBA, EDMONTON, ALTA. AND VANCOUVER, B.C.—CANADA PACKERS' LTD. AND UNITED PACKINGHOUSE WORKERS OF AMERICA (LOCALS 357, 314, 210, 114, 216, 243 AND 162 RESPECTIVELY).

Agreement to be in effect from August 19, 1948, to August 1, 1950, and thereafter from year to year subject to notice. This agreement is similar to the ones previously in effect and summarized in the LABOUR GAZETTE for May, 1948, p. 483, December, 1946, p. 1770, with the following changes—The *maintenance of union membership* clause includes a two weeks period at the end of each year in which any employee may resign his union membership without affecting his employment. *Wages*: present rates shall be increased by 9.6 per cent effective from August 2, 1948. These rates are to remain in effect for the duration of the agreement provided however that the question of wages may be reopened during July, 1949, upon proper notice, by either party.

Manufacturing

Pulp, Paper and Paper Products

DONNACONA, P.Q.—DONNACONA PAPER COMPANY LIMITED AND LE SYNDICAT NATIONAL DES TRAVAILLEURS DE LA PULPE ET DU PAPIER DE DONNACONA INC. AND THE NATIONAL FEDERATION OF PULP AND PAPER WORKERS INC.

Agreement to be in effect from May 1, 1948, to April 30, 1949, and thereafter from year to year subject to 30 days' notice. The company recognizes the unions as the sole bargaining agents for its eligible employees.

Hours of work: for four workers 8 per shift, shifts to rotate in sequence weekly; for day workers 10 per day, except mechanical and electrical department maintenance crews who shall work 8 hours per day. **Overtime** for four workers at time and one-half for all time worked during shutdown period on Sundays and 4 mill holidays, and when working extra time as an extra man, or at another job than his regular one, or when replacing a man who is not his jobmate; for day workers, time and one-half for all time worked in excess of the above hours; for all employees, for work on Sundays, 4 mill holidays and during shutdown periods (day workers who work on a Sunday shall be entitled to take one day off in lieu of Sunday during the week). All employees (both tour and day) who are members of the union are granted three of the mill holidays with pay when not worked.

Vacation with pay: all employees shall be entitled to 1 or 2 weeks per year. No authorized or justified absence shall affect the right of an employee to his vacation, which must be taken in the year due. Hourly paid permanent employees continuously employed for 12 months who have worked at least 1,920 hours straight time during this period receive one week; every employee continuously employed for 5 years who has worked at least 1,920 hours during the 12 months preceding his vacation date shall receive 2 weeks.

Hourly wage rates for certain classes: these shall remain in effect during the period of the agreement, every employee governed by the agreement shall receive remuneration of not less than 91 cents per hour except sub-base employees who are entitled to a minimum of 71 cents per hour. The standard scale is as follows: Part 1, sub-base employees only 71, 76, 81 and 86 cents; Part 2, regular employees 91, 93, 95, 97, 99 cents, \$1.02, \$1.06, \$1.10, \$1.14, \$1.19, \$1.29 and \$1.40; Part 3, paper makers, supervisory, etc., \$1.47, \$1.58, \$1.69, \$1.80, \$1.91, \$2.02, \$2.13 and \$2.24. The standard wage rates for mechanics in the trades of machinists, millwrights, electricians, pipefitters, carpenters and painters range from 97 cents to \$1.29. For train crew the rates are, locomotive engineman \$1.29, yard conductor \$1.19, locomotive fireman \$1.10, brakeman \$1.02. For an apprentice in the mechanical and electrical trades the rates are first year 71 cents, second year 76 cents, third year 81 cents and fourth year 86 cents, after which he is entitled to class "E" mechanics rate of 97 cents.

Pension plan: employees from the age of 21 years and new employees are required to join the pension plan, as a condition of service.

Provision is made for *sickness benefits, seniority rights, grievance procedure and an apprenticeship plan.*

HULL, P.Q.—THE E. B. EDDY COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCALS 35 AND 243) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 50).

Agreement of May 1, 1946 (L.G., Jan., 1947, p. 45), was amended May 1, 1947, and again May 1, 1948, effective until April 30, 1949, and thereafter from year to year subject to notice. The amendment effective May 1, 1947, granted a general increase of 14 cents per hour. The amendment effective May 1, 1948, further increases wage rates 10 to 11 per cent and additional adjustments of from 1 to 30 cents per hour for some classes. **Hourly wage rates** for certain classes effective May 1, 1948, follow: specialty mills—machine tenders \$1.36 to \$1.46, back tenders \$1.14 to \$1.23, third hands 97 cents to \$1.07, fourth hands 92 to 95 cents, fifth hands 92 cents, plug rolls and labourers 88 cents, beater engineers \$1.14 to \$1.44, colour men \$1 to \$1.07, sizemen \$1, beaterman dumpers 99 cents, beaterman 97 cents, cuttermen 91 and 93 cents, rewinder operators 91 and 92 cents, trimmer operators 92 cents and \$1, broke hustlers 88 cents, female sorters 64 to 70 cents, female checkers 80 and 87 cents; newsprint mill—machine tenders \$2.10, back tenders \$1.90, third hands \$1.54, fourth hands \$1.19, fifth hands \$1.10, broke hustlers 95 cents, mixing room operators \$1.37, broke beatermen 92 cents, beatermen and labourers 88 cents, finishers 94 cents, oilers \$1.06, millwrights \$1.17; sulphite and woodroom—cooks \$1.02 and \$1.25, acid makers \$1.11, blow pits, screen men 94 cents, wet machine 91 and 93 cents, truckers 93 cents, others 88 to 99 cents.

Holiday shutdown period for Dominion Day is increased from 24 to 32 hours.

OTTAWA, ONT.—THE E. B. EDDY COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 34), THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 73) AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS.

The amendment effective May 1, 1947, granted a general increase of 14 cents per hour. The amendment effective May 1, 1948, further increases wage rates so that the hourly wage rates for certain classes are: board mill—machine tenders \$1.47, back tenders \$1.28, third hands \$1.17, fourth hands \$1.06, fifth hands 98 cents, colour men \$1.14, beatermen 97 cents, others 88 cents to \$1.06; electrical—electricians \$1.07 and \$1.12, helpers 93 cents, motor tenders 94 cents; groundwood—grindermen 93 cents, deckermen, woodhandlers, wet machine operators 90 cents, others 88 to 90 cents; mechanical—machinists, welders \$1.11 and \$1.17, helpers 93 and 94 cents, blacksmiths \$1.07, millwrights \$1.07 and \$1.12, pipefitters, carpenters \$1.04 and \$1.09, helpers 93 cents, painters 95 cents and \$1.01, oilers 94 cents; specialty paper finishing and shipping—males 88 cents to \$1.05, females 69

to 90 cents; specialty paper mills—machine tenders \$1.56 to \$1.63, back tenders \$1.38 to \$1.45, third hands \$1.22 to \$1.24, fourth hands \$1.03; fifth hands \$1 to \$1.02, engineers \$1.44, panel board operators \$1.02, colour men \$1.07, sizemen \$1, scalemen 99 cents, mixer men 92 cents, spare hands \$1 and \$1.25, others 88 to 99 cents; steam—firemen 93 cents to \$1.01, turbine operators 97 cents to \$1.10, others 88 to 93 cents; sulphite—cooks \$1.22, acid makers \$1.07, blow pits and digesters 98 cents, others 88 to 92 cents; technical—testers 95 cents to \$1.02; wood room 89 to 92 cents; woodyard—locomotive engineers \$1.11, brakemen, tractor operators 94 cents, sawyers 91 cents, oil men 88 to 91 cents; garage—truck drivers 94 cents; general labourers, watchmen 88 cents.

PETERBOROUGH, ONT.—CANADIAN NASHUA PAPER COMPANY LIMITED AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION OF NORTH AMERICA, LOCAL 520 (SPECIALTY PRINTING WORKERS)

Agreement to be in effect from June 30, 1948, to June 29, 1949, and thereafter unless 60 days' notice of intention to change or terminate shall be given by either party. The company recognizes the union as the sole and exclusive collective bargaining agent for all eligible employees. The company will encourage all eligible employees to become union members and maintain membership therein. *Check-off*: the company agrees to deduct union dues monthly during the term of the agreement from members who so authorize and to remit same to the union.

Hours of work: on one and two shift operations, 8-8 per day Monday through Friday, a 44-hour week on 3 shift operations—first shift 8 per day Monday through Saturday, second shift 8 per day Monday through Friday and 4 on Saturday, third shift 8 hours per day Monday through Friday. For engineers and watchmen the normal work week shall be 48 hours. For maintenance mechanics the normal work week shall be 44 hours. *Overtime* at time and one-half to apply for hours worked in excess of normal week of 44 hours on first shift in 3 shift operations and for all work in excess of normal hours up to 3 hours of overtime; double time thereafter and for all work on Sundays (except maintenance mechanics, engineers and watchmen), and on 8 statutory holidays which are *paid holidays* if they do not fall on a Saturday for employees who work full shifts immediately preceding and following the holiday. On Remembrance Day veterans of the two wars, who report for duty at the regular time, shall be allowed to leave for the ceremony at 9 a.m. If they return to work at 1 p.m. for the balance of the day they will be paid for a full day, otherwise they will be paid only for the time actually worked.

Vacation with pay: one week to all employees with one year of continuous service with the company, 2 weeks to employees with 5 or more years' continuous service. If a paid statutory holiday occurs during an employee's vacation, it will not be counted as part of his vacation, and the employee will receive an extra day's vacation with pay.

Hourly wage rates for certain classes: wax division—excluding lead hand, starting rates are 83 cents to \$1.06 and increase to 95 cents to \$1.495 after some months' experience;

gum division—starting rates are 83 cents to \$1 increasing to 95 cents to \$1.15; general—starting rate for males 83 to 86 cents, for females 67 cents, increasing to 92 cents to \$1.06 for males and 75 cents for females; shipping and receiving—starting rates 83 cents to \$1.05 increasing to 98 cents to \$1.33; maintenance—range by trades, machinist \$1.13 to \$1.38, machinist's helper 92 cents to \$1.04, electrical maintenance \$1.08 to \$1.31, carpenter 92 cents to \$1.09, engineer (third class) \$1.13. A *night shift differential* of 7½ cents per hour for work on both the afternoon and night shifts shall be paid. A *cost-of-living bonus* of 25 cents per point for each point rise over the June, 1948, index as reported by the Dominion Bureau of Statistics. Such payment shall not be made until the index advances a full 4 points, similarly if after having advanced 4 points the index must drop back 4 points before being discontinued.

Provision is made for *seniority rights and grievance procedure*.

Manufacturing

Wood Products

BRITISH COLUMBIA COAST REGION—CERTAIN FIRMS ENGAGED IN SAWMILLING, PLYWOOD, VENEER, CREOSOTING, BOX FACTORY, BASKET, LATHE MILL AND SHINGLE MILL OPERATIONS AND INTERNATIONAL WOODWORKERS OF AMERICA.

The agreements summarized above under "Logging" apply to certain companies engaged also in the above operations.

Manufacturing

Metal Products

MONTREAL, P.Q.—CANADAIR LIMITED AND INTERNATIONAL ASSOCIATION OF MACHINISTS, AIRCRAFT LODGE 712.

Agreement to be in effect from June 1, 1948, to May 31, 1949, and for a further period of one year unless notice is given by either party. The company recognizes the union as the sole collective bargaining agent for all eligible employees during the term of the agreement. Employees are entirely free to join the union or not as they see fit. There shall be no discrimination, coercion, restraint or influence either because of membership or non-membership in the union. *Check-off*: employees may have union dues deducted monthly from their pay by the company and remitted to the union. This authorization shall be irrevocable until 30 days before the anniversary date of the agreement, when it may be cancelled.

Hours of work: standard working week to be one of 45 hours. Standard working day to be established by the company. In the event that the entire plant, a division, a department or a departmental function of the plant is placed on a 3-shift operating schedule, the first and second shifts shall be of 8 hours and the third shift shall be of 6½ hours with a lunch period of a ¼ hour allowed on each shift. *Overtime*: time and one-half for work in excess of the standard working hours up to 12 hours in any one shift, double time thereafter and for any time worked on Sundays and 8 specified holidays. No work to be performed on Sundays except in cases of emergency.

Overtime shall not be paid for work on Sunday or holidays if the employee takes another day off in the same week except through illness or by permission.

Vacation with pay: one week per year after one year's service, as provided by provincial law; 2 weeks after 5 years' continuous service with the company with pay equal to 4 per cent of the wages an employee has earned during the preceding 12 months.

Wages: minimum hourly rates of pay for certain classes—journeymen tool and die makers, jig makers, pattern makers, \$1.15; machinists, electricians, joiners, sheetmetal workers, welders, painters, moulders, cable spicers, upholsterers, aircraft mechanic, \$1.04; production workers 73 and 88 cents; beginners, labourers 66 cents; miscellaneous light labour 60 cents; apprentices first 1,850 hours 49 cents increased by 11 cent raises to \$1.04 during sixth 1,850 hours. All employees working on shifts other than the regular day shift shall receive a premium of 5 cents per hour over their regular rate. In the event that the plant goes on a 3-shift operating schedule, it is agreed that all shifts shall be paid for the same number of hours per shift. Leading hands (any employee in charge of a group of 4 or more employees and responsible for their work) shall be paid at a rate of 5 cents per hour higher than his classification calls for, or than the rate of the highest-paid employee under him, whichever is higher.

Provision is made for *seniority rights, grievance procedure and an apprenticeship plan.*

ST. THOMAS, ONT.—THE WEATHERHEAD COMPANY OF CANADA, LTD., AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 1804.

Agreement to be in effect from April 30, 1948, to March 24, 1949, and thereafter from

year to year subject to notice. The company recognizes the union as the sole and exclusive collective bargaining agent for all eligible employees. There shall be no discrimination, interference, restraint or coercion by the company or the union because of membership or non-membership in the union. **Check-off:** the company will deduct union dues monthly from the pay of members who so authorize and remit same to the union.

Hours of work: five days Monday to Friday inclusive, a 45-hour week. A one-half hour lunch period will be allowed the *night shift* on company time. **Overtime:** time and one-half shall be paid for all time worked over 45 hours (except firemen, whose normal work week is 48 hours) in any one week, and for all work on Sundays and Victoria Day. Double time shall be paid for all time worked on 6 additional statutory holidays, which are *paid holidays* for employees with seniority who work the day before the holiday and the day after.

Vacation with pay: one week to employees with 1 to 5 years' continuous service with the company with a minimum of 250 days of actual work during the preceding year, 2 weeks to employees with 5 or more years' continuous service with a minimum of 250 days of actual work during the preceding year.

Wages: the existing individual and group bonus incentive system shall be continued. The existing schedule of job classifications and of rates applicable thereto, together with a cost-of-living bonus of 12 cents per straight time hour effective March 22, 1948, shall continue in effect during the term of the agreement, provided that anytime upon 30 days' notice after 6 months either party may re-open negotiations as to general wage rates.

Provision is made for *seniority rights and grievance procedure.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of 2 new agreements, the correction of another, and the amendment of 6 other agreements. These include the amendment of the agreements for barbers and hairdressers at St. Johns and Iberville and for building trades at Hull in the *Quebec Official Gazette* of December 18. The other Orders in Council are summarized below.

Requests for the amendment of the agreements for the uncorrugated paper box industry and for the men's and boys' clothing industry for the province and for building trades at Hull were gazetted November 27. A request for the amendment of the agreement for barbers and hairdressers at Sherbrooke was gazetted December 4. A request for the amendment of the agreement for hospital and charitable institution employees at St. Hyacinthe was published December 11. Requests for the amendment of the agreements for barbers and hairdressers and for printing

trades at Montreal, and for a new agreement for retail stores at St. Hyacinthe were published December 18.

Orders in Council were also published approving or amending the constitution and

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE*, monthly since June, 1934.

by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing

Printing and Publishing

PRINTING TRADES, QUEBEC.

An Order in Council, dated December 10, and gazetted December 18, makes obligatory the terms of a new agreement between "Le Syndicat patronal de l'Imprimerie de Québec, inc." and "Le Syndicat Catholique des Imprimeurs et Relieurs de Québec, inc.", "L'Union Typographique de Québec", Local 302, "L'Union des Pressiers et Clicheurs de Québec", Local 152, "L'Union des Relieurs", Local 152, Quebec, "Le Syndicat Catholique des Imprimeurs de Rimouski et Rivière-du-Loup", "Le Syndicat Catholique des Ouvriers Imprimeurs de la Beauce." Agreement to be in effect from October 15, 1948, to October 15, 1949, and thereafter from year to year, subject to notice. It is similar to the agreement previously in effect and summarized in the *LABOUR GAZETTE*, April, 1948, p. 332, with certain exceptions:—

Establishments governed by the agreement are divided into the same 5 classes as previously with the new provision that if during the existence of the present agreement a shop should be liable to change class because of new material, the employer operating the shop may, during the first 6 months of operation of this new material, increase his employees' wages by only half the difference between the former class and the new one, after which time the employees shall receive the regular wage rate of the actual class of the shop.

Hours are the same as those set by the previous agreement, with the exception that, in paper bag factories, only the aniline press department still works 48 hours per week, the other printing departments of these factories now being on a 45-hour week. The number of paid *statutory holidays* is increased from 5 to 6 in 1949, 7 in 1950, and 8 in 1951.

Minimum wage rates for journeymen are increased by 15 cents per hour for all classes. Journeymen on night shifts receive \$3 more per week than the regular rates established for day workers. Foremen receive \$5 more per week than journeymen in class "A", \$4 more in classes "B" and "C", and \$3 more in the other classes. Bookbinding female employees receive from \$12 per week in first 6 months to \$20 in second 6 months of fourth year.

Apprentices are paid the following minimum wage rates: class "A", from \$15 per week in first year to \$31 in second 6 months of fifth year; classes "B" and "C", from \$14 to \$30; classes "D" and "E", from \$14 to \$27. Apprentices on night shifts receive an additional \$2 per week.

Manufacturing

Metal Products

SHEET METAL MANUFACTURING, MONTREAL.

An Order in Council, dated November 12, and gazetted November 27, amends the previous Orders in Council for this industry (L.G., Aug., 1948, p. 871, Sept., p. 993) by

providing for a general increase of 5 cents per hour over the minimum wage rates previously paid to all employees except boys from 16 to 18, whose minimum starting rate remains at 51 cents per hour.

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL.

An Order in Council, dated December 10, and gazetted December 18, amends the previous Order in Council for this industry (L.G., May, 1948, p. 488) by increasing the minimum hourly wage rates as follows:—mechanic, erector from \$1.10 to \$1.17 per hour, fitter, blacksmith from 98 cents to \$1.04, helper (shop or field) from 85 to 90 cents.

Construction

BUILDING TRADES, MONTREAL.

An Order in Council, dated November 18, and gazetted November 27, amends the previous Orders in Council for this industry (L.G., Sept., 1948, p. 993, Nov., p. 1247; Jan., 1949, p. 67) by reducing the maximum hours of work for landscape workmen to 44 per week and by providing that the minimum wage rate for shovel operators shall be \$65.54 per week, even where the maximum weekly hours of work are restricted by law or agreement to 44 per week.

Another Order in Council, dated December 2, and gazetted December 11, amends the previous Orders in Council for this industry by increasing the minimum wage rates for employees in the elevator industry in the Montreal and Quebec regions by 10 cents per hour for mechanics and 7 cents per hour for helpers, so that the new minimum wage rates for mechanics are \$1.55 in the Montreal region and \$1.37 in the Quebec region, and for helpers \$1.09 in the Montreal region and 96 cents in the Quebec region; in the Hull region, minimum wage rates remain at \$1.39 per hour for mechanics and 97 cents for helpers.

BUILDING TRADES, HULL.

An Order in Council, dated November 25, and gazetted December 4, amends the previous Orders in Council for this industry (L.G., Feb., 1947, p. 186, Nov., p. 1662; April, 1948, p. 334, July, p. 741, Sept., p. 995, Nov., p. 1247, and previous issues) by increasing the minimum wage rate for painter in zone I from \$1.06 to \$1.10 per hour.

BUILDING TRADES, SHERBROOKE.

An Order in Council, dated December 2, and gazetted December 11, corrects the previous Orders in Council for this industry (L.G., Nov., 1947, p. 1661; Dec., 1948, p. 1421), by providing that the counties of Drummond and Arthabaska, as well as the towns of Drummondville, Victoriaville and Arthabaska, are no longer included in the territorial jurisdiction of this agreement.

Transportation and Public Utilities

Local and Highway Transport

TRUCK DRIVERS, QUEBEC.

An Order in Council, dated November 18, and gazetted November 27, makes obligatory the terms of a new agreement between "L'Association des Camionneurs de Québec" and "Le Syndicat catholique des Employés

du Camionnage inc." Agreement to be in effect from November 27, 1948, to December 31, 1948, and thereafter from year to year, subject to notice.

Territorial jurisdiction comprises the city of Quebec and the municipalities situated on the north shore of the St. Lawrence river and included, in whole or part, in a radius of 5 miles from the limits of Quebec City.

Professional jurisdiction comprises all employers of the cartage industry, with or without a permit from the Provincial Transportation and Communication Board, living, doing business or operating their concern within the territorial jurisdiction and all employees of the employers of the industry. It also includes (but only for the cartage services) all industrial and commercial employers and their employees not governed by another decree, or by a private collective labour agreement under the Labour Relations Act, who are living or doing business or operating their concern within the territorial jurisdiction, as well as the cartage services of establishments engaged in the sale and distribution of essential commodities like coal, oil, firewood, or similar products, except when governed by another decree. However, commission salesmen of industrial and commercial establishments governed by this decree other than cartage concerns and whose

trucking operations are but an accessory to their main salesman functions, and employees of industrial and commercial establishments governed by this decree other than cartage concerns who perform the trucking services of such commercial and industrial establishments when working less than 3 days per week at their professional occupations are not governed by this decree.

Hours: 9 per day, 54 per week.

Overtime is payable at time and one-half, double time on Sundays and 8 specified holidays.

Minimum wage rates: hourly rates—truck driver 60 cents per hour, helper or labourer 55 cents, float driver, rubber-wheel tractor driver or operator 65 cents; *weekly wages*—truck driver \$29, driver's helper or labourer \$27. Every hourly-paid employee reporting for work shall be entitled to 4 hours' pay at his regular hourly rate, when no work is found for him to do or when the work is done in less than 4 hours in the course of the day.

Vacation: one half-day with pay for each period of 25 days of work for the same employer. If an employee leaves his employer or is dismissed before his vacation, he shall receive a compensation equivalent to the vacation pay to which he is entitled.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded during November

(1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of November the Department of Labour prepared 69 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 95 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates."

(2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

| Department | No. of contracts | Aggregate amount |
|---|---------------------|---------------------|
| Canadian Commercial Corporation. | 5,453 | \$5,335,001.00 |
| Post Office. | 12 | 64,036.69 |
| R.C.M.P. | 2 | 39,260.00 |

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

LABOUR LAW

Recent Regulations Under Dominion and Provincial Legislation

Regulations have been made bringing into force in Ontario the provisions of Part I of the Dominion Industrial Relations and Disputes Investigation Act. ¶In Nova Scotia, the first regulations for the safe operation of Diesel engines in coal mines have been issued. ¶As a result of higher minimum rates fixed for workers in forest operations in Quebec the employer is no longer required to provide board and lodging free of charge. The maximum amount for such deduction from wages is now \$1.05 per day. ¶In Alberta, persons employed in saw mills and planing mills in rural districts are permitted to work longer hours from December 1, 1948, to March 31, 1949.

DOMINION

Veterans Rehabilitation Act

An amendment to the Veterans Rehabilitation Order governs the amount of compensation payable to a veteran who is injured while taking an approved course of vocational or technical training for which he is being paid an allowance by the Department of Veterans Affairs, and who is not eligible for compensation under the law of the province in which the accident occurred. Under the Veterans Rehabilitation Act, 1945 (Section 17B) such an injured veteran is classed as an employee of His Majesty for the purposes of the Government Employees' Compensation Act. He is deemed to receive a monthly wage from the Crown equal to the monthly allowance, including additional amounts paid for dependants, made him by the Department of Veterans Affairs.

As formerly, the compensation in the case of temporary total disability must not be less than \$12.50 a week, and in the case of temporary partial disability a proportionate amount.

Provision is now made for calculating the compensation payable in cases of permanent total or permanent partial disablement. The veteran shall be deemed to have been receiving at the time of the injury a monthly wage from His Majesty which is considered fair in comparison with the earnings of a fully qualified person engaged in the same occupation. The award, however, in the case of permanent total

disability, must not be less than \$100 a month nor more than the amount of pension and allowances payable by the Canadian Pension Commission calculated on the basis of the marital status and number of dependants of the trainee, had the disability been incurred during service and pensionable under the Pension Act. For permanent partial disability, the veteran is to be paid a proportionate sum.

This amendment was made on November 26, 1948 (P.C. 5456), gazetted December 22.

PROVINCIAL

Alberta Labour Act

Wages and Hours in Lumbering

Persons employed in saw mills and planing mills in rural districts more than 10 miles from a city or in places of less than 1,000 people are permitted, by an Order of November 22, gazetted November 30 (O.C. 1369/48), to work a maximum of 10 hours a day and 208 hours a month, from December 1, 1948, to March 31, 1949, instead of the statutory eight hours a day and 48 a week.

Time and one-half must be paid for all hours worked in excess of nine in a day and/or 208 in a month, whichever is the greater amount, rather than for the hours in excess of nine in a day or 48 in a week as provided by the Act and Male Minimum Wage Order No. 1 (1947) (L.G., 1947, p. 843).

A similar order for these workers together with workers employed by logging and railway-tie contractors was made in 1947 (L.G., 1948, p. 197).

British Columbia Hours of Work Act

Baking Industry

From December 30, working hours of persons employed in the baking industry as deliverymen may exceed the eight- and 44-hour limits laid down by the Act but only to the extent of four extra hours in a week, as a result of a new regulation (17C) made on December 15 and gazetted December 16. An earlier exemption (17B), now rescinded, in addition to setting a weekly limit of 48 hours for these workers restricted daily hours to 10 (L.G., 1947, p. 1817).

Bartenders

By an Order (No. 34A) made on November 25 and gazetted December 2, the hours within which bartenders, waiters and utility men may work on a split shift in premises licensed to sell beer have been extended to 13 immediately following commencement of work, instead of the 12-hour limit set by the Act. This temporary exception is effective to January 31, 1949.

British Columbia Male and Female Minimum Wage Acts

Road Transport

Exemptions from the application of the Order governing drivers, swamper or helpers employed in the transport of goods by motor vehicle of over 1,000 pounds have been extended to include drivers of vehicles used to transport passengers and to deliver non-alcoholic bottled beverages. As before, the Order does not apply to drivers in the laundry, cleaning and dyeing industries, and in milk, bread and mail delivery (L.G., Oct., 1948, p. 1135). The amending Order (No. 9A) was made on December 3 and gazetted December 9, coming into effect on the latter date.

Laundries

An amendment in the Order governing male and female employees in the laundry, cleaning and dyeing industries (L.G., 1946, p. 988) permits the Board of Industrial Relations to exempt these workers from the daily guarantee of not less than an amount equal to four hours' pay and three hours' pay on Saturday. The amending Order (No. 74A) of November 25 was gazetted and became effective on December 2.

British Columbia Shops Regulations and Weekly Holiday Act

By Orders in Council No. 1134 of May 25 and No. 2776 of December 3, gazetted December 9, hairdressing establishments in the City of Vancouver, except those connected with a department store, have been exempted from the weekly holiday provisions of the Act provided that they observe Monday in each week as a weekly holiday and remain closed on the hours fixed for closing by municipal by-law.

Nova Scotia Coal Mines Regulation Act

New regulations for the safe operation of Diesel locomotives in coal mines were approved by Order in Council on November 23, 1948, and gazetted December 1. These cover applications for permits, roadways, inflammable gas in the mine, equipment and maintenance, operation, and testing and fuel.

The Minister of Mines may grant a permit for the use of a Diesel locomotive in a coal mine, upon application of the mine manager giving specified information concerning the type of construction of the locomotive, the district of the mine in which it is to be operated, the quantity of air passing and the percentage of inflammable gas present.

The driver of a Diesel locomotive must be at least 21 and must be appointed in writing by the manager. With the exception of Inspectors or Deputy Inspectors, no one may ride on a locomotive without the manager's written permission. The manager must post notices and instruct drivers regarding maximum loads to be hauled and maximum speed of trains.

Roads must be examined at least once in 24 hours and a full written report sent to the manager. Other requirements deal with the track, overhead clearance and location of manholes.

Weekly tests to determine the quantity of air passing and the percentage of inflammable gas in the air in every road on which a Diesel locomotive is operated must be made by a competent person appointed by the manager for the purpose. Samples must be taken when the percentage is likely to be greatest and a written record sent to the manager and the Deputy Inspector within seven days. As long as the percentage exceeds 0.75, daily tests are required and for at least six working days thereafter. If the percentage exceeds 1.25, the official in charge of the district, the manager

and the Deputy Inspector must be notified and the use of the locomotive discontinued until inflammable gas present has been found not to exceed one per cent. Any such case must be reported to the Chief Inspector of Mines.

Every Diesel locomotive must be of an approved type and equipped with a flameproof trap for the exhaust, speed indicator, headlight, means for giving a warning signal and portable fire extinguisher.

At least every 24 hours an examination of all Diesel locomotives in use must be made by a competent person appointed in writing by the manager, and the flameproof trap fitted to the exhaust opening must be replaced by a clean trap. At least every seven days the locomotive and flameproof trap must be examined by a competent mechanic. Specified tests must be applied to the braking system at least once a week and also after repairs or adjustments have been made.

A copy of the section of the regulations setting forth the requirements regarding testing of exhaust gas and fuelling of locomotives must be posted at each filling station. Exhaust gas is to be analysed at least once a month and if more than five parts per thousand of carbon monoxide are found, the locomotive is to be deemed defective.

Ontario Labour Relations Act

Provision for applying the Dominion Industrial Relations and Disputes Investigation Act (L.G., Nov., 1948, p. 1255) to works, undertakings and businesses within the legislative jurisdiction of the Province of Ontario was made in the Labour Relations Act, 1948 (L.G., Aug., 1948, p. 888). Under this Act which was proclaimed in force on December 9, regulations have been made by the Lieutenant-Governor in Council which are substantially the same as Part I of the Dominion Act.

Excluded from the Ontario Act are farm workers, domestic servants, members of a police force or fire department and municipal corporations. Subject to these exceptions, the regulations, which were made on December 9 and gazetted December 18 (O. Reg. 279/48) are applicable to all employees whose relations with their employers are ordinarily within the exclusive legislative jurisdiction of the Ontario Legislature to regulate and to their employers.

By O. Reg. 280/48, approved on December 9 and gazetted December 18, rules of procedure are laid down for the Ontario Labour

Relations Board and the forms prescribed for certain proceedings under the Act.

Ontario Workmen's Compensation Act

Junk yards have been added to Schedule I of the Act, which enumerates the industries in which employers are liable to contribute to the Accident Fund. The section of the regulations excluding junk dealing from the operation of Part I has been revoked. These amendments made by O. Reg. 281/48 on December 3, gazetted December 18, came into force on January 1.

Quebec Minimum Wage Act

Higher minimum rates for different classes of woodsmen are established by Order in Council No. 1717 of December 16, gazetted December 24, amending Ordinance 39, 1942 (L.G., 1943, p. 268) which governs forest operations. In addition to a general increase, a change regarding the provision of board and lodging by the employer accounts for an over-all change in rates.

The employer is no longer required to supply board and lodging to the workers free of charge. If he does provide them, he may not deduct more than \$1.05 per day from an employee's wages, and he is forbidden to claim any rent for blankets. Previously, the minimum rates for all workers except pieceworkers included free board and lodging.

The new rates for cooks range from \$105 to \$145 per calendar month depending on the number in the camp, instead of from \$52 to \$80, as before. Cooks and chore-boys are to be paid \$80 instead of \$35.

For 26 days' work, a teamster is to receive \$110, with an additional \$35 if he uses his own team or \$16 for a single horse. The former rates were \$55 with an extra \$12.50 for each horse supplied. Stablemen have a minimum of \$110 rather than \$55. The \$60 rate for carpenters, blacksmiths, saw-filers, shotfirers, mechanics, truck and tractor drivers, engine and motor men is raised to \$115.

For workmen engaged in felling, making, handling or transporting pulpwood, the increase is from \$52 to \$105 and for those engaged in roadwork or camp construction from \$48 to \$100. For cutting firewood and charcoal wood, the new rate is \$85, and for cutting sawlogs, \$90. The old rates, with board and lodging, were \$37.50 and \$42.50. All these rates apply to a 26-day month.

Stream drivers must now receive \$525 a day instead of \$3; the minimum for sorters and dam guardians is \$105 instead of \$52 for 26 days' work.

Apprentices and incapacitated, which classes must not exceed 20 per cent of all employees, are entitled to \$85 for 26 days' work, instead of the former \$37.50 rate.

Rates established for piece-workers are, in most cases, 50 per cent higher than before. For cutting pulpwood, these decline from \$3 per cord for logs 4 feet to 6 feet long to \$1.65 per hundred cubic feet for wood cut in 16-foot lengths. For piece-workers cutting firewood, the rate per cord for wood 4 feet in length is \$3. For a pile 4 feet by 8 feet, the rate is \$2.25 for wood 3 feet long; \$1.80 for wood 2 feet long; and \$1.35 for wood 1½ feet in length. For

piece-workers cutting sawlogs, the rates range from \$3.30 to \$5 per 1,000 F.B.M. depending on the length of the logs.

If the employer so stipulates in the hiring contract, a worker who voluntarily leaves his work without adequate reason within 15 days after he begins work can claim neither travelling expenses nor board and lodging expenses en route but is entitled to receive the minimum of \$85 for 26 days' work. Formerly, this provision applied to workers who quit within 10 days.

The employer must, on request, post a copy of the Order in his employees' lodging quarters.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that the claimant was capable of and available for work and that the employment offered was not suitable. CU-B. 267 (June 26, 1947).

MATERIAL FACTS OF CASE:

The claimant, a married woman, aged 33 years, registered for work as a hairdresser, was last employed as such from June 23, 1946, to August 3, 1946. She worked on a percentage basis and earned between \$10 and \$35 a week. She became separated from her employment due to lack of work and on August 5, 1946, she made claim for benefit which was allowed.

On October 2, 1946, the claimant was notified of permanent employment as a counter clerk in a grocery store, eight hours a day, at a salary varying from \$10 to \$14 a week. She refused to apply for this employment, stating that she wished employment as a hairdresser with a good salary or in a store selling dresses and coats, not a store selling merchandise by the yard, because she did not know how to count.

The Insurance Officer disqualified the claimant for a period of six weeks as from October 3, 1946, under Section 40 (1) (a) of the Act, on the ground that she had without good cause refused to apply for a situation in suitable employment.

From this decision the claimant appealed to a Court of Referees which unanimously upheld the decision of the Insurance Officer.

The claimant then submitted a medical certificate dated November 23, 1946, to the effect that she could not do any heavy work and the Court of Referees was requested by the Insurance Officer to reconsider the case on the new evidence which had been submitted. The case was reheard by the Court which unanimously confirmed the disqualification for a period of six weeks as from October 3, 1946, their decision reading in part as follows:—

In order that new facts can change or modify a decision rendered, these facts must have existed at the time the claim was filed or at least on the date the decision was rendered.

The Insurance Officer requested the Court of Referees to reconsider its last decision on the ground that the medical certificate might have been somewhat vague and that, in fact, the claimant had undergone an operation in May, 1946, and could not attempt to do heavy work.

The Court of Referees reheard the case and confirmed their previous decision, stating:—

The Court is asked, for the second time, to reconsider its decision, stating that

they should accept that which was not declared in the medical certificate. That is to say, that the surgical operation, which is mentioned in the certificate, took place in the month of May, 1946, and that as the claimant had not completely recovered from the operation, she could not since that date, do any strenuous work.

It is to be noted however, that this was not declared by the claimant, and that it is up to her to give the necessary proof. It is to be noted further that had the claimant declared this at the time of filing her claim or request on appeal she would have been declared, very easily as being not available.

There is therefore, actually nothing that could be submitted to the Court which would justify a modification of their previous decision rendered.

The claimant requested the permission of the Chairman to appeal to the Umpire, submitting a new medical certificate reading as follows:—

This is to certify that since October 2, 1946, was unable to do any strenuous work such as clerk in a grocery store. She could accept work as clerk in a dry goods store or hairdresser which is her regular occupation.

and permission to appeal was granted on the following grounds:—

1. In order that it may be decided by the Umpire whether a claimant, who gives his reason for refusing employment as, physically incapable, should be declared not available.

2. In order that it may be decided by the Umpire whether a medical certificate, as the one produced by the claimant, be judged as a new fact and thereby justifying the revision or modification of the decision already rendered.

DECISION:

When the nature of a claimant's physical incapacity is such that there is no reasonable probability for him to obtain or perform any work, he must be considered as being not capable of nor available for work within the meaning of Section 27 (1) (b) of the Act.

The medical certificate which, in this case, was submitted to the Court of Referees, in order that they reconsider their first decision was not a new fact but was new evidence to substantiate the claimant's allegation in her appeal to the Court.

The two questions which were submitted are of a theoretical nature; yet a decision must have some practical bearing.

From the facts and submissions, I must conclude that the claimant, although unable to perform heavy work as a result of a surgical operation, is capable of and available for work of a light nature; that the employment offered was not suitable.

For these reasons the decision of the Court of Referees is reversed and the appeal of the claimant is allowed.

Held that the claimant was not capable of and available for work. CU-B. 338 (February 27, 1948).

MATERIAL FACTS OF CASE:

The claimant, a married man, aged 68 years, registered for employment as a grain checker, was last employed as such by a grain company from 1937 to July 1, 1947, at a salary of \$75 a month.

On October 28, 1947, he made claim for benefit, stating that he had been laid off because the business was being sold. The employer confirmed this statement, adding that the claimant had been paid a bonus of \$900 in June, 1947.

The employer also stated in a reply to a request for further information:—

You are perfectly correct in the second paragraph of your letter that we kept (the claimant) on our payroll, only as an act of more or less charity. He has been crippled up for quite a few years. . . . We really don't know what type of work (he) could possibly qualify for in his present physical condition; in fact, we would say, that he is in no condition to work.

The Insurance Officer referred the question of the claimant's entitlement to benefit to a Court of Referees under Section 55 of the Act.

The Court of Referees, by unanimous decision, disqualified him for an indefinite period under Section 27 (1) (b), on the ground that he was not capable of work.

The Chairman of the Court granted the claimant leave to appeal to the Umpire, permission being granted on the following grounds:—

1. This not being a six weeks' disqualification, but an indefinite disqualification, it is of the utmost importance that the bare possibility of error should be excluded; unless leave to appeal is granted, the issue cannot reach the Umpire for his final decision.

2. Whether there is sufficient or indeed any evidence to justify the finding made

by the Court of Referees, that the claimant, by reason of physical disability, is not available for work; there was no medical evidence, the claimant did not appear in person, and in reality the only evidence is the report of the local office as to the claimant's means of locomotion within the local office, supplemented by the inference to be drawn from the employer's statement as to the reasons for maintaining the claimant in employment up until the sale of the line of elevators.

3. The claimant, in his application for leave to appeal, says that his condition is as good as it was when he was employed by the elevator company. I believe that to be true. Is the Insurance Officer, under those circumstances, not estopped from saying that the claimant is not available for work when he accepted the claimant's contributions as an insured person who was working, and whose services were not terminated by reason of disability, but by reason of the sale of the line of elevators.

4. To what extent must a claimant be incapacitated in order to justify a finding of "not available"?

The claimant appealed to the Umpire on substantially the same grounds.

DECISION:

The question to decide is whether the claimant proved that he was capable of and available for work within the meaning of Section 27 (1) (b) of the Act.

In decision CU-B. 267 (see p. 187), I stated:—

When the nature of a claimant's physical incapacity is such that there is no reasonable probability to obtain or perform any work, he must be considered not capable of nor available for work

within the meaning of Section 27 (1) (b) of the Act.

In this instance, the claimant's physical condition is seriously impaired. Although he was employed under such disability, it is indicated in the employers' statement that "they kept him on their payroll only as an act of more or less charity", that "in fact, in their opinion, he was in no condition to work".

The claimant failed to support his contention that he "can satisfactorily do the work for which he made application" by any proof or medical evidence and the Court of Referees found unanimously that he was not capable of and available for work.

On the facts before me, whilst the claimant is deserving every sympathy and consideration, I have no other alternative than to uphold the disqualification imposed by the Court of Referees which is in accordance with the intents and provisions of the Act.

The Chairman of the Court of Referees raised the following question:—

Is the Insurance Officer not stopped from saying that the claimant is not available for work when he accepted the claimant's contributions as an insured person who was working, and whose services were not terminated by reason of disability, but by reason of the sale of the line of elevators?

The answer is no, since the Insurance Officer has the opportunity and the duty to test the capability of an insured person, not during his period of employment, but only after he has filed a claim for benefit, when all the requirements of the Unemployment Insurance Act must be complied with.

The appeal is dismissed.

Unemployment Insurance Statistics November, 1948*

Reports issued by the Dominion Bureau of Statistics state that during November, 1948, 73,119 claims for Unemployment Insurance benefit were filed in local offices of the Unemployment Insurance Commission, compared with 43,620 in October and 47,372 during November, 1947. These totals include revised claims (numbering 6,693 in November, 5,516 in October and 4,987 in November, 1947) which are reconsiderations, for any reason, of existing claims. Thus,

initial and renewal claims, representing mainly new cases of recorded unemployment among insured persons, totalled 66,426 in November, 1948, 38,104 in October and 42,385 in November, 1947. Increases in the number of claims of all types in November as against October were reported in all provinces.

Ordinary claims on the live unemployment register at November 30, 1948, totalled 83,710 (62,806 male and 20,904 female) compared with 55,384 (36,881 male and 18,503 female) at October 31, and

* See Tables E-1 to E-7.

59,555 (42,756 male and 16,799 female) on November 30, 1947. As in the case of the number of claims filed, the number of ordinary live claims on the register in each province was greater at the end of November than at the end of October. Ordinary claims are those filed by persons who have separated from their former employment either permanently or on the basis of a temporary layoff. In addition there were 4,143 (3,264 male and 879 female) "other claims" on the live unemployment register at November 30 compared with 4,460 (3,487 male and 973 female) at October 31 and 2,913 (2,025 male and 888 female) on November 30, 1947. These claims are filed largely by those who have been put on short-time at their places of employment.

Those on the live register at November 30, 1948, are also classified according to the number of days they have been continuously on the register since the last initial or renewal claim was filed. In arriving at the number of days in each case, an initial claim that immediately follows the termination of a benefit year is ignored and non-working days such as Sundays are not counted. Short periods of casual employment, generally being of less than one week's duration, which do not result in filing a renewal claim are not considered as breaking the period on the register, while the days so employed are not counted as days on the register. (Table E-6.)

A total of 63,408 claims was disposed of during November, 1948, including 342 special requests not granted (that is requests for ante-dating, extension of the two-year period and dependency rate of benefit) and 793 claims referred to courts of referees for further consideration. Of the remaining 62,273 claims, 48,774 were considered entitled to benefit and 13,499 not entitled to benefit.

Chief reasons given by insurance officers for considering claimants not entitled to benefit were: "insufficient contributions while in insurable employment" 5,564 cases, "voluntarily left employment without just cause" 3,745 cases, "refused an offer of work

or neglected an opportunity to work" 1,162 cases, "not capable of and not available for work" 608 cases, "not unemployed" 558 cases.

During November, 1948, 64,960 persons received one or more benefit payments amounting to \$2,283,383 for 1,106,864 compensated days compared with 50,454 beneficiaries who were paid \$1,763,559 for 878,430 compensated unemployed days in October and 45,106 beneficiaries paid \$1,555,397 for 813,780 compensated unemployed days during November, 1947. Thus, the average duration of the unemployment compensated was 17.0 in November, 17.4 days in October and 18.0 days during November, 1947. The average amount of benefit paid per beneficiary was \$35.15 in November, \$34.95 in October and \$34.48 in November, 1947. The average amount of benefit paid per compensated day of unemployment was \$2.06 in November, \$2.01 in October and \$1.91 in November, 1947.

It should be noted in connection with the data on benefit payments that an amendment to the Unemployment Insurance Act, effective October 4, 1948, increased the daily rate of benefit for those having a dependent. The per cent increases are not uniform throughout the range of benefit rates, ranging from nothing at the lowest rate to about 8 per cent on the highest rate. At the same time a new contribution class was added for those earning \$34 or more a week with a higher contribution rate and correspondingly higher benefit. The full effect of this change will not, however, be apparent until May, 1949.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending November 30, 1948, showed 3,496,037 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1948, an increase of 72,567 since October 30, 1948.

As at November 30, 1948, 211,054 employers were registered representing an increase of 647 since October 30, 1948.

WAGES, HOURS AND WORKING CONDITIONS IN THE PRODUCTION AND DISTRIBUTION OF ELECTRIC CURRENT, OCTOBER 1947*

Most of the 22,800 wage-earners employed in the electric current production and distribution systems whose returns were analysed in this article worked eight hours per day, six days per week. About one-half of the wage-earners were covered by some form of collective agreement. Rates reported for overtime work providing premium pay were time and one-half, double time and double time and one-half. More than one-half the workers were in units which reported a paid vacation of two weeks after a year of service and 45 per cent received pay for nine observed statutory holidays.

The index of wage rates in the industry was 54.8 per cent higher in 1947 than in 1939 and 7.9 per cent higher than in 1946. On a percentage basis, annual gains were fairly uniform except for the 1940 increase and smaller increases in 1944 and 1945, which were the years of more rigid controls. The table below shows the index for the group based on rates in 1939 as 100, with the annual percentage increase in each year.

| Year | Index | Annual Percentage Increase |
|-----------|-------|----------------------------------|
| 1939..... | 100.0 | — |
| 1940..... | 103.3 | 3.3 |
| 1941..... | 112.0 | 8.4 |
| 1942..... | 120.2 | 7.3 |
| 1943..... | 129.6 | 7.8 |
| 1944..... | 132.5 | 2.2 |
| 1945..... | 134.4 | 1.4 |
| 1946..... | 143.5 | 6.8 |
| 1947..... | 154.8 | 7.9 |

*The information in this article was prepared from data obtained in the general annual survey of wage rates and hours of labour for 1947, made by the Research and Statistics Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, their straight-time wage or salary rates or the average straight-time earnings of employees on piecework during the last pay period preceding October 1, 1947.

Information on wage rates in 1947 was published in the Department's Report No. 30, "Wage Rates and Hours of Labour in Canada, 1947". A few industries have been analysed each month in the *LABOUR GAZETTE* since June 1948 with respect to both rates and working conditions in 1947; comparable data for 1946 on a number of other industries have been published monthly from July 1947 in the *LABOUR GAZETTE*.

In the Department's annual report on "Wage Rates and Hours of Labour in Canada, 1947", a table on page 69 shows average hourly wage rates as well as predominant ranges of rates, by province, for six selected occupations in the industry. Increases in 1947 over 1946 in the Canada average rates in these occupations ranged from three cents per hour for linemen to ten cents for electricians. Except in the case of meter readers, average rates were highest in British Columbia.

This analysis covers information from both public and privately-owned systems. One hundred and seventy-nine returns were used, each applying to a "unit" of the industry engaged in either production or distribution of power, or both, in different general areas or specific localities. In several cases, a number of units are owned and operated by one system within a province.

Table I indicates the distribution of employees and units of the industry by province or region across Canada which are covered in this analysis. Eighty per cent of the workers were employed in Quebec and Ontario.

Of the 179 units, 107 employed less than 50 workers each, accounting for 10 per cent of the total number of workers, and 15 units, employing over 500 workers each, included 63 per cent of the total number of workers.

Collective Agreements.—Ninety-nine of the units reported 11,600 workers under union agreements or agreements with employee associations. Forty of the units and 6,700 workers were covered by agreements with associations of employees.

Eleven national or international unions represented the employees covered by union agreements. Thirty-four units reported agreements with the International Brotherhood of Electrical Workers (AFL-TLC), affecting 2,800 workers; three units reported agreements with the National Organization of Civic, Utility and Electrical Workers (CCL), covering 800 workers, and One Big Union was reported by four units, affecting 200 workers. Another three units reported 250 workers affected by agreements with directly chartered locals of the Canadian and Catholic Confederation of Labour and the remaining seven unions were each reported by one unit only.

Standard Hours of Work, Tables II and III.—Weekly hours ranged between 40 and 60 with only one unit employing 13 workers

on the 60-hour schedule. Of the 179 units whose returns were analysed, 103 reported a 48-hour week, including three-quarters of the workers. Although one-third of the units were on a 44-hour week, they employed only 17 per cent of the workers.

All but seven of the units worked a six-day week and these seven, on a 40-hour week, employed six per cent of the workers. On the basis of a six-day week, 100 of the units and 71 per cent of the employees worked a full day of eight to ten hours on Saturday and the remaining units reported working four to five hours.

Overtime Rates of Pay, Table IV.—

Most of the workers were in units reporting a payment of time and one-half during the work week, either after daily or weekly

hours had been worked; a few reported a rate of double time after daily hours.

Although more units reported time and one-half for overtime on Sunday, there were considerably more workers in units paying double time. Two units paid double time and one-half.

A rate of time and one-half, double time or double time and one-half for overtime on observed statutory holidays was reported by 132 units. They included 86 per cent of the total employment covered and 30 per cent of all the workers were on double time and one-half.

In the case of 13 units included under a straight time rate for all but holiday overtime in Table IV, the rate refers to workers other than maintenance crews who are paid time and one-half. One of these units reported that double time was paid after the first four hours of overtime.

Under the time and one-half rate, 13 of the units reported double time after the first four to eleven hours of overtime; two

paid double time after 10 p.m., one of these paying this same rate after 5 p.m. on Saturday. Another three units reported double time for overtime after midnight.

Vacations with Pay, Table V.—Although more units reported an initial vacation of one week, there were more workers in units giving two weeks, usually after one year of service.

Similarly, although more units reported a maximum vacation of two weeks, there were more workers in those units with a maximum vacation of three weeks, but this was usually after a service of 10 to 25 years.

Statutory Holidays, Table VI.—The great majority of units reported paying for two or more observed statutory holidays and two-thirds of the workers were in units who paid for seven to twelve holidays. There were about 4,000 workers in the units either observing no statutory holidays or observing between four and eleven but paying for none.

TABLE VI.—STATUTORY HOLIDAYS FOR WORKERS IN THE ELECTRIC CURRENT PRODUCTION AND DISTRIBUTION INDUSTRY, 1947

NOTE.—Six units, employing 224 workers, observed no statutory holidays.

An analysis of the current employment situation prepared by the Research and Statistics Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

CURRENT EMPLOYMENT CONDITIONS

Exceptional employment records were attained during 1948. Employment and wages both showed large and steady gains during the year. Seasonal influences had brought about the usual surplus of unskilled workers during December, particularly in British Columbia and Quebec. The supply of tradesmen, however, still fell short of demand in many occupations. On the whole, the employment situation indicated a fairly even balance between workers and jobs by the end of 1948.

The month of December, 1948, closed a very favourable year in the field of Canadian employment. The labour force over the year had expanded by some 100,000 persons. Continued buoyancy in the economy and the necessary degree of labour mobility had kept unemployment, other than seasonal, at a very low level. Long-standing shortages of workers in mining and agriculture had been greatly eased by immigration. Wages, too, showed steady improvement, especially during the last quarter of the year.

Of particular interest was the fact that these wage boosts were largely brought about by peaceful labour-management negotiations. Time lost through strikes in 1948 was only one-third that of the previous year.

Employment during December, however, was affected by usual seasonal influences. Agriculture, construction, and transportation had released many of their workers for the winter months. On the other hand, logging, which formerly had provided jobs for many of these workers, was operating at a much lower level and employment accordingly had declined. The net result was that a surplus of unskilled workers was developing. The extent of the surplus varied with the climatic conditions of the region, with British Columbia, Quebec, and the Prairies particularly affected. Other classes of workers, especially clerical, who were seeking jobs at this time were also faced with somewhat stiffer competition. Generally, however, tradesmen and fully-qualified workers were able to obtain jobs without serious difficulty. In the industrial field, employers were still recruiting abroad for skilled workers.

A better balance now appears to exist between the demand for and the supply of labour. Very few large pockets of labour shortage currently prevail while labour surpluses are largely temporary and proportionately small. This return to normalcy is reflected in many current developments in the employment market. Among these is the decided drop in labour turnover, the greater selectivity in employers' hiring, and the tendency for more job-seekers to use the facilities of the Employment Service and to claim unemployment insurance.

Agriculture

Farming operations were seasonally slack during December and any demand for help which did arise was quickly met. A few orders remained on file at employment offices but low wages deterred placements. Farmers were now waiting until the spring months to take on additional help, with many expecting to hire immigrants slated to arrive in 1949.

During the early part of December, the Dominion-Provincial Farm Labour Conference met in Ottawa to discuss agricultural labour plans for the 1949 season. Generally, the Conference agreed it will be necessary to supplement the farm labour force by a continuation of the present policies of immigration and by the direction of available local labour supplies into the industry during the harvest period. The principal groups of farm immigrants will be much the same as in 1948. Dutch farmers and Displaced Persons will enter under organized programs; immigrants from Great Britain will come independently. The Conference felt that immigration had been the

vital factor in easing the acute shortage of help which developed in Ontario early in the year.

Non-Agricultural Industry

The peak records attained in industrial production during 1948 demonstrated the high level of activity in the Canadian

economy. The expansion in industrial production had gained momentum as the year advanced. By the month of October, the volume was running four per cent above that of 1947. The preliminary index at that time stood at 187·4 (base 1935-39=100). General industrial peace was an important factor in the high production level maintained this year.

EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES, 1939 TO 1948

Average: 1939=100

Seasonally Adjusted

Industrial employment was still on the uptrend during October although the rate of increase had levelled off considerably. The index of employment in the eight leading industries stood at 203.5 (base 1926=100) at November 1, as compared with 203.3 and 197.8 one month and one year before, respectively.

The levelling off of the rise in the cost of living and continued wage increases had considerably improved the level of real wages in the manufacturing industry. At the beginning of November, the index of real wages for this industry stood at 105.5 (av. 1946=100).

Most of the **logging** camps in Eastern Canada had finished their year's cut by the end of December; last year, cutting continued until late January or early February. Hauling had begun in some areas while other companies were waiting for sufficient snow to begin skidding operations. Very few job openings, and a low turnover of labour were reported during December. Labour demand during the month was readily met with surpluses of men appearing in some areas.

In British Columbia, a number of factors combined to produce a low level of logging activity during the month of December. The effect of the seasonal decline, normal in this month, was accentuated by poor weather conditions. Heavy snows and low temperatures prevented work, especially in smaller camps. Many operators closed for the Christmas holiday season and will not re-open until spring. Uncertain market conditions were also a restraining factor on employment.

The post-war labour shortage in the **mining** industry appeared to be over by the end of 1948. Most mines, both coal and metallic ore, reported adequate staffs. A few mines could still use more men and experienced miners were usually taken on readily, but the labour supply was regarded as the most satisfactory for some years. Several factors contributed to this improved situation; first, a slackening demand in other industries, particularly logging, had made more workers available for mining; second, with a number of strip and placer mines closed down during December, these workers were seeking other jobs; third, labour turnover was sharply reduced.

Employment in mining as a whole during 1948 was estimated to be five per cent higher than in the previous year. During the first ten months of the year, production of all leading minerals except lead was above the 1947 level. A preliminary esti-

mate of the value of mineral production in Canada in 1948 placed the figure at \$806.2 million, an all-time record.

Hiring activity was slow in the **manufacturing** industries during December although a number of Ontario firms re-hired staff because of improved power supplies. Regular seasonal lay-offs took place in meat-packing plants and other food processing firms. Some plants were closed for re-tooling and overhauling of machinery but will open early in the new year.

Steel shortages continued to prevent employment expansion in numerous industries and in some cases caused temporary lay-offs. Nevertheless, materials in general were in better supply than at this time last year.

Employment in manufacturing during the year continued its post-war expansion. The labour force in the industry reached a peak of 1,300,000, or an estimated 3 per cent above the 1947 level. Earnings increased correspondingly over the year. At the beginning of November, average weekly earnings in manufacturing were about \$43 as compared with \$39 at the beginning of 1948. Wage increases were granted with relatively little strike action. The largest single strike during the year, in the auto parts manufacturing plant in St. Catharines, involved 2,500 workers and lasted for three and one-half months.

When winter weather arrived in December, **construction** began its seasonal downtrend. Many rough carpenters and outside labourers were released but inside workers will be employed throughout the winter. However, despite the high degree of winter activity, the seasonal lull was expected to throw a larger than usual number temporarily out of work. This was because of the exceptionally high level of employment attained this year; at the beginning of September, approximately 40,000 more workers were employed than in 1947. The outlook for the industry for the coming year continues bright.

With **trade** establishments at the height of seasonal activity during December, many persons secured temporary sales jobs. Labour demand seemed fairly well balanced with the supply of workers. Students again were the chief source of labour. Most of the extra workers were laid off directly after Christmas although some were retained for inventory work.

The dollar value of pre-Christmas sales in department stores was well above last year's level in all regions where information

was available. The Maritime region particularly showed a distinct improvement over the year. Although much of the general advance represented increases in prices, it would appear that a larger volume of goods was being sold in the department stores this year.

In many of the **service** establishments, labour supply was nearing demand during the month of December. The industry was also benefiting from reduced labour turnover, especially in restaurants, hotels, and laundries. Strong labour requirements, however, persisted in the domestic service group with orders at employment offices even larger than at this time last year. This situation developed despite the absorption of 7,000 girls and 250 married couples from Displaced Persons camps. Considerable dormant demand has been awakened by the promise of further immigration into this field. Casual day workers for household employment have been in better supply; many localities report requirements can be filled now with relatively little difficulty.

The service industry stands second only to manufacturing in the number of jobs provided for Canadian non-agricultural workers. At the beginning of September, employment in the service industry totalled 828,000. The composition of the working force within the industry was as follows: personal service, 284,000 (34%); government service, 251,000 (30%); community and public service, 213,000 (26%); business service, 51,000 (6%); and recreational service, 29,000 (4%).

Employment Service Activities

A heavier than usual registration of applicants took place during December, a month which previously has been one of the quietest at employment offices. As a result, unplaced applicants totalled 187,000 at the end of December, an increase of 45,000 over last year. The yearly increase was partially due to the greater number of jobless workers, particularly in logging and construction. Fewer winter jobs had been provided in the logging industry this year. Also, construction having employed 40,000 additional workers in 1948 necessarily threw many more workers into the labour market during the off-season.

However, there were several other factors which perhaps contributed more to the substantial rise in unplaced applicants over the year. Many persons were registering at employment offices immediately upon cessation of employment because of the

high living costs; formerly they had found jobs on their own during December or postponed job-hunting until the new year. Moreover, with eligibility widened for unemployment insurance and more job-seekers acquainted with the provision for a period of "waiting days", many were filing claims for benefits and registering for employment without delay. It would appear that generally more persons were using the facilities of the Employment Service than in former years.

Placement activity had fallen off appreciably during the month. Registrations continued to be predominantly in the unskilled field or among partially qualified workers. The majority of these persons had been released from the seasonally-inactive industries where demand was now negligible. Even in logging, where activity was at its yearly peak, requirements were small. This temporary lull, however, would begin to break by early March. In the women's field, more jobs were available during December with the upswing in Christmas trade; a considerable number of women workers who had been on file for some time were placed in the temporary openings.

Demand for skilled men in various occupations persisted through the seasonal decline. A number of orders were still in clearance since no local workers were available; in some instances, orders were being circulated as far as Great Britain.

Claims for unemployment insurance continued to increase. At the end of November, there were 84,000 ordinary claimants signing the unemployment insurance register. During the month, 65,000 persons had received one or more benefits, the average duration of the payment being 17 days while the average amount paid each beneficiary totalled \$35.15.

Regional Analysis

In the **Maritime** region, the seasonal decline in employment continued during December but conditions still compared favourably with those of last year. The usual quota of seasonal workers had not been absorbed in the logging industry this year because of the weak market for lumber. Nevertheless, improved employment conditions elsewhere had eased the situation, and applications at employment offices had not increased noticeably over the year.

Construction activity held up remarkably well throughout the region owing to unusually mild weather during December. Since many contractors had arranged for a large volume of inside work to be done during

the winter, employment had been maintained for skilled men. Indeed, in Halifax, some difficulty had arisen in filling the demand for such workers.

Waterfront employment was expanding rapidly with the start of what promised to be a good winter season. Halifax longshoremen obtained a new agreement granting a wage boost of 13 cents per hour. With the closing of the port of Montreal, all cargoes would be shipped through Halifax and Saint John for the remainder of the winter. Shipbuilding employment continued steady. The Halifax yards were busy with an Argentine contract; other contracts were on hand to sustain employment when this order was completed.

Employment conditions in the *Quebec* region were reaching their seasonal low by the end of December. The smaller logging cut this year had materially affected the current employment situation and applications at employment offices were substantially higher than one year before. Despite this, total employment had shown a gain over the year. The labour force had expanded appreciably in the Quebec region during 1948. All main industry groups particularly textiles, trade, and mining, had taken on additional workers.

Woods operations had passed their seasonal peak by the holiday period and cutting had been completed in most camps. It was expected that the current logging season would be the shortest in recent years. The demand for Canadian woodsmen for United States camps was about 2,000 less than in 1947. Ample labour was available to meet demand.

A number of manufacturing plants took advantage of the holiday season to suspend operations, either for annual vacations or for adjusting production schedules and overhauling machinery. Many of the workers who were thus temporarily released had registered for jobs at the Employment Service. Textile mills and furniture factories were operating at capacity and expansion was anticipated shortly in the electrical goods industry. Shortages of raw materials affected the output of heavy industries, although production was at or near capacity.

In keeping with the general trend, the *Ontario* region saw a further deterioration in the seasonal segment of employment during December. Nevertheless, mild weather had mitigated the downtrend in construction employment and a large amount of building was still underway. The hydro power cut-offs ended during the

month and no further restrictions were expected during the winter. Factory workers were recalled to their jobs where lay-offs had been in effect, but irregular work-shifts continued as a power-saving device.

Temporary lay-offs for inventory and other seasonal reasons occurred in all sections of the region. There were 3,000 auto workers laid off in Oshawa and 1,500 in Windsor, in addition to smaller lay-offs in other plants. In most cases, employment was expected to be resumed in January or February. The export market had weakened for a number of industries, such as automobile parts and flour milling, but employment had not been greatly affected. In contrast, the outlook was bright for heavy iron industries; in the furniture and paper industries, expansion was being planned for 1949.

Base metal mining was in a very favourable position by the end of the year. Rising world demand, higher prices, and the expectation of continued government stockpiling during the coming year made the outlook bright. The mines were well staffed and labour turnover had been greatly reduced.

In the *Prairie* region, winter employment conditions were fully in force by the end of December and seasonal unemployment had begun to develop. Nevertheless, the region had experienced the highest level of employment in its history during the summer, and unemployment still was proportionately low. The increase during December was the normal result of year-end lay-offs in industries such as trade, meat-packing, and construction. Because of the large overall expansion in construction employment this year, a proportionately large number had been displaced in the off-season. Lower logging activity, at the same time, had lessened the number of winter jobs available.

Seasonal lay-offs in packing plants had started, affecting many married women and farmers who had been hired at peak activity. Uncertainties in both market conditions and the supply of livestock had made the employment future difficult to discern.

Building activity continued during December and tradesmen generally were fully employed. Shortages of structural steel affected work on several projects. However, a busy year for construction is forecast for 1949. All production schedules were being maintained in the logging industry and labour turnover was extremely low. Employment in coal mining was high

despite the strike in the Edmonton and Estevan areas. Shortages of box cars, however, had resulted in some lay-offs.

In the **Pacific** region, the seasonal nature of the main industries always poses a problem at this time. Despite the fact that general employment had expanded appreciably during the year, by December conditions were not favourable. Heavy snowfalls throughout the region seriously affected all types of outside employment. Also, with the rapidly growing population it was very difficult to find jobs for all those currently looking for work.

The tremendous expansion in logging employment which has taken place during recent years now appears to be levelling off. Many of the smaller operators were beginning to retire from the field. Declining export markets, heavy log inventories,

lessening demand for lower grade logs, and the severe, though temporary, drop in the cedar shingle market were contributing factors in the current trend. Deep snow conditions during December forced early closure of many camps, a large number of which will not re-open for several months.

The construction industry ended its most successful year to date with a volume of work amounting to about \$85 million. The work was spread over most of the region, and about 70 per cent more was completed than in 1947. The prospects for 1949 appeared very good and estimates placed the 1949 volume at over \$100 million. Many large concerns, among which were pulp and paper plants and base metal mines, had announced extensive building programs for the coming year. These will provide for a further expansion in employment.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index fell from 159.6 to 158.9 between November 1 and December 1, 1948. All group indexes except that for foods were either fractionally higher or unchanged, but an unusually sharp decrease occurred in the price of eggs and there were moderate reductions among meats, vegetables and fruits. This was the first decline of any consequence in the cost-of-living index since September, 1945. The food index dropped from 204.7 to 202.0 between November 1 and December 1. The rent index advanced from 121.0 to 121.7, representing the net change between September and December. During November, fuel and light moved from 129.0 to 129.1, and home furnishings and services from 166.0 to 166.2. The two other budget group indexes remained unchanged, clothing at 181.5 and miscellaneous items at 124.6.

From August, 1939 to December 1, 1948, the increase in the cost-of-living index was 57.6 per cent.

Cost of Living in Eight Cities

Cost-of-living indexes for the eight regional cities all registered recessions between November 1 and December 1, 1948. Substantial declines in egg prices along with lesser reductions in meats, vegetables and fruits were almost entirely responsible for this movement. Budget groups other than

foods recorded relatively minor changes during the month under review. Composite index declines between November 1 and December 1, 1948, were as follows: Halifax 1.2 to 150.8; Saint John 0.7 to 155.5; Montreal 1.0 to 161.5; Toronto 0.7 to 154.5; Winnipeg 0.8 to 152.2; Saskatoon 0.7 to 161.6; Edmonton 0.6 to 153.6 and Vancouver 0.3 to 160.8.

Wholesale Prices, November, 1948

The general index of wholesale prices rose 0.5 points to 159.7 (base 1926=100) between October and November, 1948, although several component group indexes declined. Non-ferrous metals rose 4.3 points to 164.2 supported by further increases in lead, zinc, solder and antimony which overbalanced weakness in silver. An increase of 0.9 to 139.9 in vegetable products reflected a firmer tone for oats, barley, flue-cured tobacco, oranges and lemons. These outweighed declines in corn meal, potatoes and soybean oil. Higher prices for pig iron, steel billets and cast iron pipe advanced the iron products group 0.8 to 166.1 while an increase of the same amount in the chemical products group brought the index to 127.0. This movement reflected strength in red and white lead and fertilizer material prices. The textile group increased 0.7 to 161.4 due to firmer quotations for raw wool, wool blankets and woollen cloth. Declines were registered by three groups. Animal products fell 1.0 to

* See Tables F-1 to F-6.

COST OF LIVING AND WHOLESALE PRICES IN CANADA FROM JANUARY 1914 TO DATE

(Base 1935-39=100)

176.5 when recessions in fresh and prepared meats and eggs overbalanced strength in hides. Non-metallic minerals moved down 0.3 to 137.0 due to a drop in coal tar, while a decline of 0.1 to 193.7 in the wood products group was due to an easier tone for bleached wood pulp.

Canadian farm product prices at wholesale rose 0.7 to 143.6 between October and

November supported by strength in field products. An index for this series rose 1.1 to 117.9 when firmer prices for oats, barley and flue-cured tobacco overbalanced decreases in potatoes and onions. The animal products index was unchanged at 186.7 when an increase in fluid milk prices balanced narrow declines in livestock and eggs.

STRIKES AND LOCKOUTS*

Canada, December, 1948

During 1948 the loss of time due to industrial disputes resulting in work stoppages was little more than one-third the loss during 1947 and was one-fifth of that in 1946, the peak year. The number of strikes and lockouts in 1948 and the number of workers involved are the lowest recorded for any year since 1939. Preliminary figures for 1948 show 148 strikes and lockouts, involving 41,234 workers, with a time loss of 898,405 man-working days, as compared with 236 strikes and lockouts in 1947, with 104,120 workers involved and a time loss of 2,397,340 days. In 1946 there were 228 strikes and lockouts, with 139,474 workers involved and a time loss of 4,516,393 days.

In 1948 about 60 per cent of the idleness resulted from three strikes, involving coal miners in Alberta and British Columbia, automotive parts factory workers at St. Catharines, Ont., and furniture factory workers in various centres in Quebec. Again demands for increased wages, often linked with questions involving unionism, was a predominant cause, resulting in about 85 per cent of the total time lost during the year.

The month of December, 1948, followed the usual trend at this season of the year. Only four strikes commenced during the month and a total of 11 were in existence, involving 2,481 workers, with a time loss of 18,939 days, as compared with 20 strikes in November, 1948, with 3,307 workers involved, and a time loss of 16,000 days. In December, 1947, there were 15 strikes, with 3,387 workers involved and a time loss of 22,259 days. During the month under review almost half the time loss was caused by two strikes in the construction industry, one of electricians, helpers and apprentices and the other of carpenters, both at Victoria, B.C.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in 1948 was .10 per cent of the estimated working time, as compared with .26 per cent in 1947 and .50 per cent in 1946; .02 per cent in December, 1948; .02 per cent in November, 1948; and .03 per cent in December, 1947.

Of the 11 strikes recorded for December, 1948, two were settled in favour of the workers, two in favour of the employer, two were compromise settlements and one was indefinite in result, work being resumed pending final settlement. At the end of the year four strikes were recorded as un-terminated, namely: strip coal miners, Bienfait-Estevan Field, Sask.; textile factory workers at St. Johns, P.Q.; electricians, helpers and apprentices at Victoria, B.C.; and cleaners and dyers, Vancouver, B.C.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., on May 30, 1946; soft drink factory workers at Edmonton, Alta., December 1, 1947; printing pressmen at Toronto, Ont., December 15, 1947; costume jewellery factory workers at Toronto, Ont., April 29, 1948; coal miners, Edmonton District, Alta., January 13, 1948; and seamen, Great Lakes and St. Lawrence River, June 6, 1948.

* See Tables G-1 and G-2.

Great Britain and other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review, issued as a supplement to the LABOUR GAZETTE for April, 1948, and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in October, 1948, was 147 and 10 were still in progress from the previous month, making a total of 157 during the month. In all stoppages of work in progress in the period there were 18,300 workers involved and a time loss of 51,000 working days was caused.

Of the 147 stoppages which began during October, 10 arose out of demands for advances in wages; 52 over other wage questions; six on questions as to working hours; 21 on questions respecting the employment of particular classes or persons; 53 on other questions respecting working arrangements; four were on questions of trade union principle; and one stoppage was in support of workers involved in another dispute.

United States

Preliminary figures for November, 1948, show 200 strikes and lockouts beginning in the month, in which 90,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,900,000 man-days. Corresponding figures for October, 1948, are 240 strikes and lockouts, involving 110,000 workers, with a time loss of 2,000,000 days.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5, and the statistics of weekly earnings are therefore slightly different.

| Week preceding | Average Hours Worked | | | Average Hourly Earnings | | |
|----------------|----------------------|---------------|-------------------|-------------------------|---------------|-------------------|
| | All Manufactures | Durable Goods | Non-Durable Goods | All Manufactures | Durable Goods | Non-Durable Goods |
| Dec. 1, 1944 | no | no. | no. | cts. | cts. | cts. |
| Nov. 1, 1945 | 45.3 | 46.9 | 45.5 | 70.5 | 77.9 | 60.4 |
| Nov. 1, 1946 | 44.9 | 45.3 | 44.6 | 67.5 | 74.8 | 60.6 |
| Nov. 1, 1947 | 42.4 | 42.5 | 42.3 | 72.9 | 79.4 | 66.7 |
| Dec. 1, 1947 | 42.9 | 43.2 | 42.7 | 84.7 | 91.9 | 77.6 |
| *Jan. 1, 1948 | 43.5 | 43.8 | 43.2 | 85.6 | 92.8 | 78.3 |
| Feb. 1, 1948 | 38.3 | 38.5 | 38.1 | 86.6 | 92.9 | 80.0 |
| Mar. 1, 1948 | 42.8 | 42.7 | 42.8 | 86.6 | 93.2 | 80.1 |
| *Apr. 1, 1948 | 43.2 | 43.4 | 43.0 | 85.0 | 95.0 | 80.8 |
| May 1, 1948 | 41.6 | 41.8 | 41.4 | 89.0 | 96.2 | 82.1 |
| June 1, 1948 | 43.1 | 43.4 | 42.7 | 89.4 | 98.4 | 82.4 |
| July 1, 1948 | 41.7 | 41.6 | 41.7 | 91.4 | 98.4 | 84.4 |
| Aug. 1, 1948 | 42.0 | 42.3 | 41.6 | 92.3 | 99.2 | 85.2 |
| Sept. 1, 1948 | 42.1 | 42.0 | 42.1 | 92.7 | 99.8 | 85.6 |
| Oct. 1, 1948 | 41.7 | 42.0 | 41.5 | 93.4 | 100.9 | 85.8 |
| Nov. 1, 1948 | 43.0 | 43.3 | 42.7 | 94.6 | 102.6 | 86.6 |
| Nov. 1, 1948 | 43.1 | 43.2 | 43.0 | 95.5 | 103.4 | 87.5 |

* The averages at these dates were affected by loss of working time at the year-end holidays in the case of Jan. 1 and by the Easter holidays in the case of April 1, 1948.

TABLE C-7.—WEEKLY SALARIES AND WAGES IN MANUFACTURING

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

| Week Preceding | All Manufactures (1) | | Durable Manufactured Goods | | Non-Durable Manufactured Goods | |
|----------------|----------------------|-------|----------------------------|-------|--------------------------------|-------|
| | Average Weekly | | Average Weekly | | Average Weekly | |
| | Salaries and Wages | Wages | Salaries and Wages | Wages | Salaries and Wages | Wages |
| | \$ | \$ | \$ | \$ | \$ | \$ |
| Dec. 1, 1944 | 33.29 | 32.64 | 36.83 | 36.54 | 29.23 | 27.48 |
| Nov. 1, 1945 | 32.55 | 30.81 | 35.60 | 33.88 | 29.84 | 27.03 |
| Nov. 1, 1946 | 33.32 | 30.91 | 35.83 | 33.75 | 31.17 | 28.21 |
| Nov. 1, 1947 | 38.42 | 36.34 | 41.26 | 39.70 | 35.86 | 33.14 |
| Dec. 1, 1947 | 39.16 | 37.24 | 42.09 | 40.65 | 36.50 | 33.83 |
| *Jan. 1, 1948 | 36.15 | 33.17 | 38.31 | 35.77 | 34.14 | 30.48 |
| Feb. 1, 1948 | 39.26 | 37.06 | 41.65 | 39.80 | 37.10 | 34.28 |
| Mar. 1, 1948 | 40.11 | 38.02 | 42.85 | 41.23 | 37.58 | 34.74 |
| *Apr. 1, 1948 | 39.46 | 37.02 | 41.87 | 39.96 | 37.19 | 33.99 |
| May 1, 1948 | 40.66 | 38.53 | 43.36 | 41.75 | 38.11 | 35.18 |
| June 1, 1948 | 40.49 | 38.11 | 43.03 | 40.93 | 38.12 | 35.19 |
| July 1, 1948 | 41.03 | 38.77 | 43.89 | 41.96 | 38.36 | 35.44 |
| Aug. 1, 1948 | 41.32 | 39.03 | 44.00 | 41.92 | 38.83 | 36.04 |
| Sept. 1, 1948 | 41.33 | 38.95 | 44.44 | 42.38 | 38.46 | 35.61 |
| Oct. 1, 1948 | 42.74 | 40.68 | 46.12 | 44.43 | 39.63 | 36.98 |
| Nov. 1, 1948 | 43.24 | 41.16 | 46.39 | 44.67 | 40.33 | 37.63 |

1 Exclusive of electric light and power.

* See footnote to Table C-6.

TABLE C-8.—HOURS AND EARNINGS IN MANUFACTURING BY PROVINCES AND CITIES

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

* Industries classed in the durable manufactured industries.

¹ Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows—Sept. 1, 1948, 215-6; Oct. 1, 1948, 217-5; Nov. 1, 1948, 219-2; at Nov. 1, 1947, the index was 184-6.

² Chiefly street and electric railways. ³ For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

TABLE C-10.—EARNINGS, HOURS, AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time.

(a) Rent figures are obtained by multiplying increases since June, 1941 by the average rental determined by the census of that date. The increases are based upon reports from real estate agents and *periodic sample surveys* which are now being conducted by direct interview.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(c) Averages include prices for cuts with bone-in.

(d) Revised price.

| Cumulative totals..... | 236 | | 104,120 | | 2,397,340 | ·26 |

* Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1948 ⁽¹⁾

| Industry, Occupation and Locality | Number Involved | | Time Loss in Man- Working Days | Particulars ⁽²⁾ |
|--|---------------------|---------------------|---|--|
| | Establish- ments | Workers | | |
| Strikes and Lockouts in Progress Prior to December, 1948 | | | | |
| LOGGING— Loggers, Campbell River, B.C. | 1 | 100 | 500 | Commenced November 15; protest against discharge of a set (3) of fallers for inefficiency; terminated December 7; reference to Labour Relations Board and negotiations; in favour of employer. |
| MINING— Strip coal miners, Bienfait-Estevan Field, Sask. | 9 | (³)200 | 4,000 | Commenced November 3; for a new agreement providing for increased wages, retention of 40-hour week, welfare fund, etc., following reference to conciliation board; unterminated. |
| MANUFACTURING— <i>Fur and Leather Products</i> — Tannery workers, Owen Sound, Ont. | 1 | 44 | 300 | Commenced October 27; for implementation of award of conciliation board for a new agreement providing for increased wages, two weeks' vacations with pay, etc., terminated December 7; negotiations and conciliation, civic; compromise. |
| <i>Textiles, Clothing, etc.</i> — Textile factory workers, St. Johns, P.Q. | 3 | 100 | 2,000 | Commenced July 12; alleged discrimination in dismissal of workers; unterminated. |
| CONSTRUCTION— <i>Buildings and Structures</i> Electricians, helpers, and apprentices, Victoria, B.C. | 14 | 90 | 2,000 | Commenced October 25; for a greater increase in wages than recommended by conciliation board; unterminated. |
| TRADE— Gas and oil warehouse workers, drivers and helpers, Saint John, N.B. | 1 | 42 | 84 | Commenced November 5; for a union agreement providing for increased wages, reduced hours from 54 to 48 per week, extension of vacation plan and payment for eight statutory holidays; terminated December 2; return of workers; in favour of employer. |
| FINANCE— Government insurance workers, Saskatchewan | 7 | 110 | 385 | Commenced November 17; for increased wages; terminated December 4; negotiations; compromise. |
| Strikes and Lockouts Commencing During December, 1948 | | | | |
| MINING— Coal miners, Glace Bay, N.S. | 1 | 1,175 | 2,350 | Commenced December 8; dispute over alleged shortage of shovels resulting in dismissal of 35 loaders; terminated December 8; return of workers pending reference to umpire re dismissal of loaders; indefinite. |
| MANUFACTURING— <i>Metal Products</i> — Freight car wheels factory workers, Trenton, N.S. | 1 | 60 | 120 | Commenced December 3; protesting alleged dismissal of two workers following dispute over certain work; terminated December 4; negotiations; in favour of workers. |

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA DURING
DECEMBER, 1948⁽¹⁾—*Conc.***

| Industry, Occupation and Locality | Number Involved | | Time Loss in Man- Working Days | Particulars ⁽²⁾ |
|---|---------------------|---------|---|--|
| | Establish- ments | Workers | | |
| Strikes and Lockouts Commencing During December, 1948— <i>Conc.</i> | | | | |
| CONSTRUCTION— <i>Buildings and Structures—</i> Carpenters, Victoria, B.C. | 39 | 550 | 7,000 | Commenced December 6; for increased wages as recommended by second conciliation board; terminated December 22; negotiations; in favour of workers. |
| SERVICE— <i>Business and Personal—</i> Cleaners and dyers, Vancouver, B.C. | 1 | 10 | 200 | Commenced December 7; for increased wages as recommended by conciliation board; unternminated. |

(¹) Preliminary data based where possible on direct reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(²) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(³) 150 indirectly affected.

March, 1949

The Labour Month in Brief

Employment activity was somewhat reduced during January and February because of winter conditions; but the general situation continued to be healthy, and the outlook for the coming months for both workers and employers was good. Industry continued to be comparatively free from industrial disputes. The cost of living remained stable.

Employment

In the year 1948, not only were record employment levels reached, but workers generally showed a greater inclination to stay on the job than in any previous post-war year. As a result, both labour turnover and absenteeism declined markedly.

This greater employment stability, along with large expenditures in most industries on new plant and equipment, helped to increase production. In 1948, employment of paid workers in manufacturing, for example, averaged one per cent more than in 1947 and the volume of manufacturing production rose by almost three per cent.

At the beginning of 1949 employment was affected by conditions of winter weather, and a certain number of workers, mainly

unskilled and semi-skilled, were seasonally out of work. Nevertheless employment was at a higher level than in the corresponding period a year earlier; in fact at January 1 the Dominion Bureau of Statistics index number of industrial employment was the highest in the record for that time of year, though down somewhat from the previous month.

The seasonal decline in the Bureau's index from December 1 to the beginning of January averaged 3.4 per cent for the country as a whole; the losses ranged from 1.8 per cent in Ontario and 2.7 per cent in Alberta, to 5.2 per cent in Saskatchewan and 6.2 per cent in British Columbia, where unfavourable weather was an important factor. The index numbers of employment in Nova Scotia, Quebec, Ontario, Manitoba and Alberta were higher than at January 1, 1948, but those in the remaining provinces were lower. Except in New Brunswick, the declines were slight. In that province there was a reduction of 5.8 per cent.

Although for Canada as a whole employment levels were thus higher than a year ago, unemployment also appeared to have

LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT

risen. The number of unplaced applicants for employment registered at local offices of the National Employment Service totalled 265,000 late in February. This compared with a peak of just over 200,000 in the winter of 1948; but indications were that by early March, unemployment was again on the wane.

An encouraging factor was the increased protection afforded by unemployment insurance; during January, 1949, a total of 163,643 persons received benefit, as compared with 106,367 in January, 1948.

Industrial Relations

Time loss through work stoppages arising from industrial disputes in Canada during January, 1949, was the lowest recorded for any month since June, 1945.

Within the field of federal jurisdiction, the month was featured by the settlement of a lengthy dispute affecting pilots employed by Trans-Canada Air Lines and the continuance of harmonious relations in industry generally. A Conciliation Board conducted hearings in the dispute between the Canadian Seamen's Union and various shipowners operating dry cargo vessels on the east and west coasts.

Preliminary figures for Canada show 10 strikes and lockouts in existence during the month of January, involving 1,811 workers, with a time loss of 9,700 man-working days, as compared with 11 in December, 1948, with 2,481 workers involved and a time loss of 18,939 days. In January, 1948, there were 19 strikes, involving 12,595 workers, with a time loss of 135,780 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in January, 1949, was .01 per cent of the estimated working time as compared with .02 per cent in December, 1948; .17 per cent in January, 1948; and .10 per cent for the year 1948.

Cost of Living

The Dominion Bureau of Statistics cost-of-living index declined one-tenth of a point between January 3 and February 1, 1949. In the five months since September, the index has remained steadier than at any time since the lifting of price controls, showing a net rise of only half a point; whereas over the corresponding period in the fall and winter of 1947-48 the index rose over ten points.

At February 1, 1949, the index stood at 159.5. A drop in the food index from 202.2 to 200.4 overbalanced increases for fuel and light, home furnishings and services, and miscellaneous items. Egg prices again moved sharply lower, while meats and

shortenings were also down. Citrus fruits advanced, with other foods showing little change. Firmness in coal and coke moved the fuel and light series up from 130.0 to 130.8. Home furnishings and services also gained 0.8 to 167.8. There was a rise in miscellaneous items from 126.6 to 128.1 as tobacco, cigars, and theatre admissions showed some increases. The clothing index dropped fractionally from 181.9 to 181.8. There was no February re-calculation of the rent index which remained at 121.7.

Foreign Trade

Canada's commodity trade with all countries during 1948 was valued at \$5,747 millions, which is the highest figure on record. The five-billion-dollar mark was passed in 1944 and again in 1947, but the upward trend was carried still further in 1948. While the value of Canadian exports, amounting to \$3,075.4 millions, was exceeded in 1944 and 1945, that of Canadian imports rose to a new peak of \$2,636.9 millions. With foreign exports of \$34.6 millions, a favourable balance of trade with all countries of \$473.1 millions was achieved.

Of particular significance at this time are the large purchases by Canada from the United Kingdom, which contributed goods valued at \$299.5 million to the total, this being a new record in the history of Canada's trade with that country. Exports to Great Britain declined in value from the peacetime peak reached in 1947. On balance, however, this Dominion is in a favourable position on the basis of commodity exports and imports. The figures issued by the Dominion Bureau of Statistics do not indicate the value of shipments for which payment was authorized by the Economic Co-operation Administration, in Washington. Nor does this favourable balance with the United Kingdom take into consideration credits made available by this country to Great Britain. The gap between exports and imports has been narrowed, and at \$389.2 millions is the shortest since 1940, when Canada's favourable trade balance with the United Kingdom was \$386.9 millions.

Canada's total trade with the United States was valued at \$3,327.9 millions, which represents a new record. Exports to that country rose to a peak of \$1,501.0 millions, compared with \$1,034.2 millions in 1947, but imports were slightly lower, the respective figures being \$1,805.8 millions and \$1,974.7 millions. The unfavourable balance of trade with the United States was lowered last year to \$283.6 millions from \$918.1 millions in 1947.

NOTES OF CURRENT INTEREST

Statements by AFL and TLC concerning Communism

In a statement issued on February 8, the Executive Council of the American Federation of Labour criticized Communist influence in the Trades and Labour Congress of Canada, and called on officers of the TLC for "vigorous action to eliminate completely every vestige of Communist influence and control in the affairs of the Trades and Labour Congress."

Mr. Percy R. Bengough, President of the TLC, was quoted in reply the same day by the *Toronto Globe and Mail* as saying that the AFL had arrived at its conclusion without giving TLC Executive members an adequate hearing.

On February 22, the Executive Council of the TLC issued a further reply, in which it asserted that the TLC had at all times been opposed to all totalitarian ideologies, including Communism. It pointed out, however, that, in accordance with its constitution, the Congress had accepted as delegates to conventions the elected representatives of affiliated unions irrespective of race, creed, colour or opinions. It announced further that it was circularizing all affiliated organizations and local unions strongly advising them not to elect any known Communists to office or as delegates to TLC conventions.

The series of events leading up to the interchange between the Executives of the AFL and the TLC have been described previously in the *LABOUR GAZETTE* (L.G., Oct., 1948, p. 1082; Dec., p. 1366; Jan., 1949, p. 7). They arise from a split in the ranks of the TLC between supporters of President Percy R. Bengough and his Executive on the one side, and on the other side representatives of a group of international unions affiliated with both the AFL and the TLC. The latter group, led by Frank H. Hall, Canadian Vice-President of the Brotherhood of Railway and Steamship Clerks, has charged that the TLC is harbouring Communists, and has organized itself as an association to combat Communism within the ranks of the TLC.

Another factor in the split has concerned the position of AFL international unions within the TLC, particularly as regards voting strength at conventions.

The statement of the AFL Executive was issued in Miami, Florida, where AFL leaders had gathered for a regular Executive session. Mr. Bengough had led a four-man

delegation of TLC Executive members to meet with the AFL. Mr. Hall had also been present, with members of his group.

The text of the AFL statement is as follows:—

The Executive Council has had submitted to it voluminous documentary and oral testimony on the dispute between the officers of the Canadian Trades and Labour Congress and various international representatives of AFL affiliates located in the Dominion of Canada.

The evidence presented in this dispute discloses a shocking picture of the influence wielded by the Communists in Canada in the affairs of the Trades and Labour Congress. While it is apparent that the proportion of Communists in the Trades and Labour Congress is relatively small, it is clearly evident that the Communists exercise influence in that organization far in excess of their proportionate strength.

The AFL has a long history of consistent and vigorous opposition to Communism, both at home and abroad. We have refused to become associated with any organization impregnated with Communists and have zealously guarded our structure against Communist infiltration into our ranks, while giving vital assistance to free trade unions all over the world in their struggles against this vicious inhuman ideology. We are determined to pursue this policy and we call on the leadership of all our affiliates in Canada and the officers of the Trades and Labour Congress for vigorous action to eliminate completely every vestige of Communist influence and control in the affairs of the Trades and Labour Congress. To this end, we pledge the complete co-operation of the AFL. We denounce without reservation the undemocratic action of the officers of the Trades and Labour Congress in suspending the Brotherhood of Railway Clerks without trial or hearing for their activities in support of an AFL anti-Communist affiliate which is engaged in a struggle with a Communist-dominated union affiliated with the Trades and Labour Congress. While this suspension has been lifted, we urge that all reference to it be expunged from the records of the Trades and Labour Congress and that constitutional safeguards be enacted to prevent a repetition of this undemocratic action. We also strongly urge that the Trades and Labour Congress of Canada amend its constitution so that AFL international unions shall enjoy voting rights in conventions of the Trades and Labour Congress in accordance with the amount of per capita tax paid by these organizations.

The Executive Council is extremely desirous of maintaining the fine relationship that the AFL has had with the Trades and Labour Congress of Canada for many years. We wish to state very emphatically, however, that this can only be achieved on the basis of the tried and true principles that have characterized free trade unionism on this continent during the last century. We can not and will not compromise with the Communists whose number one objective both in the U.S. and in Canada, is the destruction of movements such as ours. We believe and trust that the officers of the Trades and Labour Congress in co-operation with the

representatives of our international unions in Canada will find a way in which it will be possible for us to move forward together toward this very desirable objective. Failure to do so will lead to a chaotic condition among the trade unions in Canada. We reiterate, however, that we will not and can not accept a solution of our difficulties which in any way represents a compromise with the Communists.

In a press release on February 11, Mr. Hall regarded the statement of the AFL Executive as "complete vindication of our activities both as to principle and procedure," and declared:—

We think it is obvious that the Congress must make a choice between continued support and affiliation of Communist elements and continued affiliation of the AFL unions. It cannot have both. Our anti-Communist association will gladly co-operate with officers of the Congress to achieve the desired end, but we can neither compromise nor temporize.

The text of the TLC Executive Council's statement of February 22 is as follows:—

The Executive Council of the TLC of Canada, in session in the city of Ottawa, has considered the statement issued in Miami by the Executive Council of the AFL, under the dateline of February 8, 1949.

We are in accord with the statement that the proportion of Communists in Canada is relatively small in the affiliated organizations of this Congress and this is particularly demonstrated in the elected officers of Provincial Federations of Labour, Provincial Executive Committees and Trades and Labour Councils throughout the Dominion of Canada.

We deplore the fact that the duly established Joint Co-ordinating Committee of the AFL and the TLC of Canada, which was created to consider and advise on all matters of dispute between these two trade union centres, was not permitted to function at the Miami meeting and that no time was given to the elected officers of this Congress to reply to the voluminous documentary and oral testimony submitted by some Canadian officers of AFL affiliates in the Dominion of Canada, a great deal of which was not in accordance with the facts.

The TLC of Canada as a democratic trade union centre has at all times been opposed to all totalitarian ideologies, including Communism. This has been clearly exemplified by the fact that following the first meeting of the WFTU, held in London in February, 1945, the Executive Council of the TLC of Canada definitely decided that the WFTU did not in any way represent the principles of free trade unionism and advised against affiliation or participation. As a result, the TLC of Canada never became associated with this Communist-dominated world organization.

Within the Dominion of Canada, as the Parliament of Labour, the TLC of Canada has taken the same position as all elected bodies in Canada, as for instance, the Dominion and provincial Parliaments and municipal bodies. We have accepted as delegates at Conventions of the Congress, Provincial Federations and Trades and Labour Councils, the duly elected and properly credentialed representatives of affiliated unions, irrespective of their race, creed,

colour or opinions. To do otherwise is not within the power of this Executive Council but would necessitate constitutional changes which would require convention consideration and decision.

We fully realize that a democratic institution such as the TLC of Canada is, and has always prided itself on being from the time of its founding sixty-five years ago, has some weaknesses when confronted with the strategy of Communists who are prepared to use the established freedoms of democracy in order to bring about chaos and the destruction of democracy. Realizing this, however, we are not prepared to substitute the methods of dictatorships for those of democracy or advocate the curtailing of the freedom of others with the belief that by so doing we will strengthen our own freedoms.

The British Trades Union Congress has been confronted with the same problem and has advised all of their affiliated organizations to prevent, by democratic means, the election of Communists to any administrative or representative office. The Executive Council of the TLC of Canada is in accord with this procedure and has unanimously decided to circularize all affiliated organizations and local unions strongly advising them all not to elect any known Communist to any representative or administrative office in their local union or as delegates to Trades and Labour Councils, Provincial organizations or conventions of this Congress.

The other questions and suggestions contained in the statement issued by the AFL can only be dealt with by the TLC of Canada in convention as they would require changes in the Constitution.

Two other decisions have been arrived at: To call a meeting at an early date of all ranking Canadian officers of affiliated international unions having membership in Canada to consider the entire situation.

The Executive Council are also preparing a reply to the AFL on the brief submitted by representatives of international unions in Canada to the Executive Council of the AFL to which sufficient time was not given to the Congress officers attending the Miami conference to make a proper reply.

Annual campaign to find summer jobs for students

Early in January the Hon. Humphrey Mitchell, Minister of Labour, announced the resumption of the annual survey by the Department of Labour to uncover thousands of summer job openings for university undergraduates.

The number of jobs needed will at least equal the 1947 figure which was estimated at 40,000. The campaign is being directed, as in former years, by the Technical Personnel Division of the Department, and the Executive and Professional Division of the National Employment Service.

The Minister pointed out that a large proportion of the students must earn during their vacations in order to finance their studies. This applies particularly to veterans, who draw living allowances only while they are actually attending university.

Many students, also, need specific types of summer employment in order to obtain practical experience in the course of obtaining their degrees. Mr. Mitchell said that employers have been the first to stress the value of such training for those who, in many cases, will become their permanent employees on graduation.

The Minister said that a questionnaire had been sent to more than 12,000 potential employers of students to determine what job openings could be expected in the spring, the requirements for these jobs, and the remuneration. As employers returned these questionnaires, job lists would be compiled and sent to universities. The lists would be amended regularly up to the end of the university year.

In addition to finding temporary summer employment for undergraduates, the survey is also aimed at finding permanent positions for members of the 1949 graduating class.

The Minister stated that the National Employment Service stands ready to assist employers in such matters as arranging interviews with students at the universities.

Educational classes for immigrants The educational and other assistance given to immigrants by provincial educational authorities, local school boards, and welfare organizations throughout Canada, is of the greatest importance in bringing to these newcomers an understanding of the Canadian way of life, Hon. Humphrey Mitchell, Minister of Labour, stated recently.

The Minister reported that at the present time about 14,000 adult immigrants are attending 650 classes across Canada, under the supervision of provincial and local educational authorities, with language difficulties, of course, receiving top priority.

The help given by various agencies, particularly those engaged in adult education, has been of valued assistance in teaching the new citizens the fundamental rights and responsibilities of Canadian citizenship, the Minister said.

Over and above the direct benefits deriving from educational assistance, are less easily assessed benefits resulting from the opportunity for the immigrant to make worthwhile social contacts, through attendance at regular classes and through other social and educational functions arranged by local and national welfare committees and organizations.

On February 3, the Hon. J. A. MacKinnon, Minister of Mines and Resources, informed the House of Commons that during 1948 a total of 125,414 immigrants entered Canada.

"This," he said, "was the largest total of any year since 1929, and is almost exactly twice as many as came in during 1947, when the figure was 64,127.

"Of the 125,141 immigrants, 46,057 came from the British Isles, and 7,381 from the United States. Immigrants from northern European races numbered 16,957, including 10,169 Dutch. Other races contributed 55,019 new Canadians, the largest individual groups being 13,799 Poles and 10,011 Ukrainians.

"Disposition of the immigrants by provinces is as follows:—

| | |
|---------------------------|--------|
| Ontario | 61,621 |
| Quebec | 24,687 |
| British Columbia | 11,918 |
| Alberta | 9,715 |
| Manitoba | 7,750 |
| Saskatchewan | 5,087 |
| Nova Scotia | 2,813 |
| New Brunswick | 1,476 |
| Prince Edward Island..... | 269 |
| Yukon Territory | 64 |
| Northwest Territories ... | 14 |

"The movement of immigrants to Canada during this year was facilitated by an arrangement made with the Cunard White Star line which kept the *Aquitania* on the north Atlantic run and provided over 12,000 priority berths for immigrants. This arrangement, but expanded to cover 15,400 priorities, has been continued for the year 1949. The Government also assisted in the conversion of a German prize vessel which is now known as the *Beaverbrae* and is engaged in carrying to this country from continental Europe, close relatives of persons resident in Canada. Finally, the Government has arranged with Trans-Canada Air Lines for 10,000 air passages to be made available to immigrants from the United Kingdom between the 1st of July, 1948, and the 31st of March, 1949.

"During the year immigration offices were opened or reopened in Glasgow, Liverpool and Rome."

More detailed statistics of immigration to Canada during 1948 appear in the *Labour Statistics* section of this issue of the *LABOUR GAZETTE*.

**Retirement
of Miss M.
Mackintosh,
outstanding
authority on
Canadian
labour law**

"Margaret Mackintosh is the Canadian authority on labour legislation and trade union law. She is one of a small group of distinguished civil servants in Ottawa whose titles give no evidence of their intrinsic value to the Dominion, but whose

work and influence have an important long-range effect upon our history. She is described in the civil service listing as 'Industrial Research Worker.' She is a zealot. What she herself has made of a post that might have been colourless is the measure of herself. There are a number of women of her stature in similar work in the United States. In Canada, as a woman, she is unique."

This paragraph by a discerning outside observer, writing for one of Canada's leading periodicals, epitomizes the distinguished service of Miss Margaret Mackintosh, MBE, now retiring because of ill-health from her duties as Chief of the Legislation Branch of the Federal Department of Labour.

Graduating with honours from Queen's University, she found her métier in the Department of Labour. She came to the Department in 1916 under F. A. Ackland, then Deputy Minister.

A pioneer in the analysis of Canadian legislation, she was also keenly interested in the development of labour standards; and in this connection she was active in Canada's association with the International Labour Organization, and in the field of Dominion-Provincial relations. Her direct and incisive mind made her well-qualified to work in the tradition, which she herself helped to mould, of objectivity in the study of labour problems.

One of the important functions of the Department is the compilation of a compendium of the labour laws and regulations of this country. Since 1919, Miss Mackintosh has developed this project until her annual report on "Labour Legislation in Canada," with its basic consolidations, has become a standard work of reference on labour law.

Miss Mackintosh played a prominent part in the organization of the Canadian Association of Administrators of Labour Legislation—a body which includes members of commissions, boards, and Departments of Labour from every province, and which has as its object improved and uniform standards of labour legislation and enforcement.

It was natural that she should become the consultant of those specialists who delve into the intricacies of labour legislation. Accordingly, from Universities and provincial Departments of Labour, there gravitated a steady stream of inquiry on those problems that are now recognized as of major importance in the social-economic structure of the country.

A phase of her work that attracted her special interest was her particular concern with the problems of women and children.

Miss Mackintosh has written on many phases of labour problems for government and other publications. Perhaps the most outstanding of her publications are her brochures on "Government Intervention in Labour Disputes in Canada" and "Trade Union Law in Canada."

Among her other publications are: "An Outline of Trade Union History in Great Britain, the United States and Canada;" "The Canadian Labour Movement—An Historical Analysis;" "War Labour Policies in Canada;" "The Co-operative Movement in Canada;" "Labour Legislation in Canada—A Historical Outline of the Principal Dominion and Provincial Labour Laws;" "Legislation Concerning Collective Labour Agreements."

It was in recognition of her contribution to research in Canadian labour legislation and its influence on Canadian social and economic development that in the King's Birthday Honours of 1943 Miss Mackintosh was awarded the MBE.

From many quarters the hope is expressed that as her health permits, Miss Mackintosh will find new channels for putting to use her unequalled experience in labour legislation.

**Working
conditions of
hourly-paid
Government
employees**

Briefs on behalf of hourly-paid employees of the Federal Government were presented recently by the Trades and Labour Congress of Canada, the Canadian Congress of Labour, and the Civil Service Federation of Canada.

Both the TLC and the CCL requested recognition and full collective bargaining rights for organized Federal Government employees, leading to signed agreements.

Both organizations also sought the five-day, forty-hour week; payment for overtime at the rate of time and one-half, with double-time for Saturdays, Sundays and statutory holidays; improved provisions for and vacations with pay, and statutory holidays; a contributory superannuation fund; and a cumulative sick-leave fund.

Both briefs stressed the desirability of joint labour-management consultation.

In view of the fact that the Treasury Board Committee was dealing first with leave conditions, the brief of the Civil Service Federation was confined to this subject. It requested two weeks' annual leave with pay, cumulative sick leave, ten statutory holidays, and cumulative special leave. The Federation will submit requests on other aspects of the conditions of prevailing rates employees at a later date.

Introduction and withdrawal of Quebec Labour Code A bill to enact a Labour Code for the Province of Quebec was introduced in the Assembly on January 19, but was withdrawn for further study on February 9.

The Minister of Labour, Hon. Antonio Barrette, announced that the withdrawal was for the session only, and was intended to provide time for the study of representations received since the publication of the bill and to hear further suggestions. Such suggestions had been invited at the time the bill was introduced.

The proposed Labour Code would consolidate, with important revisions, several existing Provincial Acts concerning labour relations, disputes, public service disputes, incorporation of trade unions, juridical extension of collective agreements, and minimum wages.

Among the new provisions in the Code are some which evoked opposition from labour organizations and other groups. One clause which aroused particular controversy would bar from certification by the Labour Relations Board an employee association having as an officer or representative any person who is a Communist or Marxist, or who supports or co-operates in any way with a party recognized as such, or who is "notoriously known" as a "follower, preacher or propagandist of the Communist or Marxist doctrine."

This section of the Code was immediately opposed by both the Canadian Congress of Labour and the Trades and Labour Congress of Canada in statements issued by their respective presidents, Messrs. A. R. Mosher and Percy Bengough, intimating that the section might be interpreted so as to affect adversely many besides Communists and fellow-travellers. The Canadian and Catholic Confederation of Labour also included this section of the Code among those to which it took exception.

Upon further consideration of the bill, labour organizations also protested, among

other things: the requirement that associations have their books audited by an auditor (this, it was felt, would place an undue expense on a union); the requirement that unions supply various financial and other information, not only to their members, but also to the Labour Relations Board (which contains employer representation); restrictions on union security; certain of the procedures involved in certification, negotiation and conciliation; restrictions on the right to strike; and restrictions on collective bargaining and strikes by public service employees.

Early in February representatives of the Quebec Provincial Federation of Labour (AFL), the Canadian Congress of Labour, and the Canadian and Catholic Confederation of Labour met in a two-day conference and agreed to form a joint committee, to be known as the "joint Conference of Organized Labour of the Province of Quebec." This group sent a telegram to the Hon. Maurice Duplessis, Premier of the Province, requesting withdrawal of the bill. It was announced that the Joint Conference would be a permanent body.

Co-operation of the three major labour groups in this manner was unprecedented within the Province. (Last year, however, the TLC and CCL had combined at the national level to submit a joint request to the Dominion Government for disallowance of the Prince Edward Island Trade Union Act (L.G., July, 1948, p. 695), and these two organizations have also co-operated in British Columbia.)

The bill was also opposed by the Quebec Superior Council of Labour, which includes representatives of employers, labour, economists and sociologists.

ILO establishes Canada Branch Owing to war exigencies, the International Labour Office moved to Montreal in 1940. Recently, it was decided to re-institute its headquarters at Geneva.

Accordingly it was decided to establish a Canada Branch in conformity with the policy of having Branch offices in leading industrial countries.

The functions of the Canada Branch will be to maintain liaison with the Labour and other Government Departments at Ottawa, with provincial Labour Departments, and with organizations of employers and workers and other interested bodies.

The Canada Branch is at Montreal, but it is anticipated that it will be moved to Ottawa shortly.

**V. C. Phelan
heads
Canadian
ILO Branch**

After 33 years in the public service of Canada, Vincent Cyril Phelan has been appointed Director, International Labour Office, Canadian Branch. He took over

his new duties on February 15.

Mr. Phelan was born at Parkhill, Ontario, and received his high school and university education in Ottawa. He is a graduate of St. Patrick's College, which is affiliated with the University of Ottawa.

He entered the employ of the Post Office Department at Ottawa in 1916, and four years later was transferred to the Department of Labour. He held various positions in the Employment Service of the Department up to 1936, including several years as Assistant Director of the Dominion-Provincial Employment Service. For a time he was Secretary to the Minister of Labour and for two years was Director of Registration under the National Employment Commission.

When the Unemployment Insurance Commission was established in 1940, Mr. Phelan became its first Chief Employment Officer, a position he held for two years, prior to his appointment as Director of Information for the Department of Labour. He served on a number of departmental and inter-departmental committees that dealt with employment and public information during the Second World War, and was chairman of a subcommittee that assisted in drafting the employment provisions of the legislation designed to regulate the post-war employment of Canadian war veterans.

As Director of Registration under the National Employment Commission in 1936-38 he organized the national registration of people on relief all across Canada.

As Chief Employment Officer he was the chief architect of the national system of public employment offices set up under the Unemployment Insurance Act of 1940.

From the conclusion of hostilities in 1945 until the end of 1948, he was a Canadian representative at fourteen international conferences held severally in Paris, Copenhagen, London, Geneva, Cleveland, Toledo, Seattle, and Montreal, as well as the Commonwealth Conference on Social Security in London in 1947. At most of these conferences he took a prominent part, acting as general chairman at three ILO conferences and sub-committee chairman at a number of maritime and industrial meetings.

These activities naturally developed into his becoming European representative of the Department of Labour dealing with Displaced Persons and immigration from the

United Kingdom and carrying on liaison with Departments of Labour in Europe.

For more than 20 years Mr. Phelan took an active interest in Civil Service activities and served as President of the Civil Service Federation of Canada for 19 years. He was a member of the Executive of the International Association of Public Employment Services and was elected International President at the Kansas City convention in 1940.

**Annual
renewal of
unemployment
insurance
books**

Changes have been made in the method of renewal of unemployment insurance books at the beginning of the fiscal year on April 1. In former years, employers were required to deliver their books to the nearest

local office of the Unemployment Insurance Commission on April 1.

This year, instructions have been sent to employers by the local offices. In certain cases of employers who have large pay-rolls, the local manager has been empowered to arrange for the renewal on the premises of the employer.

The new books provide space for contributions beginning February 28, so that contributions made after February 26 may be made, either in the current book or in the new book, depending upon the date the renewal takes place. If instructions are followed carefully by employers it is expected that the new plan will improve the service rendered by the Commission.

The attention of both employers and workers is drawn to the Regulations requiring that an employee's insurance book should be stamped up to date and handed to him on separation from employment. The book can then be handed to the new employer immediately upon entering a new job. Failure to observe this regulation carefully, either by the employer or the worker, leads to delay and possible confusion, with the added danger that the worker may lose credit for some of his contributions.

The Unemployment Insurance Regulations require:—

- (1) Employers to obtain an insurance book promptly for each new insurable employee;
- (2) That contributions be recorded within 72 hours of each pay day;
- (3) That when an employee separates from his employment, his book must be given to him by his employer immediately upon separation.

If an employer of insured workers hires an employee who has no insurance book, application for one should be made at once to the nearest local office of the Unemployment Insurance Commission.

Real estate agents in excepted employment

The Unemployment Insurance Commission has made a regulation excluding from the coverage of the Act real estate agents who are paid solely by commission.

This is an amendment to the Unemployment Insurance Coverage Regulations, 1948. The amending regulation has been approved by Order in Council P.C. 5838, dated December 17, 1948, and is effective from January 12, 1949, the date of its publication in the *Canada Gazette*.

There had been a good deal of uncertainty among real estate firms ever since the inception of the Unemployment Insurance Act whether their agents on commission are employees under contract of service and therefore subject to the Act, or independent operators who can be considered as in business on their own account. Some agents have been insured, but it has been difficult to decide the status of a good many others in view of the limited degree of control exercised over them by the firms employing them.

Where persons working in insurable employment and persons working in non-insurable employment are employed under conditions and terms of service that are so similar as to result in anomalies in the operation of the Act, the Commission is empowered by regulation to treat the whole class as non-insurable. The Commission has now done this as regards real estate agents by passing the new regulation.

The effect is that a real estate agent, whether or not he is an employee, is now excepted so far as his activities as a real estate agent are concerned, provided he is paid solely by commission. However, salaried employees of a real estate firm, such as stenographic and clerical staff, remain insurable.

Inquiry as to disallowance of P.E.I. labour Act

In the House of Commons on February 1, Mr. Angus MacInnis (Vancouver East) inquired whether the Government planned to take action to disallow the Prince Edward Island Trade Union

Act as had been requested by labour representatives (L.G., July, 1948, p. 695).

Replying, two days later, the Hon. Stuart S. Garson, Minister of Justice, said: "My

information is that the Government of Prince Edward Island proposes at the approaching session of the Legislature to introduce a measure to amend the statute in question. Final action on the petition for disallowance has been delayed pending action by the Prince Edward Island Legislature to amend the statute accordingly."

CCL unions advised to seek wage increases

In a statement on wage policy issued on January 11, the Executive Council of the Canadian Congress of Labour announced that it considered general wage in-

creases for Canadian workers to be justified by present conditions.

The statement said that "unprecedented profits, increased productivity, existing inequalities and the necessity for establishing rates which would provide a decent standard of living made it necessary for workers to demand an upward adjustment of wages in 1949. The amount of increases to be asked will be determined by individual unions in the light of conditions in their industries and plants. The statements of corporations show that wage increases can be absorbed without increasing prices."

The Congress also said that it was recommending to its unions that strong efforts be made in the negotiation of new contracts to obtain social security provisions, eliminate the existing differentials in rates paid male and female workers, establish the 40-hour week and strive for a guaranteed annual wage.

Housing activity in Canada, 1948

House-building activity continued to reach new high levels during the first nine months of 1948, it is reported in the October issue of *Housing in Canada*,

a factual summary published quarterly by the Economic Research Department, Central Mortgage and Housing Corporation.

The pace of building continued to press on the material producing industries. Despite a general increase in the output of building materials in 1948, stocks remained low and shortages of individual items developed from time to time.

Employment in the construction industry reached an unprecedented peak of 323,000 in September, 14 per cent more than in the corresponding period of 1947. Average employment over the first three-quarters was 16 per cent higher in 1948 than in 1947.

Earnings as well as employment moved up. Average hourly rates paid to construction tradesmen increased 9 per cent

during the first nine months of 1948. The composite index of hourly wage rates of construction tradesmen (including holiday pay allowances), based on information covering eight trades in 15 Canadian centres and their environs, rose from 162.8 in December, 1947, to 177.7 in September, 1948. The corresponding increase during 1947 was 11 per cent.

Time lost through strikes in the building industry in 1948 totalled 30,396 man-working days during the first 10 months, a decline of 8 per cent from the corresponding period of 1947. Over two-thirds of the time loss took place in April and May, the period during which the principal wage increases of the year occurred.

"The most encouraging sign in the construction cost field in 1948," the report states, "is the levelling off of the marked price increases of 1946 and 1947." The combined index of building material wholesale prices and wage rates in construction trades increased 7 per cent from January to September, 1948, as compared with 17 per cent in 1947.

Program of education of CCL

In co-operation with local union leaders and several universities, officials of the Canadian Congress of Labour have been carrying out, during the winter months, a program of education in various centres across Canada. Broadly speaking, the program as described by Mr. A. R. Mosher, President of the Congress, "is indicative of the expanding activities and interests of our Congress. Labour has a very definite and constructive role in the life of the community and of the nation as a whole. Through the schools and week-end institutes. . . we are training members to be better Canadians and better trade unionists."

Commencing in January and continuing until early in April, between 40 and 50 week-end institutes will have been provided in as many communities throughout the country. It is expected that by the time the program is completed a total of more than 5,000 union members will have benefited from the courses.

The manner of conducting the institutes follows a general pattern. Lectures and opportunities for discussions are provided on such topics as labour legislation and arbitration, collective bargaining, the functions of shop stewards, how to make local unions more effective, job evaluation, labour-management relations, trade unions in relation to the public, labour's social and economic objectives and trade unions and co-operatives.

In most instances, all-day sessions, conducted by national and other prominent Congress officials, are held on Saturday and Sunday with a dinner meeting on Sunday evening to which are invited prominent citizens of the community. Whenever it can be arranged, "a one-day political action workshop" is held on Monday, followed in the evening by a mass rally of all Canadian Congress of Labour members in the area.

In addition to the week-end institutes, a "week-long winter school" was conducted, in co-operation with the University of Toronto, at Ajax, Ontario, and a four-day staff seminar was held at the Guild of All Arts, Scarboro, Ontario. The Ajax school followed the pattern of that held there in January, 1948 (L.G., April, 1948, p. 294). Courses were given by university professors and labour leaders on job evaluation, time studies, union contracts, problems in industrial organization, economic and political trends, corporation finance and trade union publicity. Following much the same pattern as the instruction given at Ajax, courses were provided at the universities of Alberta, Saskatchewan, Manitoba, Western Ontario, McGill, Dalhousie and St. Francis Xavier.

Good-will meeting of management and labour at Montreal

More than three hundred representatives of management, labour and government attended a "good-will" meeting at the Mount Royal Hotel, Montreal, on December 28. Approximately 8,000 employees, all members of TLC unions, from 15 major industries in the Province of Quebec, were represented.

Chief spokesmen of the evening were: Mr. C. C. Thackray, President of the Dominion Rubber Company of Canada, Limited; Mr. Percy R. Bengough, CBE, President of the Trades and Labour Congress of Canada; and Mr. Gerard Thibault, who conveyed to the meeting greetings from the Minister of Labour for the Province of Quebec.

Mr. Thackray spoke on the need for management and employees to work together. "The business of collective bargaining has become the cornerstone of industrial good-will," he said. The obligation of adhering to the terms of a contract rests equally with management and union," he added. "To the extent that this is carried out, both in letter and in spirit, industrial peace and progress will result."

Emphasizing the importance of productivity, Mr. Thackray said that high man-hour productivity is the "greatest assurance

we can have of good wages, good working conditions and maintenance of a reasonable level of prices."

Mr. Bengough referred to the friendly spirit of co-operation existing between unions of the Trades and Labour Congress and employers. "Our interests are identical," he added. Good industrial relations, he said, are the general rule throughout Canada, and the fact that labour disputes are treated as news is a tribute to both employers and workers.

"The Trades and Labour Congress of Canada has not the authority to order or advise its affiliated membership to take strike action," Mr. Bengough told the meeting. Participation in sympathetic strike movements, or any other action on the part of its members which would violate contracts, is not approved.

Withdrawal of support from WFTU

British, American and Dutch labour organizations formally abandoned the World Federation of Trade Unions at a meeting of the WFTU Executive Committee on January 19. In withdrawing from the WFTU, Mr. Arthur Deakin, representing the British Trades Union Congress, and Mr. James Carey, of the U.S. Congress of Industrial Organizations, charged that it was operating as a Communist propaganda agency. According to press reports, Mr. Deakin claimed that a provision in the original 1945 charter of the WFTU, excluding domination by any one political ideology, was being violated. Acting on the instructions of the TUC General Council (L.G., Jan., p. 14), he introduced a motion calling for complete suspension of WFTU activity for one year. This, he said, was defeated by the WFTU Executive Committee by a vote of 4 to 3, with delegates from Russia, Italy, China and France opposing the British, Dutch and American representatives.

Mr. Deakin and Mr. Carey were subsequently reported to be contemplating the formation of a new international trade union organization consisting of anti-Communist labour groups. The American Federation of Labour was also stated to be interested in the establishment of such a new group. (The AFL had always refused to join the WFTU because of the participation of Russian trade unions.)

The position of Canadian labour organizations towards the WFTU is as follows. The Trades and Labour Congress sent

delegates to the first World Trade Union Conference, held in London, England, in February, 1945, which laid the groundwork for the formation of the Federation (L.G., April, 1945, p. 557), but the TLC did not participate in any further meetings.

The Canadian Congress of Labour, on the other hand, played an active part in the early work of the Federation but in recent months has become critical of the tactics followed by that organization. On January 11 the Executive Council of the CCL adopted the following resolution, advocating the abolition of the WFTU and declaring its willingness to support a new international organization which would concern itself with the day-to-day problems of workers throughout the world:—

The World Federation of Trade Unions is four years old. It came into being at the request of workers in many countries who believed that the interests of workers in all lands are alike, and that they should unite on a world-wide basis with a view to protecting the interests of all workers in all countries.

Since the formation of the World Federation of Trade Unions, it has not functioned on a basis of benefit to the workers in their immediate problems. The WFTU has, instead, become a political agency, the chief function of which is to operate as a sounding-board for Russian political policies. It has not concerned itself with the practical problems of the workers. The main reason for this lack of attention to the workers' problems is that the unions in Russia and its satellite nations are nothing short of glorified state company unions, and have no other purpose in the international field than that of promoting the political interests of the Russian state. Where the unions of the West are free and able to challenge the policies of their respective governments, the Soviet unions, because of their state company status, are virtual prisoners of their government.

The World Federation of Trade Unions, is, therefore, comprised of one-half free unions, as representing the West, and the other half captive unions as representing Russia and its satellite nations. This cannot continue. The World Federation of Trade Unions is not a legitimate world trade union body, and cannot be until unions in all countries are free and able to challenge all governments in the interests of the people they represent.

Because of the aforesaid reasons, the Canadian Congress of Labour takes the position that, as constituted, the World Federation of Trade Unions should be abolished. The Congress calls upon the workers of all nations to assert their rights to be free as working men with a voice in determining their own affairs, and further declares itself ready to support a world trade-union body wherein the chief and principal qualification should be that the unions of all nations shall be free institutions, devoting themselves to the day-to-day welfare of the workers and the people of all lands.

Retirement income plan of E. B. Eddy Company

Although for many years the E. B. Eddy Company of Hull, Quebec, has granted, on a voluntary basis, retirement allowances to its employees, a more comprehensive plan was put into effect during the past year.

All regular employees are eligible to join the plan when they have completed five years of continuous service with the Company and have attained age 30. A full-time employee throughout the year is considered a regular employee for the purposes of the plan.

Employees are required to contribute four cents for each dollar of their *basic* salaries or wages and such contributions are not subject to income tax. It is estimated that "the total yearly future service contributions of the Company will be approximately the same as the yearly total of the employee contributions." In addition, the Company pays administration costs, and is providing contributions to cover the past service of employees prior to the introduction of the scheme.

The plan is administered by trustees under a Trust Agreement, executed between the Company and the trustees.

The normal age for retirement has been set at 65 years for men and 60 years for women, but provision is made in the plan for earlier retirement in cases of total disability or other special circumstances. Provision is made also for increasing the amount of a retirement income, if an employee desires to do so. In such a case the employee authorizes the Company to deduct an additional one per cent or two per cent from his earnings. Limited contributions may also be made for past services. Such contributions do not change the contributions made by the Company.

Benefit is calculated on the basis that an eligible employee will receive an annual retirement income, payable monthly, of one and one-half per cent of his total earnings from the date of his becoming a member of the plan to his normal retirement date.

Adjustment on a different basis is being made for employees with service before the commencement of the plan.

The plan contains certain provisions regarding beneficiaries of employees who die before retirement or before having received in retirement allowance an amount equal to their contributions; also concerning employees who leave the company's employ, and concerning alternative types of retirement income.

Employment, wages and prices in Britain in 1948

According to the United Kingdom Information Office, the number of persons in civilian employment in Britain in October, 1948, was 19,209,000 compared with 18,862,000 a year earlier.

Unemployment in November, 1948, stood at 328,000, one and a half per cent of the working population, compared with 282,000 a year earlier.

The index of wage rates at the end of November (June, 1947=100) had risen to 107 compared with 103 in November, 1947.

The cost-of-living index stood at 109 in November, 1948, compared with a figure of 103 a year earlier (June, 1947=100). "Wages and prices have thus kept fairly steady during 1948," the Information Office comments. "So far as the cost of living is concerned, there has been a fall of one point from the June peak of 110."

Industrial production in 1947 was about 8 per cent higher than pre-war, and in 1948 it was probably about 20 per cent higher than pre-war.

Exports in 1947 were 9 per cent greater by volume than in 1938. In 1948 (taking the figure for the first 11 months) they were 35 per cent above 1938.

Imports in 1947 were 23 per cent less by volume than in 1938. In 1948 (taking the figure for the first 9 months) they were 19 per cent less than in 1938. Imports in other words, have been kept down to about one-fifth less than pre-war.

Communism within British trade unions

Following up its previously announced campaign against Communism (L.G., Jan., 1949, p. 14), the General Council of the British Trades Union Congress recently sent a detailed statement of Communist methods to the executives of all affiliated unions.

"The Communist party openly acknowledges the existence of machinery it has built up inside the trade union movement," it says. "In its report to the annual conference of the Communist party early this year, the executive committee claimed that regular contact was maintained with leading comrades in industries and the professions through the work of separate advisory committees and the monthly meetings held after each meeting of the executive committee.

"These contacts have been built up with 'leading comrades' in the unions over a long period of years. . . ."

The statement describes the work of industrial committees which have been set up in the major industries with membership drawn from Communists inside unions. These committees meet regularly, and "are supplied with speakers' notes and other material produced at the party centre. It is one of the responsibilities of the general secretary of the party to issue from headquarters a weekly letter to the district secretaries and regional officers of the party, giving them instructions on decisions taken by the central committees of the party, particularly the political committee and other national committees. A weekly service of information is provided by the propaganda department.

"In delegate conferences of unions, union branches, and every other trade union meeting which it is possible for Communists to enter, speakers' notes, written questions and similar material are placed in the hands of the party's workers for the furtherance of the party's propaganda. In like manner resolutions on political questions, which have really nothing to do with the regular business of union branches, are circulated from the party centre to Communists and fellow-travellers in the branches to raise at their meetings. This wide network has been built up, as the TUC General Council emphasized in its statement on November 24, on the basis of co-operation with individual trade unionists. Not a few of these hold official positions in their unions. Without this co-operation the aims of the Communist organization cannot be effectively furthered, since the party centre, which directs the whole of these subversive activities, exists outside the trade union movement."

New labour bill proposed in U.S.A.

A bill providing for repeal of the Taft-Hartley Act and revival of the Wagner Act with a few amendments was put before a Committee of the United States Senate late in January. The bill was drafted under the supervision of the Secretary of Labour, Maurice J. Tobin, in accordance with instructions from President Truman.

One of the most important features of the new bill is the procedure it sets forth for handling "national emergency" disputes. The Taft-Hartley Act contains provision for court injunctions in such cases (L.G., May, 1948, p. 420). Under the bill, the President would issue a proclamation calling upon the parties to continue, or resume, work in the public interest. He would appoint an emergency board which would

make recommendations within twenty-five days for settling the dispute. The proclamation period would run an additional five days, unless extended by consent of both parties.

The bill says the parties "shall" observe the proclamation, but no actual enforcement methods are specified. Also, acceptance of the emergency board's findings would be voluntary.

The bill would also abolish such features of the Taft-Hartley Act as: (1) the ban on the closed shop and regulation of the union shop; (2) the requirements for the filing of non-Communist affidavits and union financial and other data; (3) the restriction on union welfare and retirement funds; (4) the limitations on union political activities; (5) the ban on foremen's collective bargaining rights; (6) the ban on strikes by government workers; (7) the prohibition of mass picketing; (8) the ban on excessive union initiation fees; (9) the guarantee to employers of freedom of speech to oppose unions; (10) the provision on rights of employers or others to sue unions; (11) the clause permitting decertification elections, and (12) the provision creating the office of general counsel independent of the NLRB.

In regard to state laws regulating the closed shop, the bill would provide that such laws are superseded in cases involving industries engaged in inter-state commerce.

While the new measure would outlaw certain "unjustifiable secondary boycotts" and jurisdictional disputes, it has no provision against secondary boycotts in support of better wages, hours and working conditions. The present law bans all secondary boycotts.

Essential Services Act in Victoria, Australia

The Emergency Services Act of the State of Victoria, Australia, proclaimed on November 15, prohibits strikes in essential industries without an official strike ballot first having been taken. The Act is intended to protect the community against interruption or dislocation of such essential services as transport, fuel, light, power, water, and sewerage.

The Act had been passed early in the year, and the Government proclaimed it when a bread strike in Melbourne was followed by a gas strike.

Two days after the proclamation, a number of unions staged a one-day protest strike. This strike was believed to be instigated by Communist union leaders.

The Melbourne Trades Hall Council repudiated the action of unions involved in the twenty-four hour stoppage by a vote of 142 to 89. The Council also condemned the State Government for its "hasty and ill-advised action," in proclaiming the Essential Services Act.

The Act provides that where a service is or is likely to be interrupted or dislocated, an emergency in relation to that service may be declared to exist, and the Minister may provide, operate, control, regulate and direct the service during the period of emergency.

Penalties are provided for taking part in a strike in an essential service without majority approval of the strike by a secret ballot, conducted by the Chief Electoral Officer. Provision is made for majority decision by secret ballot as to whether a strike shall continue. Lockouts in essential services are illegal.

**Indian
Employment
Service
deals with
obstruction**

A recent issue of *Employment News*, published by the Employment Service of India, indicates that the Service has evidently met strong opposition from labour contractors and jobbers who see it as a menace to their business. One article says, in part, that "the jobber must be made to know that the days of trafficking in human beings are gone, never to return. The Employment Exchanges have been instructed that

where they expect obstruction from middlemen and contractors, candidates should be sent to employers under the escort of a guide, or, if necessary, with an officer, so that the machinations of interested parties may not prevent their candidates reporting to the employer.

"Employers too have a responsibility in the matter. If they want the Employment Exchanges to serve them, they should create conditions under which these could operate efficiently and without obstruction."

The publication records placement during last August of 27,069 employment seekers, 649 of whom were women. The Employment Service has developed apprenticeship and vocational training. There is a program for disabled persons.

**Social
Welfare Act
of Eire**

Eire's Social Welfare Act, adopted in November, 1948, is described in the December issue of the *Bulletin* of the Interna-

tional Social Security Association.

The Act, which is a composite one, deals with seven of the services administered by the Department of Social Welfare. Of these, National Health Insurance, Unemployment Insurance, and Widows' and Orphans' (contributory) Pensions are contributory schemes; while Widows' and Orphans' (non-contributory) Pensions, Old Age Pensions, Blind Pensions and Unemployment Assistance are non-contributory.

NUMBERS OF WORKERS AFFECTED BY COLLECTIVE AGREEMENTS IN CANADA, 1947, BY INDUSTRY*

About one-third of the employed wage and salary earners in Canada in 1947 were employed under the provisions of a collective agreement. The number was about 12 per cent greater than in the previous year due in part to the inclusion of workers in establishments not previously operating under agreements and in part to higher employment.

In the year 1947, there were 1,185,551 workers employed under the terms of collective agreements in Canada, an increase of 11.7 per cent over the 1946 total number. Classified by industrial groups, the compilation shown in the accompanying table has been made from information supplied by employers in the annual survey of wage rates and hours of labour in Canada in 1947, supplemented by additional information from employers and from unions.

This is the second time such a compilation has been made; and the accompanying table thus contains comparable figures for 1946 and 1947. The figures for 1946 have been revised slightly since they were first published in the LABOUR GAZETTE for March, 1948.

The number of workers under agreement does not correspond to the union membership. In cases of closed and union shop agreements, all those affected are union

members, but under all other agreements non-union members are affected by the terms of the agreement as well as union members. Also, employees may be members of unions in some cases where no collective agreements have been made.

* A file of collective agreements has been maintained in the Department of Labour for many years and summaries of representative agreements are published each month in the LABOUR GAZETTE. The Research and Statistics Branch makes analytical studies of current agreements on file, by industry and by topic. Seven of these studies have been made covering: the Pulp and Paper Industry; the Manufacture of Iron and Steel and their Products; the Manufacture of Non-Ferrous Metal Products, Non Metallic Mineral Products and Chemical Products; the Coal Mining Industry; the Fishing Industry; Numbers of Workers Affected by Collective Agreements in Canada, 1946 by Industry; Extent of Collective Bargaining between Unions and Employers' Associations or Groups. These have been published in previous issues and have also been printed as separate bulletins. Copies of most of these bulletins are available, on request.

TRADE UNION MEMBERSHIP AND WORKERS COVERED BY COLLECTIVE AGREEMENTS IN CANADA

Actual union membership in Canada was 912,124, in 1947 and 831,697 in 1946 (L.G., Nov., 1948, p. 1226).

The total number of wage-earners and salaried workers employed at November 8, 1947, was 3,334,000, as estimated by the Dominion Bureau of Statistics (based on a one per cent sample of the population and therefore subject to sampling error). The percentage of employed workers affected by agreements in all industries in 1947, therefore, was 35.6. By main industrial groups, the percentages were: Agriculture—nil; Forestry, Fishing, Trapping—44.7; Mining—71.2; Manufacturing—50.4; Electricity and Gas—49.6; Transportation and Communication—75.2; Trade—5.2; Finance and Insurance—nil; Service—8.2.

The increase in the number of workers covered by agreements in 1947 compared with the previous year, was due partially to higher employment, as indicated by official figures, as well as to the fact that many additional agreements were signed to include workers in establishments not previously operating under agreements. The more important changes are noted below.

In the logging industry, agreements were in force only in British Columbia and Northwestern Ontario. The increase in the numbers covered was due to higher employment. In coal mining, the decline in the numbers under agreement was due to somewhat lower employment in the industry. In metal mining, a decrease was recorded in the number under agreement while total employment was higher than in 1946. This decrease was due to the fact that a number of agreements in force in 1946 were no longer in effect in 1947.

Among manufacturing industries, the more important increases due to higher employment in the establishments covered were pulp and paper, automobile manufacturing and shipbuilding. In certain other industries in this group, however, the increase was due mainly to additional establishments being covered by agreements. These are: primary textiles and a number of metal products industries. Increases in cartage and trucking and in trade are largely accounted for by new agreements in these industries.

The table includes not only agreements between employers and national and international unions but also those in which the workers were represented by independent local unions, associations of employees or plant councils, whose membership was confined to the employees of one company and which were not affiliated with any central labour organization. The total number of workers under agreement who are represented by such employees' associations,

plant councils and unions not affiliated with any national or international labour organization was 91,835 or 7.8 per cent of the total number of workers affected by all agreements.

The table shows in the second and fourth columns the number of workers affected by agreements extended under the Collective Agreement Act of the Province of Quebec. Under this Act, the terms of agreements made between a number of employers and a union or unions may, under certain conditions, be extended by provincial Order in Council to apply to all employers and workers in the industry in the zone affected, or even to the whole province. A number of the agreements made in the province of Quebec have been so extended, notably in the construction industry, the boot and shoe, fur, clothing, printing, garages and service station industries. The figures as to the number affected are those issued by the provincial government. In some cases more complete union agreements, dealing with union security and other clauses not covered by the Act, exist in the same industry and are therefore included in the first two columns of each year in the table. However, any duplication is eliminated in the third and sixth, or "total" columns.

The number of workers affected by agreements was obtained in almost all cases from reports from employers. An exception is the construction industry. In this industry no survey of employers was made in 1946 and for that year, for agreements outside the province of Quebec, an estimate was made from the membership of those local unions whose agreements were on file. For 1947, information from builders' exchanges, individual employers and local unions was used. Other exceptions are union agreements signed by a number of employers with very small numbers of workers, from which employers no reports were received. In these cases the union's estimate was used.

In addition to the agreements made between one employer and one union for one establishment, there are: agreements between one employer and one union for a number of establishments in different localities, e.g., meatpacking companies; separate agreements between one employer and a number of unions, e.g., certain pulp and paper companies; agreements between an association or a number of employers and one union, e.g., in the clothing manufacturing industry. The number of agreements, therefore, does not correspond to the number of establishments affected by agreements. There were approximately 3,400 collective agreements in effect in the year 1947.

NUMBERS OF WORKERS AFFECTED BY COLLECTIVE AGREEMENTS IN CANADA, 1946 AND 1947, BY INDUSTRY

| Industry group | 1946 | | | 1947 | | |
|--|---|---|-------------------------|---|---|-------------------------|
| | Agree- ments (other than those extended under Col- lective Agree- ment Act, Quebec) | Agree- ments extended under Col- lective Agree- ment Act, Quebec | Total (a) | Agree- ments (other than those extended under Col- lective Agree- ment Act, Quebec) | Agree- ments extended under Col- lective Agree- ment Act, Quebec | Total (a) |
| | Number of workers | Number of workers | Number of workers | Number of workers | Number of workers | Number of workers |

(a) These totals are not the sum of the numbers in the other two columns. Duplications are eliminated.

(b) Revised.

(c) This agreement, for the building materials industry in the province of Quebec, is included under "Manufacturing" but also covers granite quarrying. Information not available as to the number in each industry.

(d) Agreements affecting workers in garages and service stations, in the province of Quebec, included under "Manufacturing" also affect "Trade" in so far as service stations are concerned. Information not available as to the number in each industry.

(e) Petroleum marketing plants employees originally in "Manufacturing", transferred to "Trade" in revision.

(f) Water supply covered under "Service—Public".

(g) Estimated. See text.

(h) One agreement for several towns in Quebec included under "Trade" also includes employees of financial institutions.

(i) An agreement is in effect for truck drivers, helpers, warehousemen, etc. in Montreal, for which the number of workers is not available.

(j) Agreements for building workers extended under the Collective Agreement Act, Quebec, include maintenance work and certain shop work which is not included in the construction industry in the Dominion Bureau of Statistics classification.

INTERNATIONAL LABOUR ORGANIZATION

Second Session of Petroleum Committee, Geneva, November 10-19, 1948

In view of the vast expansion which the world petroleum industry is at present undergoing, special attention was given by the ILO Petroleum Committee to the subject of recruitment and training. Other matters discussed included safety, industrial relations, and the 40-hour week.

At the Second Session of the ILO Petroleum Committee, held at Geneva from November 10 to 19, 1948, representatives of the employers, workers and governments of a dozen important oil countries met to discuss labour conditions in the oil industry.

The principal items on the agenda were recruitment and training, safety, and industrial relations. Other matters discussed included the 40-hour week, rest periods, and minimum wages.

The following countries sent delegations: Canada, Colombia, Egypt, United States of America, France, Iraq (government delegate only), Iran, Mexico, Netherlands, Peru, United Kingdom, Venezuela. There were also two observers representing the Government of Brazil.

Dr. Luis Alvarado, Peruvian Ambassador to France, and Chairman of the Governing Body of the ILO, was chairman of this session of the Committee.

The Canadian delegation was made up as follows:—

Government Delegates.—Mr. G. E. Nixon, M.P. (Algoma West), Sault Ste. Marie, Ontario; Mr. Ronald H. Hooper, Industrial Relations Officer, Department of Labour, Winnipeg, Manitoba.

Employers' Delegates.—Mr. W. Yalden-Thomson, Co-ordinator of Labour Relations, Imperial Oil Company Ltd., Toronto, Ontario; Mr. R. F. Hinton, Industrial Relations and Personnel Manager, Shell Oil Company of Canada, Ltd., Toronto, Ontario.

Workers' Delegates.—Mr. D. J. Buchanan, Toronto District Labour Council, Trades and Labour Congress of Canada, Toronto, Ontario; Mr. Elroy Robson, Representative of the Canadian Congress of Labour, Ottawa, Ontario.

Four reports had been prepared by the ILO in advance of the meeting, the first

of which dealt with the industry in general and the others with the three technical items on the agenda.

The Committee debated the General Report in plenary session, and appointed subcommittees to deal with the other three questions.

The Petroleum Industry

The most striking feature of the petroleum industry at the present time, as indicated in the General Report, is the rapid expansion it is undergoing.

"There was an enormous consumption of oil and oil products during the war itself, and the consequent running down of stocks has accentuated present shortages. . . . Post-war reconstruction programs have added to the demand for oil and its products, as for other sources of power. Finally, there has been a considerable increase in population."

It is therefore anticipated that "the next few years will see an unprecedented increase in world capacity for production, refining, transport and distribution of petroleum. . . . The objective is to double pre-war world petroleum output in the course of four or five years."

Of particular importance to the world situation is the position of the United States. In that country, which is by far the biggest consumer in the world, demand has begun to exceed the domestic capacity to produce. The United States is therefore increasing its imports of raw petroleum; and while its vast refining capacity will enable it to continue to send refined oil abroad, its exports are expected to decline.

The eastern hemisphere must therefore "look increasingly to the development of its own petroleum resources for the satisfaction of its needs." In this connection, a limiting factor in obtaining the equipment necessary for expansion of the

industry is the steel bottleneck, as well as shortages of certain other materials.

The Report notes the implications for labour of the anticipated expansion, stating that it will mean "the employment of a greater number of manual and non-manual workers, the rapid training of additional skilled personnel, the improvement of industrial safety equipment, an effort to improve and consolidate industrial relations, and the establishment of welfare and related services, particularly in under-developed regions—precisely those in which the greatest expansion of the industry is likely to take place."

Recruitment and Training

Little difficulty is experienced in recruiting manpower for the petroleum industry in general, according to the Office report on *Recruitment and Training*, since "high wages, reasonable working hours and good conditions of work attract many workers."

However, since the industry requires a considerable proportion of skilled workers, there is a need for well-developed training facilities. For some positions in the industry the educational as well as the technical qualifications are important.

Training schemes are stated to be less developed for drilling work than for refining work. "This can be explained by the fact that when a new oilfield is discovered, the drilling phase is over relatively rapidly: it is easier, therefore, to employ mobile crews who can be moved from place to place as the need arises than to train men on the spot for this highly specialized type of work, since the men might not be able to use the skills so acquired after the drilling phase is completed and normal exploitation has begun.

"Refining plants, on the contrary, are installed more or less permanently and offer a wide variety of jobs for which it is worth while to train locally recruited workers, since the qualifications they acquire can continue to be used locally year after year."

A problem arises in regard to general education, in that the petroleum industry is frequently located in areas remote from urban centres, and consequently from existing schools. "In the more developed countries," the report states, "there is no real problem: as a rule, general education has been compulsory for all children for some decades, many schools exist, and where new schools should be built, the State is in a position to finance their erection. Where it is uneconomical to build special schools in remote centres, because

of the small number of children who would attend them, transport facilities have been provided to bring children to existing schools. . . .

"In many cases . . . the petroleum companies themselves have set up schools or made transport facilities available to the children of the workers they employ." Scholarships are also granted in some instances.

"The main problem," the report concludes, "... is the need for the wider extension of such education."

Following a debate on the subject of general education in the industry the Subcommittee on Recruitment and Training adopted unanimously a resolution which called attention to the progress which had already been made, and stated further that:—

Public authorities and petroleum companies should maintain and accentuate their joint efforts with a view to providing the children of the workers in the petroleum industry with a general basic education particularly in those areas where inadequate action by public authorities or private initiative has failed to reach this objective because of geographical conditions.

In a separate resolution the Subcommittee recommended a continuing development of technical training and apprenticeship programs.

This second resolution also indicated a line of action for the International Labour Office. The Subcommittee felt that the Office might act as a clearing house for information concerning training programs and methods in use in the different countries. It might also endeavour to work out an adequate system of job classification for the petroleum industry.

The resolution advocated, as a further means of improving the calibre of workers in the industry, the sending abroad of selected workers for training. The international exchange of trained workers, especially supervisors, was also commended as a means of spreading the application of up-to-date training and technical practices. The Office was asked to help in this work by co-ordinating, where necessary, programs set up by industry.

Mr. Robson, the Canadian workers' member on the Subcommittee, urged the Subcommittee to consider not only the question of general basic education and vocational training but also the desirability of providing training in regard to the moral responsibilities of employers and workers. This training, Mr. Robson claimed, should be aimed at improving human relations in the undertaking, and at bringing about a

willingness to make decisions on the basis of what is right for all concerned, and the ability to make team-work the normal practice in industry. Sound moral standards, he insisted, were a basic requisite for both employers and employees and constituted the best security for both. Mr. Robson introduced a resolution along these lines which received unanimous endorsement.

Dealing with recruitment, the Subcommittee noted in another resolution that owing to good conditions of work in the industry little difficulty was being experienced in obtaining workers. It called attention to the desirability of giving preference in recruitment and promotion to workers residing in the country concerned.

In all, four resolutions were adopted unanimously by the Subcommittee, and later by the Petroleum Committee itself in plenary session.

Safety

The Office report on *Safety in the Petroleum Industry* cites the risks that exist for workers in the petroleum industry, as follows:—

“Workers in the petroleum industry are exposed to the hazards common to all industrial workers. Moving machinery, the handling of bulky objects such as pipes for example, and falling objects, present the same dangers in this industry as in all others.

“There are, however, a number of risks peculiar to the production and refining of petroleum.

“The principal and most common risks on oilfields are those of fire, explosion and asphyxiation. It is of primary importance, for example, to locate the boilers so as to make it impossible for a ‘flareback’ to set fire to storage tanks or any flammable material on the field. The direction of the prevailing wind must also be taken into account, not only from the point of view of fire prevention, but also to eliminate the danger of asphyxiation by hydrogen sulphide fumes.

“Serious accidents may also result from the collapse of derricks and from the explosion of the wells due to insufficient control of the oil pressure.

“Workers constructing derricks or working on the platforms or crown boards of derricks already in operation are exposed to the risk of falling.

“Because of the great number of pipes and other obstacles on oilfields, the transportation of workers to and from their places of work presents a certain risk.

“In refineries, the risks are largely those of fire, explosion and asphyxiation.”

Dealing with accident prevention, the report says: “In the petroleum industry, as in all industry, safety depends largely on three factors: the existence of specific accident prevention regulations; the proper functioning of machinery for the enforcement of such regulations; and close co-operation between official bodies, employers and workers in safety matters.”

In a survey of the law and practice in the member countries, the report states that in general, the safety legislation enacted in the various countries covers all industries, including the petroleum industry. Some countries have, however, passed specific laws or regulations dealing with the protection of workers engaged in the production and refining of petroleum.

(In Canada, the report notes, refineries are subject to the Factories Acts of the various provinces, while under the Alberta Factories Act, oil and gas well-drilling plants and rigs, oil refineries and production tank farms are “factories”, and regulations have been issued under the Act governing the drilling, cleaning, repairing, operation and maintenance of oil and gas well-drilling plants, rigs and equipment.)

The Subcommittee on Safety, following a discussion of safety measures, adopted one resolution dealing with the principles of accident prevention, and a second resolution calling for the creation of studies dealing in specific detail with safety practices in the various branches of the petroleum industry.

The first resolution “noted with satisfaction” the work already being done by the petroleum industry, by such measures as codes of safety rules and administrative procedures, and called for their further development wherever the need exists.

As a means of securing the best co-operation of workers the resolution advocated:—

- (i) safety indoctrination courses for men and newly engaged in any branch of the industry where safety precautions are necessary (through lectures, discussions, films and other visual aids, etc.);
- (ii) the instruction and training of supervisors and workers in safe working procedures and methods, including the proper use of personal protective equipment (by means similar to those mentioned in (i));
- (iii) the organization of first-aid training programs for supervisors and workers as a means of helping to mitigate the effects of accidents and of promoting safety-mindedness through realization of their possible consequences;

- (iv) the encouragement of joint safety advisory committees or similar bodies for the purpose of making inspections of installations and equipment, watching the application of safety measures and making recommendations to the management concerning the improvement of these measures.

The second resolution invited the Governing Body to set up a Committee of Experts, in collaboration with which the ILO would prepare monographs on safety practices in the petroleum industry, and make recommendations as to whether a Draft Model Code of Safety Practices for the industry was desirable.

These two resolutions were adopted unanimously by both the Subcommittee and the full Committee.

Industrial Relations

The Office report on *Industrial Relations* outlines the development of trade union organization, collective bargaining, and methods for the settlement of disputes in the petroleum industry. It notes that in regard to the establishment and recognition of trade unions in the petroleum industry, "it is clear that there is room for further development."

"In the industrial countries of North America and Europe there is a degree of organization comparable to that of most other industries in those countries. It is in the industrially under-developed countries that the greatest scope for improvement is offered. Even in these countries, however, oil workers' organizations are being built up, and it is interesting to note that in some of these countries the oil workers are in the van of the trade union movement as a whole. In countries in which the trade union movement is in its infancy, the problem is not merely one of increasing the number of trade union members, but of developing the sense of responsibility and the understanding of industrial problems which the older unions have been able to acquire."

The whole question of industrial relations is currently before the International Labour Conference. In consideration of this fact, the Subcommittee on Industrial Relations indicated its views that the principles of industrial relations should **not** be applied in any special way in the petroleum industry as distinct from other industries, but that the petroleum industry should be included on the same footing as all others in the scope of the discussions and decisions being taken by the Conference.

However, the Subcommittee worked out and adopted unanimously a statement of its views on the principles of industrial relations.

During the proceedings of the Subcommittee, certain of the workers' delegates from France, Egypt and Iran argued in favour of legislation to compel the setting up of works committees and to provide for compulsory arbitration. This was opposed by Mr. Hooper, Canadian Government Delegate, who outlined past and present Canadian legislation covering conciliation and stated that its success during nearly half a century had been very largely due to its voluntary features.

This position was supported by the other Canadian delegates on the Subcommittee, Messrs. Yalden-Thomson and Buchanan, who claimed that once union recognition had been achieved the voluntary system of co-operation was preferable. Delegates from the United Kingdom and the United States took a similar stand, and the text which was adopted favoured the inclusion in collective agreements of machinery for consultation and co-operation on a voluntary basis.

40-Hour Week

At the closing sitting of the Petroleum Committee a resolution was introduced by the workers' group stating that a 40-hour week in the petroleum industry was "a desirable goal" and asking all countries to strive for the achievement.

This subject had been on the Committee's agenda at its first session, at which time no agreement was reached, except to ask the Office to prepare information on the subject.

Part of the Office's *General Report* consisted of a study of hours of work in the petroleum industry. One of the features brought out in this study was that continuous operation is a characteristic of most processes in the industry. "The work must be so organized as to ensure not only the necessary continuity, but also work schedules (total hours, daily rest, weekly rest) in accordance with essential standards of welfare."

The 40-hour week is established in practice in the United States, and, the report adds, "in view of the magnitude of the American petroleum industry it may be said that the majority of persons employed in the industry throughout the world are covered by the forty-hour system." The 40-hour week is also in effect

in a number of Canadian establishments, but elsewhere, weekly hours of work generally exceed 40.

The resolution was carried by 29 votes to 20, with 8 abstentions. The Canadian Government and Workers' delegates supported the resolution.

Other Resolutions

A resolution on rest periods was unanimously adopted. This resolution stressed the desirability of at least one 24-hour rest period per week for all workers, to be granted where possible on the weekly religious holiday of the country concerned.

Another resolution reaffirmed the prin-

ciple of minimum wage rates for the industry, adopted at the Committee's first session, and invited the Governing Body to seek information from the Governments concerned as to their attitude towards it.

Among the other resolutions was one asking that the Office be instructed by the Governing Body to study the social problems of the industry (such as housing, health, sports, education) with a view to the inclusion of some of these items on the agenda of the Committee's next session.

The proceedings and resolutions of the Petroleum Committee will be examined by the Governing Body of the ILO at its next session.

Ratification of Conventions Now Exceed 1,000

The total number of ratifications of Conventions adopted by the International Labour Organization passed 1,000 recently with the deposit by France of formal instruments of ratification of ten Conventions.

With the deposit of the French ratifications, the total reached 1,004. The ratifications were of two 1936 Conventions and eight adopted in 1946, all of which set standards governing the employment conditions of seafarers.

Shortly before France's action, Poland deposited the ratifications of nine Conventions, dealing with social security.

The ILO has adopted 90 Conventions since its establishment in 1919. These Conventions, together with the 83 formal Recommendations adopted by the Organization to date, constitute what has become known as the International Labour Code.

The Code is one of the principal means by which the ILO has sought to achieve its constitutional objective of providing the basis for lasting and universal peace by furthering social justice throughout the world.

The Code embraces almost every aspect of social policy. It establishes international minimum standards covering such questions as hours of work, a weekly day of rest, paid holidays, protection of women and young workers, the employment conditions of seafarers, social insurance of all kinds, industrial safety and hygiene, working standards in non-metropolitan territories, the working conditions of agricultural labour, the use of white lead in painting, the conditions of immigrant workers, wages and wage-fixing machinery, employment services, unemployment benefits, labour inspection, and freedom of association and protection of the right to organize.

LEGISLATIVE PROPOSALS OF PROVINCIAL LABOUR ORGANIZATIONS

Proposals in regard to provincial labour standards were set forth recently by a number of provincial labour groups in their annual presentations to their governments. Outlawing of company unions, and granting of collective bargaining rights to Crown employees were sought in several provinces. In regard to workmen's compensation, there were proposals for payment at 100 per cent of earnings, payment from the day of the accident, increased coverage, and higher allowances for dependents. Two weeks' vacation with pay, a 40-hour week, higher minimum wages, and higher old age pensions were also commonly sought. Summarized below are the briefs of five provincial organizations, affiliated with the Trades and Labour Congress of Canada, in Alberta, British Columbia, Manitoba, Quebec and Saskatchewan.

Alberta Federation of Labour (TLC)

The Executive Council of the Alberta Federation of Labour made its annual presentation of legislative proposals to Premier E. C. Manning and members of his Cabinet early in January. The proposals were based upon decisions reached at the annual convention of the Federation, held in the city of Calgary in November, 1948. At that convention, 135 delegates were in attendance, representing 105 Alberta labour organizations having over 13,000 members.

The legislative program suggested by the Executive was confined mainly to matters of direct interest to organized labour, and included collective bargaining, factory inspection, wages and hours of work, industrial standards, apprenticeship regulations, social security and workmen's compensation.

Collective Bargaining

Considerable emphasis was placed on the certification of unions in relation to collective bargaining. In the opinion of the Executive, "more control must be exercised in the granting of certifications." It was felt that unions should be properly organized before they apply for the right to act as bargaining agent. "Inquiry should be made as to whether the applicant union has a charter, has a *bona fide* membership and so on." It was urged that the Labour Act be amended to provide that from the date of application of any union for certification until union negotiations have been

completed, an employer shall not be allowed to dismiss any employee without the consent of the Board of Industrial Relations.

Another suggestion, more particularly applicable to the building trades unions, dealt with the procedure followed in connection with conciliation and arbitration proceedings. It was proposed that conciliation commissioners should meet with the parties to a dispute separately before any joint meetings have been held "so that a clear understanding would be had of the problems of both sides." In addition, the parties to a dispute should be required to state "in writing what they are prepared to offer." Then too, it was suggested that the Act be amended "to provide that decisions of Boards of Arbitration would have to be implemented within 14 days of their being rendered" and be made retroactive to the date of application for the appointment of a conciliation commissioner.

The delegation was careful to point out however, the distinction it made between "compulsory implementation" and "compulsory acceptance," so as to avoid giving the impression that the Federation favoured "compulsory acceptance of arbitration decisions." The 14-day period, already provided in the Act, would provide time for a strike vote or a lockout vote. It was suggested that any change in the decision of a Board should be made only by mutual consent of both parties affected by the decision.

The delegation requested that the penalty sections of the Labour Act of Alberta be dropped. At the same time, it was suggested that a section be placed in the Act similar to one that is in the corresponding Dominion legislation, which is designed "to protect the pension credits and other accumulated benefits of an employee who goes on a legal stoppage of work."

Concerning union security, the delegation asked that if two-thirds of the employees of any employer requested union shop provisions, then such provisions should be included in any union agreement covering that place of employment.

Board of Industrial Relations

The delegation asserted that the Board of Industrial Relations was inadequately staffed and that more inspectors should be employed. It was suggested, too, that "more Government officials should be trained in conciliation work, so that no delay will take place in the handling of disputes."

Factory Inspection

In the opinion of the Federation, the Factory Inspection Branch was not adequately staffed, so that inspections could be made oftener. Then too, "factory inspectors should be instructed to meet with safety committees while making their inspections."

Wages

The delegation asserted that "on the present cost-of-living index an average family should have an income of \$44.60 a week to maintain a proper Canadian average standard of living. On this basis the minimum hourly wage rate of the province of Alberta should be around 90 cents an hour." It was stated, however, that the convention of the Federation had adopted resolutions asking that "the male minimum wage rate in the province should be set at 75 cents an hour. The delegation urged that the Government give serious consideration to the establishment of such a minimum rate.

In the matter of female minimum wages, it was suggested that the rate for the first week of employment be \$18, to be increased by two dollars per week for the second and third week and thereafter to be \$24 per week.

Hours of Work

The claim was made by the delegation that "the production of manpower has

increased to such an extent that the answer to full employment is a reduction of the hours of employment." The Government was urged to "seriously consider the reduction of the maximum hours of work in this province."

Apprenticeship Regulations

It was suggested that the apprenticeship regulations, specifically in the building trades, be amended so as to assure apprentices that they may complete their training without the "many interruptions" to which, it was claimed, they have been subjected. Similarly, it was suggested that it be made compulsory for employers "to abide by the conditions of employment set out for apprentices." It was alleged that "many employers are now hiring workers and calling them 'helpers' instead of 'apprentices' so that they can get around the provisions of the Apprenticeship Act and regulations."

Social Security

The delegation urged the Government to give its fullest support to the proposal that an over-all contributory social security plan be set up for Canada.

Workmen's Compensation

The Government was commended for the amendments made in the Workmen's Compensation Act in 1948 and also for the adoption of the "Blind Workmen's Compensation Act." However, the following further changes were asked for:—

- (1) one hundred per cent compensation;
- (2) payment from the first day of an accident;
- (3) increase in pensions to \$60 per month for widows and \$17.50 per month for children;
- (4) an increase in the amount allowed for burial to \$250;
- (5) compensation coverage for "certain occupational diseases, particularly kidney ailments;"
- (6) more stringent safety regulations and inspection;
- (7) making the holding of inquests compulsory in fatal industrial accidents.

Miscellaneous Requests

It was suggested: (1) that the definition of "child" used in both the Alberta Labour Act and the School Attendance Act be, "any person under the full age of 16 years;" (2) that a larger provincial grant be made to the University of Alberta, "so that students will not be too heavily burdened with this cost," and that a branch of the university be established in Calgary; (3) that an annual grant be made to the

Department of Industries and Labour "for labour education;" (4) that unemployment insurance coverage be provided for seasonal employees of certain departments of the provincial government; (5) that a more progressive program for rural electrification be undertaken; (6) that a more comprehensive system of licensing chauffeurs be

provided for; (7) that motor vehicles be required to carry flares, or some other safety device, for emergency use on highways; (8) that diesel-electric railway units be painted a bright colour "so that they will be seen more easily;" (9) that only certified engineers be permitted to operate steam boilers of 20 horse-power or over.

British Columbia Executive Committee (TLC)

On January 7, 1949, members of the British Columbia Executive Committee of the Trades and Labour Congress of Canada presented a brief to Premier Byron Johnson and members of his Cabinet recommending several amendments in provincial legislation of direct concern to organized labour in the province.

The delegation was led by Birt Showler, Vice-President of the TLC; R. K. Gervin, Chairman, B.C. Executive Committee, and J. Stevenson, C. A. Peck, and W. H. Sands, members of the Executive Committee.

The decisions reached by the provincial TLC convention held early in December with respect to lack of housing, insufficient pensions for the aged and widows on compensation, workers' compensation, the Hours of Work Act, annual vacations with pay and other matters were presented to the Government.

Industrial Conciliation and Arbitration Act

It was pointed out that "uppermost in the minds of all the delegates (at the convention) was the inability of the Industrial Conciliation and Arbitration Act to meet the needs of labour and industry in this province." It was urged that it should be given special attention this year, and some 18 specific amendments were recommended, among them the following:—

Clearer definitions in the Act for the words "employee" and "unit." It was held that the present definition of "employee" was too loose and excluded too many workers. The definition of "unit," instead of being restricted to "a group of employees" should, it was claimed, mean "one or more employees."

All workers should, it was asserted, be included under the Act. Specifically mentioned were civic, municipal and provincial employees. It was urged that company unions should be outlawed and only *bona fide* trade unions certified.

The Executive asked that all awards made by Conciliation Boards be made retroactive (a) in the case of first agreements, to the date of application to the Board; (b) in the case of renewals, to the date of expiry of the preceding agreement.

Changes were suggested in the procedure to be followed in taking strike votes with a view to giving the unions more control in such cases, in accordance with provisions contained in the constitutions of most labour organizations. It was claimed too, that only legitimate trade union members should be permitted to vote on questions relating to strikes.

It was urged (a) that a union should not become a legal entity; (b) that legal representation, either on Conciliation Boards, or in the presentation of cases before such Boards should be forbidden.

Other recommendations involved the deletion of several specific sections or subsections of the Act so as to remove features held to restrict or infringe upon rights claimed by organized labour.

Trade Union Act

It was requested that provision be made in the Trade Union Act that would prevent any British Columbia court from issuing restraining orders and temporary or permanent injunctions in cases involving labour disputes, except in cases where unlawful acts were sanctioned by trade union officials, authorized agents, or committees of trade unions, directly engaged in the dispute.

Workmen's Compensation Act

The following amendments were recommended to the Workmen's Compensation Act, (1) that compensation payments be increased to 100 per cent of earnings, with a minimum payment of \$20 per week guaranteed during incapacity; (2) that coverage be provided for all workers; that in cases of partial recovery, injured workers be

guaranteed full compensation until satisfactory employment is found for them, thus eliminating the practice of referring partially disabled workers to light work; and that in addition, any loss in wages resulting from being forced into light employment should be made up by the industry in which the worker was employed at the time of his accident; (3) that in the event of the death of an unmarried or widower workman, who has no dependents, the employer be required to pay funeral expenses and, in addition, pay \$1,000 into the rehabilitation fund; (4) that widows of fatally injured workmen be paid \$80 per month, and that allowances to children under 18 years be \$17.50 per month; this increase to apply to all such present pensioners under the Act; (5) that qualified chiropractic and naturopathic treatment be made available to workers without recommendation from a medical doctor; (6) that the limits of annual earnings from which compensation is paid be raised from \$2,500 to \$3,500.

The Government was urged to give consideration to setting up a central hospital under the Workmen's Compensation Act to care for victims of industrial accidents, more particularly to provide care for injured workmen in outlying districts.

Old Age Pensions

It was suggested that the Government guarantee senior citizens a minimum of \$60 per month at 60 years of age without the means' test.

Manitoba Executive Committee (TLC)

Representatives of the Manitoba Executive Committee of the Trades and Labour Congress of Canada and of the Trades and Labour Councils of Winnipeg, Brandon and Flin Flon, presented a memorandum of proposed legislation to Premier Douglas L. Campbell and members of his Cabinet in January. The delegation was led by Chairman G. Wilkinson of the Provincial Executive.

In his introductory remarks, Mr. Wilkinson expressed the satisfaction felt by organized labour that the annual presentations of legislative proposals in each of the provinces "are being received and implemented with a true recognition of their worth."

Social Security

The Federal Government was commended for its announced intention of enacting legislation to provide an over-all social security plan on a contributory basis. The

Other Recommendations

Other recommendations of the Executive included:—

(1) the taking over and operating by the Government of the automobile insurance business;

(2) the reduction of hours of work from 44 to 40 hours per week, including workers in agriculture, horticulture, domestic service and ambulance drivers;

(3) the setting of the minimum wage in the province at 75 cents per hour;

(4) two weeks' vacation with pay for all workers, employers to contribute an amount equal to four per cent of their employees' wages to provide funds for workers' vacations;

(5) improvement in standards of electric wiring and more adequate inspection of electrical installations;

(6) the taking of steps, with or without Federal aid, to provide low rental housing;

(7) provision for more efficient and effective inspection of boiler installations;

(8) setting up a system for the examination and licensing of plumbers and steam fitters and the establishment of a provincial plumbing code to regulate the installation of sanitary equipment;

(9) the enactment of legislation requiring the installation of sprinkler systems in public and private schools, hospitals and other public buildings.

Manitoba Government was urged "to give all possible assistance towards bringing this much needed legislation into effect immediately." It was suggested that the plan should provide health, accident and hospitalization benefits, old age pensions, mothers' and widows' allowances, financial assistance for the building of hospitals and the organization necessary "to guarantee to every person the maximum medical, surgical and dental benefits." It was requested that labour be given representation on all hospital boards and that every person have free choice of professional services.

Old Age Pensions

The Provincial Government was asked to recommend the enactment of a Federal Old Age Pension Act to consolidate all existing old age pension schemes under a Federal Board composed of representatives of government, management and labour. All Canadian citizens should be required

to contribute the necessary funds, either through pay deductions or special assessments along the same lines as are operative under the Unemployment Insurance Act. Pending the enactment of the necessary legislation by the Federal Government to provide these services, the Government of Manitoba was asked to increase pensions to the aged, the blind and the disabled, by ten dollars per month.

Workmen's Compensation Act

The delegation commended the Government for certain amendments to the Workmen's Compensation Act in 1948, but enumerated several other features that were considered "necessary to maintain decent living standards for persons who may come under the Act." These features were: (a) one hundred per cent compensation; (b) blanket coverage of all occupational diseases, or diseases attributable to the nature of the employment; (c) compensation to be paid from the date of injury or disability, without a waiting period; (d) placing the supervision of industrial accident prevention measures under the Compensation Board; (e) upward revision of pensions paid to disabled persons, and widows' and children's allowances paid under the Act; (f) provision for revision of the Act at least every two years.

Labour Relations Act

While approving, in the main, the action of the Legislative Assembly in 1948, in "implementing practically all of the proposed Dominion Act," the delegation pointed out "some features" in the Labour Relations Act which they believed were "detrimental to its fair administration."

Clauses in the Act, that it was claimed, should be deleted, included: (1) Clause 6 of section 9 which forbids the certification of municipal police unions, if they are in any way associated with provincial, national, or international trade unions; (2) Clause 2, section 21, which states that "no member of a municipal police force shall strike." It was suggested that Section 55 of the Act should be amended or deleted. This clause exempts from the provisions of the Act the provincial government and its employees, including all government boards, commissions, agencies, etc., and their employees.

Other amendments suggested in the Act would (a) permit a member of the Legislative Assembly, while acting as a member of a Conciliation Board, to accept reimbursement from the Government for expenses incurred in connection with his

duties on the Board, without disqualifying him as a member of the Assembly; (b) require extra-provincial companies to appoint representatives residing in the province who would have authority to bargain collectively and to conclude collective agreements that would be binding on such companies; (c) assure that there will be "no loss of seniority or service rights owing to a legitimate strike or lockout;" (d) require the Manitoba Labour Relations Board to proceed with prosecutions to which it had given its consent under the Act; (e) prohibit employers to change rates of wages pending renewal or revision of collective agreements, without the consent by, or on behalf of the employees affected.

Housing

It was urged that the federal, provincial and municipal governments co-operate in a nation-wide low-rental home building program, financed by national credit and that the strictest control possible be maintained on rents.

Income Tax

The provincial government was asked to urge upon the Federal Government to raise the minimum exemption on personal income taxes to \$1,200 for single persons, and to \$2,400 for married persons, and that the exemptions for each dependent be set at \$400.

Holidays with Pay

The delegation requested that legislation be provided to extend annual holidays with pay to two weeks and that the stamp credit system be expanded to include all workers in the province.

Other Legislative Proposals

Among other recommendations, the delegation asked (1) that the schedules of the Minimum Wage Act be amended immediately to raise the minimum wage to 65 cents per hour in the southern portion of the province and 15 per cent more in areas north of the 53rd parallel; (2) that, regardless of sex, the principle of equal pay for equal work should apply; (3) that the provincial government take over and control all automotive insurance in the province; (4) that operators of motor vehicles be required to undergo examinations annually to prove their efficiency, before operating licences are granted to them; (5) that definite regulations be set up to prevent overcrowding of buses; (6) that rigid

control of the natural resources of the province, particularly the forests, be maintained by the provincial government; (7) that the federal government be urged to grant subsidies on basic food commodities and enforce a reduction in consumer prices; (8) that a 100 per cent excess profits tax be imposed and a Federal Price Control Board be set up to review applications for

price increases; (9) that labour be given representation on "Boards dealing with matters which affect all people of the province;" (10) that the compulsory school attendance age be raised to 16 years for the present, with the prospect of raising it to 18 years in the near future; (11) that more effective supervision be provided for commercial trade schools.

Quebec Provincial Federation of Labour (TLC)

Accompanied by a large delegation of union members, the Executive of the Quebec Provincial Federation of Labour (TLC) made its annual presentation of legislative proposals to Premier Maurice Duplessis and members of his Cabinet on December 15, 1948.

The delegation was headed by President J. E. Beaudoin; Secretary-Treasurer M. E. Francq; Vice-Presidents J. B. Arseneault, René Michaud and Phil Cutler; and Regional Vice-Presidents R. M. Bennett, Harry Bell and René Fournier.

Before proceeding with the presentation of legislative proposals, the delegation, in its brief, drew attention to "the battle of ideologies," which, it was asserted, "cannot be won, either by legislative decree or by vocal opposition alone." In order to defeat Communism and other "isms" it was necessary also to "strive to eliminate those conditions that breed discontent; we must provide equal justice under the law. . . ."

Labour Legislation Reviewed

Referring specifically to the Labour Relations Act, the brief pointed out that it had been "a great disappointment to the workers of Quebec" mainly because of the manner in which it was administered and the interpretation placed on certain sections by the Labour Relations Board.

It was claimed that the Act was designed to guarantee the workers' right to organize and to promote industrial peace. But the Board had "failed to provide equal justice under the law. Employers, who have flagrantly violated the law and discharged workers for union activity, have not been prosecuted," it was asserted. On the other hand, "the Board has been very harsh in its treatment of labour unions; it has refused and even revoked certifications at the slightest pretext, often at the request of an employer."

New Labour Code

The brief expressed the Federation's gratification that a new Labour Code was

to be submitted to the Legislative Assembly at its next session. It was suggested that the following provisions should be included: (1) a clear definition of what constitutes "company unions;" safeguards against their certification as collective bargaining agencies and their automatic dissolution on proof that they are not *bona fide* unions; (2) compulsory re-employment of workers discharged for union activity and the payment of wages for time lost; (3) protection of unions from injunctions and legal procedures taken by employers as a form of reprisal; (4) assurance that when a vote is taken by the Labour Relations Board to determine a bargaining agent, only those employees designated by the Union as a proper bargaining unit and approved by the Board, should have the right to vote; (5) a guarantee that the threat of lock-outs, moving or closing of plants, and industrial espionage shall be considered forbidden practices; (6) responsibility and authority for prosecuting violations of the Code to be vested in the Board and that penalties be imposed without fear or favour, on employers as well as unions; (7) nothing to be placed in the Code that shall prevent the insertion in a collective agreement of a provision requiring, as a condition of employment, membership in a specified trade union, or granting preference of employment to members of a specified trade union; (8) that the administration of the proposed new Labour Code be composed of an equal number of employer and employee representatives, under the Chairmanship of a government representative. The Federation felt that it should have the right to recommend a representative on this Board.

The Government was commended for speeding up arbitration procedure, but the Federation asked that the procedure be strengthened by appointing to the conciliation service better men at better pay.

Bargaining with Crown Employees

The delegation took the position that the Government and its agencies should bargain collectively with their organized employees. Premier Duplessis interposed to claim that there was a wide difference between employees of a private company and employees of the Crown in the matter of trade union membership. The welfare of the public was at stake in the latter cases. Crown employees should be responsible to the public and should not be members of an organization affiliated with other labour bodies, he said.

Workmen's Compensation Act

The following amendments to the Workmen's Compensation Act were requested: (1) establishment throughout Canada of a uniform rate of compensation, based on 100 per cent of the wages of the injured worker; (2) that the Act be made applicable to all trades and services for all accidents attributable to the nature of the employment; (3) that compensation be paid from the date of injury or disability, without any waiting period; (4) that supervision of accident prevention measures be placed under the Workmen's Compensation Board and the necessary personnel provided to make the supervision effective; (5) that blanket coverage be given all occupational diseases or diseases attributable to the nature of employment.

The delegation considered that more effective measures to prevent silicosis should be adopted and that particular care should be provided for victims of the disease. It was felt too, that the Compensation Board should exercise every care before accepting a medical report that claimed that hernia contracted by a worker did not result from the injured workman's occupation. Objection was taken to the Board's practice of reducing compensation as soon as wounds were healed and before the injured workman was able to resume his regular work. It was urged that Appeal Boards should be provided for workmen who felt that the decisions of the Board in their cases were unjust.

Prevention of Accidents

It was pointed out that organized labour was alarmed at the increase in the number of industrial accidents in Quebec. In the opinion of the delegation the Government should "legislate a definite program for accident prevention" and, in the meantime, the law should be more stringently enforced.

Minimum Wage Act

It was urged that the ordinances of the Minimum Wage Board do not provide minimum wage rates that conform to the ever-increasing cost of living. Consequently, it was held that the Board should be instructed to amend its ordinances to provide a minimum wage rate of 65 cents an hour.

Abolition of Zones

The deputation asked the Government to eliminate "economic zones" in the province of Quebec, as they considered them an injustice to the workers.

Vacations with Pay

An extension of the Vacations with Pay Ordinance was requested to provide for two weeks' vacation with pay for every employee having completed one year's continuous service. In addition, it was recommended that in all collective labour agreements concerning workers in the building trades, employers be required to keep accurate records of the time worked, including overtime, and to establish a vacation credit, for each employee, of four per cent of his earnings at the end of each working day or week; this vacation credit to be paid entirely by the employer, over and above the regular scale of wages. It was suggested that the credits be recorded by a system of stamps which would be redeemable by the employee in any chartered bank from July 1 to December 31 in each year.

Old Age Pensions

The delegation proposed that pensions be paid to all male persons at the age of 60, that the wives of such pensioners become pensionable at the same time and that all other female persons become pensionable at the age of 55 years.

It was also proposed (1) that the only residential qualification required be 15 years in Canada; (2) that no deductions be made on account of other income; (3) that present pensions be increased to \$60 a month, plus cost-of-living bonus; (4) that the same pension be paid to blind persons at age 18; (5) that all totally disabled persons be brought under the pension scheme.

Lord's Day Act

The Government was urgently requested to enforce the Lord's Day Act and to put a stop to abuses of the Act by many employers who force their employees to work on the Lord's Day for no other reason than to make larger profits.

Other Recommendations

Other matters covered by the brief included: (1) amendments of the Pipe Mechanic's Act; (2) the passage of a security code for elevators; (3) the adoption of legislation to provide safety conditions in moving picture theatres; (4) the raising of

the cost of competency cards issued by Parity Committees; (5) amendments to the Civil Code to hold employers responsible for the tools of their employees; (6) better safety regulations governing scaffolding; and (7) specialized schools for backward children.

Saskatchewan Executive Committee (TLC)

The Saskatchewan Executive Committee of the Trades and Labour Congress of Canada presented a series of legislative proposals to Premier Douglas and members of his Cabinet on December 21, 1948.

The brief was presented by J. R. Griffiths, Executive Chairman, who, at the outset of the presentation commended the Government for legislation beneficial to the workers of Saskatchewan, which had been enacted during its term of office. In particular, changes effected in the Trade Union Act and the inauguration of a more generally applicable health service were approved.

Workmen's Compensation Act

It was recommended that the Workmen's Compensation Act be amended to provide (1) that compensation payments commence from the day after the injury occurs and be paid on the full earnings of the worker; (2) that the jurisdiction of factory inspection be placed under the Compensation Board and that adequate inspection service be provided; (3) that steps be taken to inform all workers of the provisions of the Workmen's Compensation Act; (4) that the words "accident" and "industrial diseases," as used in the Act, be replaced by the words "injury" and "occupational diseases and hazards," respectively; (5) that complete coverage be provided for all workers in Saskatchewan and that the Compensation Board be given wide discretionary powers in regard to injuries not covered by the Act, particularly as applied to any new industrial or occupational disease which might develop; (6) that stipulated sums be paid for the loss of limbs, eyes, etc; (7) that reference to "final payment" in the Compensation Board's accounting system be deleted; (8) that in the case of workers such as truck drivers, etc., compensation coverage be provided for the full time such workers are engaged in their employer's business; (9) that it be made mandatory for grain elevator companies that have not modern dust collection or prevention systems in their elevators, to instal them immediately and that specific

safety standards be established and safety precautions prescribed and enforced in projects involving the demolition of buildings or kindred undertakings; (10) that compensation payable to widows and orphans and pensions for disabilities and injuries be increased.

Orders of Minimum Wage Board

Emphasis was again placed on the need for the abolition of "split shifts" by the Minimum Wage Board and that until such time as this can be carried out, it was recommended "that the spread where eight hours shall be worked will be not more than ten hours."

It was further recommended that the Public Holiday clause in all Orders of the Board be made applicable to all workers, and that employees should not be charged for breakages and replacements.

Fair Wage Act

The Executive suggested that without prejudice to its recommendations with respect to Orders of the Minimum Wage Board, the Government should consider the enactment of a Fair Wage Act, to supersede the existing Minimum Wage Board Orders with the following provisions: (1) fair wages in industry and trade; (2) authority to set fair wages after consideration of all representations; (3) an administrative board composed of an equal number of employers and employees.

Apprenticeship Act

It was the opinion of the Executive that the existing administration of the Apprenticeship Act was inadequate. It was requested that the Apprenticeship Board be made up of equal representation of employers and employees, the latter to be journeymen in the respective trades, nominated by established trade unions. It was suggested too, that the trade unions should nominate members to the Examining Boards and review all applications for certificates of qualification. Further, it was held that the Director of Apprenticeship should be

a duly qualified tradesman, approved by the Provincial Executive of the TLC and should be paid for his services an amount "commensurate with the position held."

Trade Union Act

Several amendments to the Trade Union Act were suggested, some of which involved merely a re-wording of certain clauses. Among the changes requested were: (1) prohibiting the employment of legal counsel by either of the parties in collective bargaining negotiations, as well as in cases brought before the Labour Relations Board, unless both parties give their consent thereto; (2) restricting the definition of "employee" in subsection 5 of section 2 of the Act to "a person employed to do skilled or unskilled manual, or clerical or technical work. . . ."; (3) to make sure that the sale, lease or transfer of a business shall not change collective agreements that are in force and that "all proceedings (between the management and labour) shall continue as if there had been no change made. . . ."; (4) requesting that the Crown in the right of the Government of Saskatchewan, be not excluded as an employer within the full meaning and provisions of the Act. It was claimed that the TLC had demonstrated its right to continue to bargain collectively with the Crown.

Hours of Work Act

Exemptions already granted under the Hours of Work Act were criticized and the request was made that all workers in Saskatchewan be immediately included under the provisions of the Act. Specifically mentioned were milk delivery salesmen, hospital lay employees and fire fighters not covered by the three-platoon system.

Previous requests for the establishment of a 40-hour week were reiterated.

Holidays with Pay Act

Legislation was asked for to require that holiday pay shall be computed on basic weekly earnings, irrespective of any time

lost through sickness or injury; also that the stamp system be adopted for recording holiday compensation.

Other Recommendations

The brief also requested:—

(1) that civic elections be held earlier than December in each year and that civic employees be not barred from running for any elective office;

(2) that janitors, caretakers, elevator operators and employees of charitable, religious and fraternal organizations be brought under the One Day's Rest in Seven Act;

(3) that the "so-called Education tax be removed;"

(4) that the payment of all fees under the Hospital Act be made by payroll deductions;

(5) that the Hospital Act "provide for full coverage;"

(6) that disabled pensioners receiving less than \$60 per month be relieved of the payment of hospital fees for themselves and their families;

(7) that anaesthetics and X-ray treatments be provided "free to all out-patients and patients in hospitals and nursing homes;"

(8) that Government Departments and Crown Corporations should purchase goods and engage services *only* from firms or individual business establishments having collective bargaining agreements with *bona fide* trade unions;

(9) that tipping in beer parlours be not included as illegal under the Saskatchewan Liquor Act;

(10) that more free scholarships be provided for promising students, who lack sufficient means to continue their studies;

(11) that "all efforts be used to initiate a contributory scheme (for old age pensions) free from the means' test;

(12) that equal representation be accorded labour on all boards and commissions, specifically on the Penitentiary Commission and the Milk Board.

RECRUITING OF FARM LABOUR URGED AS FUNCTION OF FARM LABOUR SERVICE

At the annual Conference of Dominion-Provincial farm labour officials in December, it was recommended that the Federal and Provincial Governments designate the Dominion-Provincial Farm Labour Committees as the authority to be responsible for the securing and placement of agricultural workers. This, and a further recommendation that the immigration of agricultural workers be on the basis of family groups, sufficient to meet the requirements of farmers who can provide adequate housing, were among the more significant decisions of the Conference.

The Sixth Dominion-Provincial Farm Labour Conference was held in the Board Room of the Department of Labour, Ottawa, on December 9 and 10, 1948. Mr. W. W. Dawson, Director, Immigration and Farm Labour Division of the Federal Department of Labour, presided.

The following officials and official observers attended the Conference:—

Provincial Directors of Farm Labour:

W. R. Shaw (Deputy Minister of Agriculture), Prince Edward Island; S. E. Lewis, Nova Scotia; E. M. Taylor, New Brunswick; Alex J. Rioux, Quebec; R. S. Duncan, Ontario; H. R. Richardson, Manitoba; E. E. Brockelbank, Saskatchewan; R. M. Putnam, Alberta; W. MacGillivray, British Columbia.

Employment Advisers: H. R. Hare (Primary Industries), National Employment Service, Ottawa; D. W. Hay (Agriculture), Maritime Region, NES; Armand Theriault (Primary Industries), Quebec Region, NES; W. Davison (Agriculture), Ontario Region, NES; J. F. Kristjansson (Primary Industries), Prairie Region, NES; F. C. Hitchcock (Primary Industries), Saskatchewan; M. M. Gibson (Primary Industries), Alberta; J. E. Wood (Primary Industries), British Columbia, NES.

Selby Parsons (Agriculture), Newfoundland; D. W. Fessenden and L. J. Bresnahan, United States Employment Service.

Federal Department of Labour: W. W. Dawson, Supervisor, Immigration and Farm Placements; A. D. MacDonald, Secretary, Immigration and Farm Placements; G. V. Haythorne, Research and Statistics Branch.

Other Department of Labour officials who attended one or more sessions of the Conference:—

Mr. A. MacNamara, Deputy Minister; M. M. Maclean and R. Ranger, Assistants to the Deputy Minister; C. A. L. Murchison, Unemployment Insurance Commission; W. K. Rutherford, Director of Employment Service, NES; G. H. McGee, Immigration and Farm Placements Division.

Others in attendance were:—

Hon. A. C. Taylor, Minister of Agriculture, New Brunswick; R. O. Westley and Quentin R. Bates, United States Embassy, Ottawa; J. A. Paul, General Superintendent, Farms Division, Veterans' Land Act, Ottawa; J. F. Booth, Department of Agriculture, Ottawa; G. C. Retson, Department of Agriculture, Nova Scotia; Alex. Maclaren, Director of Farm Service Force, Ontario; N. W. Harrison, Department of Agriculture, Ontario; E. G. Minielly, Manitoba Sugar Company and J. Ostrowski, K. Klimaszewski and S. Sznuk of the Polish Combatants Association.

Among the items on the agenda were the following: (1) reception of reports presented by the Provincial Directors of Farm Labour with reference to the international and inter-provincial movements of farm labour during 1948; (2) the continuation of the Dominion-Provincial Farm Labour Program; (3) prospective demand for farm labour in 1949, including interprovincial, international and seasonal requirements; (4) potential sources of labour supply (a) displaced persons; (b) Polish veterans; (c) immigrants from Great Britain and Holland.

In his introductory remarks, Mr. Dawson reviewed the activities of the Farm Labour organization during 1948 and stated that so far as he knew "there had been no loss of crops in Canada that could be attributed to a shortage of workers." The country "had moved from a period of war emergencies into a normal period, and we should plan accordingly," he said.

Address by Mr. A. MacNamara

In a brief address, Mr. A. MacNamara, Deputy Minister of Labour, welcomed the provincial representatives and the official observers from Newfoundland and the United States. He referred to the fine spirit of co-operation that had hitherto been shown in carrying on the placement of farm workers both on the interprovincial and international levels. He pointed out that approximately 10,000 additional workers had been placed on Canadian farms late in 1947 and in 1948. Inasmuch as there was a tendency of workers to move to urban communities, it would be necessary to make replacements. He thought that the level of employment on farms in 1949 would be about the same as in 1948 and that shortages could be made up by immigration from Great Britain and other European countries.

Mr. MacNamara suggested that a questionnaire be sent to all farmers in Canada asking them to report (1) the number of workers they would require in 1949; (2) are they willing to employ married workers; (3) have they housing accommodation for (a) single workers; (b) married couples for 12 months of the year; (4) do they require domestic workers. Such information, he felt, was needed in order to determine the classes and the numbers of immigrants to be admitted, as well as the most suitable times for admitting them. He expressed satisfaction with the results so far obtained from the farm placements of displaced persons. Almost all of these had kept their covenants to remain on farms for a definite probationary period, and employers, as well as the Government, were pleased with their conduct. Referring to inter-provincial transfers of workers he asked the provincial representatives to state their opinions as to the advisability of continuing the program and to offer suggestions that might improve it.

Comments by Mr. Murchison

Mr. C. A. L. Murchison, a member of the Unemployment Insurance Commission, praised the co-operation that had been attained between the provincial authorities

and the local offices of the National Employment Service in the placement of farm workers. He noted approvingly the progress that had been made in the reception of immigrants. The present method of helping them to "feel that they are a part of Canada as soon as they arrive," was, in his opinion, a great advance over the one-time way of letting them fend for themselves from the moment of their arrival in Canada.

Report by Hon. A. C. Taylor

Hon. A. C. Taylor, Minister of Agriculture for New Brunswick, made a verbal report on the Agricultural Production Conference which had been held in Ottawa two days before. He pointed out that "some agricultural commodities were being produced in surplus, and it might be necessary to curtail their production." He expressed "some concern over the fact that costs of production were still increasing" and that while the income of farmers had been high, "the future of farmers would be difficult unless the present levels of production costs and income were kept in proper relationship."

Reports of Provincial Directors

Prince Edward Island: Keen demand for industrial workers in central Canada was said to be attracting many farm workers from Prince Edward Island and even exerting a strong pull on European immigrants, including Polish veterans. The greater number of Island farmers required single men and few had adequate housing facilities for married men. As a result, the farm labour situation there "is fraught with uncertainty" and farmers find it "difficult to plan an aggressive program of production."

During 1948, the main movement of farm labour was in connection with the harvesting of the potato crop and to a lesser extent to help harvest hay and grain earlier in the season. About 1,000 men were brought in from Nova Scotia and New Brunswick for this work and, for the most part, gave "commendable service." The services rendered by the Regional and Local offices of NES in meeting these emergency demands were "highly commended."

The workers from displaced persons' camps and the Polish War veterans who were employed on Prince Edward Island farms were found to be industrious, but many of them were unsuited and untrained for farm work. This was true also of girls from the DP camps who were employed as home helpers. A number had already left

for other parts of Canada and others were planning to go as soon as they could complete the necessary arrangements. The report urged that immigrants selected for farm work "should be made from areas where experience and thinking is directed more intimately toward the soil and agriculture."

The immigrants from the Netherlands were reported to be giving "excellent satisfaction." A number of these had decided to settle in the province.

Nova Scotia: As the apple crop in the Annapolis Valley was small in 1948, the farm labour problem was "relatively simple as compared with previous years." Fewer than 200 men were brought into the province for this work. Other necessary farm help was obtained locally.

Approximately 125 of the 150 Polish veterans who had been placed on Nova Scotia farms remained at farm employment. However, "a considerable number have left for other work" after completing their two-year contract to work on farms. A number of single persons from DP camps as well as Dutch immigrants—married men with families were placed on Nova Scotia farms. It was found that married men "were more satisfactory than single men in that they usually wish to stay in one place, rather than move around." However, "comparatively few farmers have the required extra living accommodation."

It was reported to be the intention of the provincial "Department of Agriculture to assist all desirable immigrant families to become established on farms of their own in the Province just as soon as they can accumulate some capital of their own and satisfy our Committee that they will make desirable Canadian citizens."

There is still a very keen demand for farm domestic help in Nova Scotia. However, farmers were reported to be of the opinion that a minimum wage of \$35 a month plus board and lodging was too high and should be lowered to \$25 a month. This, it was claimed, was sufficient, especially for girls who had little knowledge of the English language and Canadian customs.

New Brunswick: The farm labour supply in New Brunswick during 1948 was reported to be more abundant than for several years. A seasonal demand for haymaking exceeded the supply for a time. About 1,000 workers were sent to assist with the potato harvest in Maine. It was asserted that wage rates were, in general, too high and, as a result, farm operations "have been adjusted downwards by many farmers."

Polish veterans lived up to their contracts, but it was expected that a considerable number would move to other industries. Only about 25 displaced persons were employed in the province, but it was anticipated that they too would seek employment in industry "before they really acquire agricultural usefulness in this country." About 18 Dutch immigrants were placed on farms under a one-year contract, approximately one-third of whom "have gone to their group settlements in other parts of Canada."

Quebec: Over 5,000 workers were placed on Quebec farms by employment offices in 1948. Placements were divided almost evenly between market gardens and special production farms on the one hand and dairy and general farms on the other.

Some 520 harvesters, about half of them from urban centres, were recruited through NES offices in Quebec to assist with the harvests on the Prairies.

More than 6,000 workers were granted exit permits to assist with the potato harvest in Maine. However, some 1,300 of these did not cross the border.

Nearly 500 Polish veterans were employed on Quebec farms during 1948 and proved to be very satisfactory workers. It was expected that about 50 per cent of these will remain on farms after the completion of their two-year contracts. Many of these, having accumulated between \$1,000 and \$2,000, are planning to buy or rent farms in the province.

Owing to the lack of farming experience the displaced persons who were given farm employment in Quebec were not quite the equal of the Polish veterans, but were reported "to be of about equal value" to those recruited by the Employment Offices. Small numbers of DP married couples and domestic helpers were placed during the year.

Ontario: Movement of farm labourers from the Prairies for short-term employment in Ontario was small in 1948. Of the 2,500 asked for, only 920 reached Ontario. However, most of them gave "satisfactory accounts of themselves and there were few misfits or drifters." Some 200 men were brought from the Maritimes to assist with the harvest in Eastern Ontario. Between August 20 and September 9, 1,505 men were sent from Ontario to assist with the harvest on the Prairies.

Up to the end of November, 1,459 displaced persons were placed on Ontario farms during the year. It was stated that "on the whole these immigrants have

rendered a useful service and the majority of farmers are well satisfied." A total of 138 girls from DP camps were placed on Ontario farms as domestic helpers. The homes to which these were assigned, as well as the girls themselves, were carefully selected and welfare work was undertaken through the Women's Institute Branch and the Home Economics Service of the Ontario Government.

Approximately 1,400 skilled tobacco workers were brought in from the United States and the flue-cured tobacco crop was harvested without loss.

About four per cent of the first 7,000 air immigrants from Britain were placed on farms. Many British immigrants were reported to be desirous of purchasing farms, but were prevented from doing so for the time being, owing to the restrictions in the transfer of funds.

Nearly 4,000 Dutch immigrants arrived in Ontario between April and September, 1948. Farmers were "most anxious to secure farm workers from Holland," but housing difficulties presented a big problem in the cases of immigrants having large families.

During November, 1,200 Polish war veterans in Ontario completed their two-year contracts. It was estimated that about 30 per cent of these will remain in agricultural employment. Some of these will eventually operate farms of their own. However, the loss to agriculture of the remaining 70 per cent is expected to create a demand for replacements in the Spring of 1949.

A total of 17 applications were received in Ontario from the United States for combines. Only three outfits went across the border to assist with the harvest.

Farm Service Force camps continued the Farm Commando Work originated during the war. It was organized either on a Farm Labour Co-operative, or on a Private Camp basis. In all, 22 camps were established for girls and 13 for boys in 1948. A total of 1,192 girls and 640 boys were housed in these camps during the fruit picking season. The National Council of the YWCA had, it was stated, rendered fine service in the administration of these camps.

Manitoba: Spring flood conditions and the influx of Polish veterans resulted in a reduced turnover of farm labour in Manitoba during the early part of the summer of 1948. Dutch farmers, supplemented by displaced persons were brought in to assist with the sugar beet crop. Most of the immigrants from Britain to western Canada proceeded to Alberta and British Columbia,

but those that remained in Manitoba proved to be efficient farm workers.

Only 100 men were available to be sent to Ontario to meet the demand for harvest help there. On the other hand, some 700 eastern harvesters helped with Manitoba harvests, later in the season. The province's quota for combine equipment to help with harvests in the United States was 91. The date of crossing the border was a month later than usual, owing to the short crop in the Southern States. This shortened the season and the financial returns were not as satisfactory as in 1947. About 900 potato pickers, limited to women and youths, were recruited to assist with the potato harvest in North Dakota.

Wages were higher than in 1947—\$90 to \$100 per month being offered prior to harvest, with day wages of seven dollars to nine dollars per day when threshing became general.

Saskatchewan: Saskatchewan's contribution to farm labour shortages outside the province in 1948 was 250 berry-pickers to British Columbia; 451 workers to assist with the fodder crops in Ontario; 226 combine outfits with a total complement of 700 men to help with harvesting in the Western States; 300 workers to aid in "blocking and thinning" the sugar beet crop in Montana in the spring, and 350 workers for fall harvesting.

The estimated requirements for workers from Eastern Canada to harvest the crops of the province was 700. A total of 629 was received and, in spite of brief local shortages of workers, the crop was harvested without loss. For the first time since the start of the war all farm placements in the province were made by NES offices, and temporary harvest labour offices were not set up.

Of the 428 Polish veterans assigned to Saskatchewan, a late survey showed that 357 were still in agricultural employment. Five had already established themselves on farms. Up to the end of November, 1948, the Province received from DP camps, 12 married couples, 77 single male workers and 117 domestic helpers. The majority of these seemed anxious to establish themselves in agriculture. In addition, approximately 40 Dutch families came to the Province.

Alberta: It was stated that "the bulk of the 780 Polish veterans received (by Alberta) in November, 1946, and in May, 1947, were still in agriculture." However, it was expected that "a considerable number of these men plan to leave agriculture at

the termination of their two-year agreements," but it was considered possible that some of them would return when they had saved enough money to purchase farms.

A group of 557 displaced persons, some of them with dependents, were employed on sugar-beet farms for a portion of the season and gave a good account of themselves. Another group of 110 single and nine married couples were assigned to general farm work throughout the Province and they too proved to be good workers. In addition, 123 girls were placed as domestic helpers on farms. Some difficulty was encountered in inducing them to accept farm employment, as they seemed anxious to be given work in the cities.

Only 32 British immigrants were placed in agricultural employment in Alberta during the year. Many more could have been placed had they been available.

A total of 960 harvesters were brought from Eastern Canada to assist in harvesting the Alberta grain crops. At the outset, wages of five dollars to seven dollars per day were paid, but soon advanced to seven and eight dollars per day.

Owing to conditions in the United States, there was a decreased demand for combines and crews to assist in harvesting operations. Exit permits were granted to 104 outfits from Alberta as compared with 160 in 1947.

British Columbia: Unusual climatic and flood conditions in British Columbia during the spring and summer of 1948 greatly modified the placement of farm labour. Flood conditions in the Fraser valley ruined hundreds of acres of small fruit farms. It had been anticipated that this disaster would release sufficient workers to harvest such crops growing on higher ground. This assumption proved to be wrong and it was necessary to bring in some 450 women and girls from the Prairie Provinces to assist in fruit picking and processing. In addition, recruits were obtained from nearby urban centres. At one time, over 700 workers were sent daily by busses and trucks from New Westminster and returned to their homes in the evening.

Some areas in the lower mainland suffered from excessive rains during the season and considerable quantities of fruits were lost as a result. Bad weather conditions hindered harvesting operations in some of the grain and potato growing areas, and reduced the apple crop considerably. As a result, farm labour problems were correspondingly abnormal.

Many of the Polish veterans who had been assigned to British Columbia were reported to have made "excellent progress." It was expected that 60 per cent of them would remain in farm or ranch work.

During the year "a considerable number" of Dutch immigrants, both married and single, were established in the Province. A small number of men from DP camps were admitted, but proved unsuitable for farm work and were placed in other lines of employment. Women from DP camps were found positions as farm domestic helpers and in most cases, have given satisfactory service.

The Director of Agricultural Development and Extension for the Province stated that "a definite policy on immigration must be developed by the Provincial Government in co-operation with either the Department of Labour in Ottawa, or the Immigration Branch of the Department of Mines and Resources." It was felt that the problem of bringing immigrants from Britain and continental Europe for agricultural settlement and employment should be channelled through one such single organization.

Dominion-Provincial Agreements

Raising the question of the renewal of the Dominion-Provincial Farm Labour Agreements, the Chairman stated that it "could only be based on a request from the provinces for their continuation." He stated that "the Department of Labour and the Dominion Government were ready to continue the program indefinitely," and "they believed it should be continued on a more definite basis." He pointed out that there was no assurance that emergency farm labour requirements in future could be met from such sources as displaced persons' camps and Polish veterans, and declared that "a proper approach to the long-term problem could be made only if there was some assurance of continuity of the arrangement."

It was finally decided unanimously that the agreements should be continued for at least another year, and that the question of long-term agreements should be submitted to the several Provincial governments for their consideration.

Farm Labour—Demand and Supply

The chairman stated that there were indications that about 50 per cent of the Polish veteran farm workers now in Canada would give up farm work as soon as their two-year contracts had expired. There was, however, some assurance that a number of

those who had left farm work would return to it. In any case, he felt that "there would still be a substantial net loss." If, as was anticipated, employment remained at a high level during 1949, there would be a shifting of workers from farms to industry. Thus, it was important to determine prospective demand for farm workers in 1949, the chairman stated.

Newfoundland, Source of Supply:

During the discussion that followed, Mr. Selby Parsons, who represented Newfoundland, stated that "at the present moment, there might be as many as 2,000 men (in Newfoundland) who might be interested in farm work in Canada." With regard to girls for domestic work, Mr. Parsons said that if wages were satisfactory, "perhaps 500 to 1,000 girls might be found for Canada." However, as there were few farms in Newfoundland, many of these men and girls, while probably good workers, were inexperienced in farm work.

Transportation Cost Shared: Concerning the movement of workers from Eastern Canada to assist with the harvests on the Prairies, and vice versa, it was pointed out that costs of transportation were shared by the Dominion and the receiving province.

Trans-Border Movement: Representatives from the United States Employment Service, Messrs. Fessenden and Bresnahan, referred to difficulties that had occurred in the trans-border movement of workers from Canada in 1948, but hoped that these could be corrected and thus facilitate the transfer of Canadians to assist in potato and grain harvesting in 1949. Mr. Bresnahan asserted that the Canadian potato workers in Maine brought back to Canada earnings of \$1,100,000 in United States funds in 1948.

The discussion on the international exchange of workers included tobacco workers from the United States to Ontario; sugar beet workers to Montana; pea-viners to Maine; potato pickers to Maine and North Dakota; combines and crews to the Western States and maple sugar workers to the northeastern States. In most respects the administrative machinery was considered to be satisfactory and it was decided to continue it.

Revision of Border Regulations: Representatives of both countries met as a sub-committee of the Conference and revised the regulations with respect to the movement of potato workers from Canada to Maine. The revisions, which were subsequently approved by the Conference, stipulated: (1) that the NES provide a senior supervisor and a representative at all U.S.

points of entry for potato workers; (2) that the U.S. officials inform Canadian officials as early as possible their minimum requirements, so as to facilitate recruitment of workers; (3) that American employers provide adequate transportation for workers from border points to places of employment; (4) that American employers establish a fund to provide housing and food for Canadians who were properly recruited, but were not immediately taken to places of employment; (5) that American Employment Service officials would contact the employer groups as to the advisability of providing State liability insurance for Canadian workers in transit; (6) that deductions made by American employers from bond-covered Canadian workers in 1948, be returned to the workers; (7) that NES assume responsibility for non-recruited Canadian workers; (8) that recruitment would, if possible, be restricted to males from rural areas, except where females were members of a family group; (9) that a meeting of Canadian officials, Maine employment officers and USES representatives be held early in the Spring of 1949 to determine the maximum number of workers to be allowed through each port daily, etc.

Immigration: It was agreed that the Dutch workers who were brought to Canada last year were satisfactory, but there was considerable criticism of the methods of handling these workers. The following resolution was approved:—

Whereas all the provinces of Canada have entered into agreements with the Dominion Department of Labour to provide people for agriculture from all possible sources both in and outside of Canada, and

Whereas under these agreements some provinces are accepting and placing Polish veterans and displaced persons on farms and in farm homes, and

Whereas it is to the interest of all concerned and essential to the provinces involved that the number of agricultural workers brought to the provinces from abroad be determined and limited to the number that can be properly absorbed, and

Whereas agricultural workers and immigrants are being brought to Canada and placed on farms in the provinces by a number of agencies which do not provide the provinces with particulars of the applications received from farmers nor the workers who arrive, which leads to certain confusion and even duplication,

Now therefore be it resolved that this Conference urge the Federal and the Provincial Governments to designate the Dominion-Provincial Farm Labour Service as the authority to be responsible for the securing and placement of agricultural workers, to the end that confusion and duplication may be removed and all such workers placed in satisfactory employment leading to their becoming desirable citizens the sooner.

The discussion concerning the admission of more displaced persons indicated that more family groups, rather than single persons, should be admitted, provided adequate housing facilities on farms could be assured. It was decided to send a letter to Canadian farmers asking them to state their labour requirements for 1949.

It was revealed that the Federal Department of Labour had an office in London, England, and that it might be possible to clear orders there for special types of workers from Great Britain.

It was decided to ask Department of Labour officials in England to report on the availability of suitable Polish veterans for farm employment in Canada.

Land Settlement Plans

The land settlement program set up in Nova Scotia for Polish veterans already in Canada was outlined to the Conference. It provides for loans up to two-thirds of the purchase price of land and fifty per cent of the purchase price of stock and equipment at three and one-half per cent in-

terest; loans to be paid on the amortization plan over a period of 25 years.

The chairman stated that the Veterans' Land Act Administration of the Department of Veterans Affairs had agreed to co-operate with the Department of Labour and the provincial governments in assisting in the settlement of Polish veterans who were able to qualify under the regulations.

Following a lengthy discussion, the Conference decided not to attempt any estimate of farm labour requirements for 1949 until the provincial officials had completed studies in their respective regions. It was agreed that the results of these studies would be communicated to the Department of Labour at Ottawa, as the centralizing agency.

The Conference was in agreement that efforts should be made "to obtain greater stabilization of farm labour." Better housing and better working conditions were held to be important contributing factors in achieving this end, and it was asserted that the Dominion and Provincial governments should do everything possible "to bring this matter to the attention of agricultural associates and farmers generally."

RECENT LABOUR LEGISLATION IN INDIA

Considerable progress has been made in India recently in regard to labour legislation. Compulsory union recognition, improved conciliation procedures, the establishment of an employment service, social insurance, minimum wages, and better factories and mines standards have all been provided for. An interesting aspect of the Government's approach to labour matters is its use of tripartite machinery such as is employed by the International Labour Organization.

Legislative proposals of the Government of India, including a five-year program of legislation, as considered by the Eighth Labour Conference of India in 1947, and the constitutional powers of the Central and Provincial Legislatures in relation to labour were described in the LABOUR GAZETTE for November, 1947 (p. 1688).

Considerable progress was made in 1947 and 1948 in carrying out the Government's program of labour legislation. A summary of recent developments is given below.

Among the more important measures passed in 1947 were the Acts relating to the investigation and settlement of indus-

trial disputes—the Industrial Disputes Act and the Indian Trade Unions (Amendment) Act.

The Industrial Disputes Act, which came into force on April 1, 1947, contains certain significant modifications of the Trade Disputes Act, 1929, which were found necessary in the light of experience gained during the war years. In addition to Boards of Conciliation and Courts of Inquiry, provision is made for the setting up of Works Committees and Industrial Tribunals. Works Committees, which are to be equally representative of employers and workers, are to be established in industrial establishments

employing 100 or more workers. The Act makes conciliation compulsory in all disputes in public utility services and optional in other cases. The Government has power to refer any dispute to an Industrial Tribunal for adjudication and to enforce its award for a period not exceeding one year. Strikes and lockouts are prohibited during conciliation and adjudication proceedings. Conciliation machinery under this Act is being built up gradually.

Although previously the Indian Trade Unions Act, 1926, provided for the registration of trade unions, it placed no obligation on the employer to recognize any registered trade union. By the amending Act, it is now made obligatory on employers to recognize representative unions of their employees by order of a labour court, provided specified conditions are satisfied. It defines certain acts as unfair practices on the part of recognized unions and of employers, and prescribes penalties for these Acts.

The Government of India is implementing the Industrial Truce resolution which was adopted at the Industries Conference in New Delhi in December, 1947, at which management, labour and Government were represented. The resolution called upon labour and management to maintain industrial peace and to avert strikes, lockouts and slowing down of production for a period of three years. Tripartite central, regional and unit committees are being set up to give effect to the resolution.

An Employment Service has been set up, consisting of a network of employment exchanges where records of workers are maintained. In building up this service an effort has been made to adopt the technique of the United States and the United Kingdom. To carry on its work and secure the right man for the job, the Employment Service will undertake technical and vocational training of workers.

A Minimum Wages Act, the first step towards wage regulation, was passed by the Indian Parliament on February 9, 1948. The Factories and Mines Act were revised to bring them into line with similar measures in more highly developed industrial countries. Provision was made for canteens, holidays with pay, and in mines for pithead baths. Welfare schemes have been promoted in certain industries, such as coal and mica.

From January 15, 1948, the Payment of Wages Act, 1936, which ensures regular payment of all remuneration to workers was extended to cover workers in coal mines.

Also enacted in 1948 was the Dock Workers (Regulation of Employment) Act

which provides for the registration of dock workers so as to remove the evils of casual employment, and for the regulation of their wages, hours and other working conditions.

The Government is also turning its attention to the agricultural worker. After consultation with the Provincial Governments, a questionnaire has been prepared, and the International Labour Office has been asked to undertake a special study of the conditions of agricultural labour. The new Minimum Wages Act provides for wage regulation in agriculture.

In order to improve the unsatisfactory conditions obtaining with respect to plantation labour, a tripartite Industrial Committee on Plantations has been set up. A wage census has been taken and a health survey made, which will serve as a basis for further progress. The Government of Madras extended the provisions of the Payment of Wages Act to plantations with effect from April, 1947.

In the field of social security, the Employees' State Insurance Act received the assent of the Governor General on April 19, 1948. It is the first measure of its kind in Asia. The Act applies only to factory workers and provides for the establishment of a system of compulsory insurance against sickness, maternity and accidents. The Act is, in effect, a "pilot measure", intended to test what can be done and it is hoped that other classes of workers can be brought within its scope.

With a view to promoting the welfare and raising the standard of living of coal-miners, the Coal Mines Labour Welfare Fund Act was passed in 1947. It provides for the establishment of a Coal Mines Labour Housing and General Welfare Fund by the levy of an excise duty on all coal and coke despatched from collieries in India. An advisory committee to administer the Fund has been set up. Welfare activities for which the Fund is constituted include housing, provision of medical facilities, maternal and child welfare, public health, water supply, sanitation, canteens and education.

The Coal Mines Provident Fund and Bonus Schemes Act, 1948, provides for the introduction of a compulsory Provident Fund and Bonus Scheme for persons employed in coal mines. The Act is the outcome of recommendations of a Board of Conciliation which was appointed by the Government of India in February, 1947, to promote a settlement of industrial disputes in collieries in the Provinces of Bengal and Bihar.

The Provident Fund Scheme, the first of its kind to be instituted in India, will ensure provision for old age for about 250,000 coal miners. The scheme applies to all colliery workers who are under 55 and whose basic monthly salary is not over 300 rupees. Each worker will contribute roughly one anna per rupee of his basic wage and the employer an equal amount. A worker will be entitled to get back the full sum to his credit when he retires after the age of 55. Payment in case of invalidity or death is provided for. There will be a central fund for all collieries. In order to meet the cost of administering the scheme, provision has been made for the levy of an administrative charge payable by employers. Contributions will be collected through a stamp system.

A Coal Mines Bonus Scheme framed under the above Act has been made applicable to all coal mines in West Bengal, Bihar, Central Provinces, Berar and Orissa. The scheme prescribes a period of attendance as a condition for qualifying for a bonus which every employee in a coal mine in the above areas is entitled to receive. The amount of bonus payable to different categories of workers is set out. The amount payable for any period or quarter after June 30, 1948, will be one-third of basic earnings for such period.

The Government is contemplating a large-scale housing scheme to provide a million homes throughout the country. In the case of coal miners, a scheme for the construction of 50,000 houses in about five years has already been undertaken.

The Minister of Labour in a speech made at New Delhi on March 18, 1948, concerning the Government's labour policy and program of labour legislation stated:—

Our rate of progress has not pleased everybody. . . . Much remains to be done as will be clear from the five-year program which was prepared in 1946-47. . . . We are prepared to consider any practical steps for the betterment of the worker. We are pinning our faith in the tripartite machinery in India and the tripartite machinery of the ILO to achieve our objective.

A more detailed summary of some of the legislation noted above follows:—

Minimum Wages

The Minimum Wages Act which received the assent of the Governor General on March 15, 1948, provides for the fixing of minimum rates of wages for workers in a number of scheduled employments including agriculture in all the Provinces of India. The Act requires the Central or the Provincial Government, as appropriate, to fix within two years minimum rates of wages

for workers in carpet-making or shawl-weaving, rice or flour milling, tobacco manufacture, plantations, oil mills, road construction, building, stone breaking, mica mining, public motor transport, tanneries, leather manufacture and employment under any local authority, unless, in respect of any scheduled employment, less than 1,000 persons are employed in the entire province. Minimum rates for agricultural workers are to be fixed within three years. Other classes of employment may be added to those now covered. At least once every five years, the appropriate Government is obliged to review the rates fixed and revise them, if necessary.

The appropriate Government may fix time rates, piece rates, guaranteed rates and overtime rates. Different rates may be fixed for (a) different scheduled employments; (b) different classes of work in the same employment; (c) adults, adolescents, children and apprentices; (d) different localities. In regard to any employment for which minimum rates have been fixed under the Act, the appropriate Government may also prescribe the number of hours constituting a normal work-day, and provide for a weekly rest-day and for the payment for work on a rest-day at a rate not less than the overtime rate.

Before initial minima are set, the appropriate Government is required to appoint a committee and, where necessary, regional subcommittees, to inquire into wages, or to publish its proposals for the information of persons likely to be affected, and take their views into consideration. Unless otherwise provided, minimum rates are to come into force three months after notification in the official gazette. Before revision of rates, the appropriate Government is to be advised by as many advisory committees and subcommittees as it considers necessary to inquire into prevailing conditions.

Each Provincial Government is to appoint an Advisory Board to act in a general advisory capacity and to co-ordinate the work of committees appointed in connection with the fixing and revision of minimum rates. Further, a Central Advisory Board is to be appointed by the Central Government to advise the Central and Provincial Governments and to co-ordinate the work of Provincial Advisory Boards.

Committees and Advisory Boards are to be equally representative of employers and workers in the scheduled employments and are also to include independent members not exceeding one-third of the total membership. In each case, one of the independent members is to be appointed chairman.

For the local administration of the Act, inspectors with specified powers of entry and examination are to be appointed. Payment of wages below the minimum rate is punishable with a term of imprisonment not exceeding six months, or with a fine which may amount to 500 rupees, or with both. Employers who fail to maintain records and registers, as required by the Act, are liable to a fine which may extend to 500 rupees.

Factories

Speaking in the Dominion Parliament on the main changes made by the Factories Act, 1948, which consolidates and amends the Factories Act, 1934, the Minister of Labour stated:—

We have tried to implement as many of the provisions of the ILO Code of Industrial Hygiene as are practicable under Indian conditions. The provisions relating to periodical medical examination of young persons and the submission of plans of factory buildings are also from ILO Conventions. We have also freely drawn upon the British Factories Act, 1937, one of the most comprehensive pieces of legislation on this subject.

The Act which was passed on August 28, 1948, and will come into force on April 1, 1949, extends to all the Provinces of the Dominion and to States acceding to the Centre in respect of labour legislation.

The revision represents a complete overhauling of the Act, particularly as regards health, safety and welfare of workers, and a widening of its scope so that the number of workplaces covered is likely to be trebled. The distinction between "seasonal" and "non-seasonal" factories is removed so that basic provisions will be applicable to all factories whether such factory works for a part of a year or a whole year. The new Act raises the minimum age for employment from 12 to 14 years and reduces the working hours of young persons under 15 from 5 to 4½ in a day, and the Provincial Governments are empowered to prescribe a higher minimum age for employment in hazardous undertakings. In order to establish uniform standards in all the provinces, minimum requirements regarding health, safety and welfare are now clearly prescribed in the Act and the responsibility for observance laid on the occupier of the factory. Formerly, the Act was very general in character and certain precautions were either left to the rule-making powers of the Provincial Governments or carried out at the instance of the Inspector, resulting in varying standards in different factories and in different parts of the country.

As regards the extended scope of the Act, "factory" is now defined to include all estab-

lishments employing 10 or more workers where power is used, and 20 or more workers in other cases. Formerly, the Act applied only to establishments using power and employing 20 or more persons. Provision is made for Provincial Governments to extend health, safety and welfare provisions to any premises where a manufacturing process is carried on, with or without the aid of power, irrespective of the number employed, except where the work is done by the worker solely with the aid of his family.

A system of licensing and registering existing factories has been introduced. Another new provision stipulates that before a new factory is constructed or alterations made to an existing one, plans and specifications should be approved by the factory inspectorate. In case of new factories, a minimum standard of 500 cubic feet of space per worker is required.

As regards hours of work, the new Act fixes a maximum for adult workers, male and female, of 48 a week and nine a day, and provides that the work-periods of adult workers, including rest-periods, must not spread over more than 10½ hours. Previous maxima in "seasonal" factories of 50 and 10 hours, respectively, with a maximum duration of employment in a day of 11½ hours, are now removed. No extension beyond the daily limit of nine hours is permitted for women workers. Provincial Governments may not permit the total number of hours worked in any one day to exceed 10, nor the total amount of overtime worked to exceed 50 hours in any one quarter. The Act provides for overtime payment at twice the ordinary rate for all hours worked in excess of nine a day or 48 a week.

New sections which, if properly enforced, will result in a uniform higher standard in all factories relate to the guarding of new machinery, hoists and lifts, cranes and other lifting machinery, pressure plant, dangerous fumes, explosive or inflammable gases, ventilation, temperature, drinking water, washing facilities, lunch and rest rooms, sanitation, toilet accommodation, and storing and drying clothing. The obligation relating to the guarding of machinery is imposed not only on the factory owner but on the manufacturer and his selling agents.

Provision is made for seats so that in every factory where workers are obliged to stand while working they may rest whenever they get an opportunity. Where workers can work efficiently in a sitting position, seats must be provided.

Embodied in the Act is a 1947 amendment providing for the setting up of canteens. Provincial Governments are

empowered to require employers with more than 250 workers to set up and maintain an adequate canteen for the use of the workers, and where 500 or more workers are employed, the factory owner may be required to appoint a suitable welfare officer. The new Act also requires the provision of a *crèche* in all factories in which more than 50 women are normally employed.

The number of holidays with pay granted to factory workers has been increased from 10 days per year, or if a child 14 days, to one day's holiday for every 20 days of work performed during the previous 12 months, if an adult, subject to a minimum of 10 days, and one day for every 15 days of work in the case of a child under 15, subject to a minimum of 14 days.

Provision is made for medical examination of young persons not merely before initial employment but every year up to the age of 18. Workers in certain dangerous trades are to be medically examined periodically.

New provisions require factory owners and medical doctors to report diseases treated and accidents causing death or serious injury. Certifying surgeons are authorized to exercise medical supervision in any factory where a disease has occurred or is suspected. Power is also given to take for analysis samples of any substance used in the manufacturing process if its use is contrary to the Act or is likely to lead to injury or disease.

Penalty clauses now provide for imprisonment up to three months for a first offence and six months for subsequent offences, as well as for fines for contravention of the Act.

Provincial Governments are given power to exempt certain categories of factories from the Act. It is stated that this provision was included with a view to allowing the Provincial Governments time to set up the proper machinery for inspection and because of the difficulty in obtaining technical personnel for the inspectorate.

Social Insurance

The Employees' State Insurance Act, certain sections of which came into force in all the Provinces of India on September 1, 1948, will provide benefits in the form of periodical payments to insured persons for sickness, maternity and disablement resulting from employment injury, periodical benefits to dependants in fatal accidents, and medical treatment. The grant of medical benefits may be extended to the families of insured persons at the discretion

of the appropriate Government. The scheme applies to all factories, other than seasonal, which normally employ 20 or more persons. All factory employees whose remuneration does not exceed 400 rupees a month are to be liable for insurance. It is hoped that the scheme will cover over two million workers initially and that its scope may be extended later.

The scheme is to be financed from contributions levied on insured persons and their employers. Workers' contributions are to be deducted by employers from wages. Workers whose average wage is less than 1 rupee a day are exempt from contributions.

Insured workers are classified in eight groups according to the amount of their average daily wage, with Group 1 comprising workers earning less than 1 rupee and Group 8 those earning 8 rupees or more. Workers' weekly contributions range from 2 annas in Group 2 to 1 rupee 4 annas in Group 8; and employers' contributions from 7 annas in Groups 1 and 2 to 2 rupees 8 annas in Group 8.

The rates for sickness, disablement and dependants' benefit are assessed on the basis of an assumed average daily wage varying from 14 annas for insured persons in Group 1 to 10 rupees for those in Group 8, and the rates vary proportionately with the sum of the assumed average daily wages in a prescribed period and the number of weeks during which the insured person was available for employment or during which contributions were paid.

For sickness and maternity benefit, the contribution period consists of 26 consecutive weeks or six consecutive months, during which time weekly contributions are payable for at least two-thirds of the number of weeks that the insured person was available for employment, subject to a minimum of 12 contributions. In return for such contributions, the worker is entitled to benefits in a subsequent period of six months known as the benefit period. Sickness benefit is payable for not more than eight weeks in a year. Disablement and dependants' benefits at weekly rates prescribed in the Act are payable in lieu of compensation under the Workmen's Compensation Act. Disablement benefits are payable, while disability lasts or for life in the case of permanent disablement, and in fatal cases a widow or other dependants may receive a proportion of the full rate of benefit for life or until re-marriage. Proportionate benefits are also payable for children under 15 years, or 18 if the child continues its education.

To qualify for maternity benefit, insured women must fulfil contribution conditions

similar to those prescribed for sickness benefit, and must have paid at least one contribution between the 35th and 40th week before the week in which confinement took place. Maternity benefit is payable at the rate of 12 annas a day during a period of 12 weeks of which not more than six may precede the confinement.

Provincial Governments are expected to contribute about one-third of the cost of providing medical treatment. The Central Government will pay two-thirds of administrative expenses of the scheme for the first five years.

To administer the Act, an Employees' State Insurance Corporation of 31 members was set up by the Central Government on October 1, 1948. It includes the Minister of Labour in the Central Government as

Chairman, the Minister of Health in the Central Government as Vice-chairman, officials of the Central Government, and representatives of Provincial Governments, employers' and workers' organizations and the medical profession. The Central Government is empowered to appoint a number of officers of the Corporation, including a Director-General of Employees' State Insurance, an Insurance Commissioner and a Medical Commissioner. A Director-General of Employees' State Insurance has already been appointed.

The Corporation may promote measures for the improvement of the health and welfare of insured persons and for the rehabilitation and re-employment of the disabled or injured.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

INDUSTRIAL RELATIONS AND CONCILIATION

January was featured by the settlement of a lengthy dispute affecting pilots employed by Trans-Canada Air Lines and the continuance of harmonious relations in industry generally.

Introduction

Labour relations in the industrial field coming under the jurisdiction of the federal Department of Labour continued to be harmonious throughout the month of January, 1949.

* * *

Considerable interest attached to the settlement, reported at the end of the month, of a long-standing dispute between Trans-Canada Air Lines and the Canadian Air Line Pilots' Association. The dispute was first brought to the attention of the Minister of Labour in mid-November, 1947, and a Conciliation Officer was appointed at that time. There were five issues then in dispute, the most contentious of which was a demand by the Association for an increase of 20 per cent in the salaries of all captains and first officers, which was enlarged on December 22, 1947, to a demand for a 30 per cent increase because of further increases in the cost of living. The counter-proposal of the Company included an offer of an increase of \$30 per

month for captains but none for First Officers.

A compromise suggested by the Conciliation Officer was accepted by the Pilots' Association but rejected by Trans-Canada Air Lines, and on January 16, 1948, the Minister of Labour established a Conciliation Board under the chairmanship of Hon. Mr. Justice J. E. Adamson, of Winnipeg, which investigated the dispute and reported on August 4, 1948 (L.G., Oct., 1948, p. 1104). The majority report of the Conciliation Board recommended acceptance of the Company's offer of an increase of \$30 per month for all Captains; an additional \$100 per month for Captains operating four-engine "North Star" aircraft; and the creation of a new classification of "Reserve Captain", comprising a group of senior First Officers, to receive \$400 per month, or \$30 above the top of the existing salary range for First Officers. The recommendations of the Conciliation Board were acceptable to Trans-Canada Air Lines but were

rejected by the Pilots' Association. Further negotiations then took place from time to time.

Full details of the terms of settlement of the dispute were not available when the LABOUR GAZETTE went to press, but it was reported in brief that they included an increase of \$30 per month for Captains of D.C. 3 aircraft, increases of \$30 per month for First Officers, including those in trans-Atlantic service, and the payment of a differential of \$100 per month to Captains of D.C. 4 aircraft over and above the salaries of D.C. 3 Captains. Previously, the salary scale for Captains operating D.C. 3 aircraft ranged from a starting rate of \$420 per month up to \$720 per month after thirty months' service (with \$50 per month additional for mountain operations) while First Officers of such aircraft received from \$270 per month up to \$370 per month after twelve months' service.

* * *

Among proceedings before the Canada Labour Relations Board, the most noteworthy case was the granting of an application for certification made by the Federation of Telephone Workers of British Columbia in respect of all plant, traffic and clerical employees of the British Columbia Telephone Company. Some 3,600 workers were covered in the bargaining unit, which excluded persons employed in a managerial, confidential or professional capacity. Earlier, the Canada Labour Relations Board had satisfied itself that it had jurisdiction over the operations of the Company in view of the fact that it had been declared by Parliament to be a work for the general advantage of Canada.

* * *

During the month the Conciliation Board under the chairmanship of Hon. Mr. Justice J. O. Wilson, of Vancouver, resumed hearings in Montreal in connection with the

dispute between the Canadian Seamen's Union and various shipowners operating deepsea dry cargo vessels on the East and West Coasts (L.G., Dec., 1948, p. 1413, *et seq.*). The same Conciliation Board was scheduled to proceed with hearings in the dispute between Canadian National Steamships and Canadian Pacific Steamships and the Canadian Seamen's Union, as representing unlicensed personnel employed on the companies' passenger vessels operating from East Coast ports (L.G., Feb., 1949, p. 173).

Conciliation Proceedings Under the Wartime Labour Relations Regulations, P.C. 1003

The following is the final statement of all conciliation proceedings under the Wartime Labour Relations Regulations, P.C. 1003, covering the period March 20, 1944 to August 31, 1948. During this period, it will be recalled, the Dominion authorities and the majority of the provincial authorities, entered into arrangements whereby the Dominion Minister of Labour provided conciliation services at the request of the provincial Ministers of Labour.

It will also be recalled that the wartime Regulations were revoked except as to matters pending on the coming into force of the Industrial Relations and Disputes Investigation Act on September 1 of last year.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the wartime Regulations in 1944.

Proceedings begun under the wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Addi-

tionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements, and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the

provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; an officer stationed in Winnipeg covers the provinces of Saskatchewan and Manitoba and Northwestern Ontario; two officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec and the officer resident in Fredericton, represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of January. During the month, the Board received five applications for certification, held three hearings, issued three certificates designating bargaining agents, ordered a representation vote, rejected four applications for certification and allowed the withdrawal of three applications.

Applications for Certification Granted

1. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees for a unit of employees of the Canadian Pacific Railway Company, comprising clerical employees in the General Office, Angus Shops Stores, Montreal, P.Q., in the occupational classifications of clerk, stenographer, typist and office boy. The chief clerk and the assistant chief clerk were excluded from the bargaining unit.

2. Federation of Telephone Workers of British Columbia for a unit of some 3,600 employees of the British Columbia Telephone Company, comprising various occupational classifications. Employees in the managerial, professional, confidential and

supervisory categories were excluded from the bargaining unit.

3. International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers' of America, Local 119, for a unit of employees of the Biggar Brothers Freight Lines, Winnipeg, Man., comprising freight line drivers.

Representation Vote Ordered

Canadian Seamen's Union and Maritime Towing and Salvage Limited, Halifax, N.S. (L.G., Dec., 1948, p. 1411). Following an investigation of the application and a public hearing, the Board ordered a representation vote among the unlicensed personnel aboard the vessels *Banscot*, *Bansturdy*, *Bansun*, *Bansaga*, *Banswift*, *Banstar*, *Banspray II* and *Foundation Wallace* of the Maritime Towing and Salvage Limited, Halifax, N.S. (Returning Officer: H. R. Pettigrove.)

Applications for Certification Rejected

1. Transport Drivers, Warehousemen and Helpers' Union (Local 106, International Brotherhood of Teamsters, Chauffeurs,

Warehousemen and Helpers' of America) and Maislin Brothers, Montreal, P.Q. (L.G., Oct., 1948, p. 1103). Following an investigation of the application, a public hearing and a representation vote, the Board rejected the application for the reason that it was not supported by a majority of the employees affected.

2. United Fishermen and Allied Workers' Union (TLC) and Western Whaling Corporation, Vancouver, B.C. (L.G., Dec., 1948, p. 1411). Following an investigation of the application, the Board rejected the application for the reason that the personnel affected were no longer employed at the date of the application.

3. Transport Drivers, Warehousemen & Helpers' Union and General Truck Drivers' Union (Locals 106 and 938, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America) and Taggart Service Limited, Ottawa, Ontario (L.G., Jan., 1949, p. 45). Following an investigation of the application, dated November 5, 1948, and a public hearing, the Board rejected the application.

4. Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees and National Harbours Board, Quebec, P.Q. (L.G., Feb., 1949, p. 172). Following an investigation of the application and a public hearing the Board rejected the application. Reasons for Judgment will be issued at a later date.

Applications for Certification Withdrawn

1. Montreal Harbour Staff Employees' Association and National Harbours Board, Montreal, P.Q., (L.G., Dec., 1948, p. 1411). On the request of the President of the Association, the application was withdrawn.

2. Association of Marine Employees of Canadian Dredge and Dock Company Limited, and Canadian Dredge & Dock Company, Limited, Toronto, Ontario (L.G.,

Feb., 1949, p. 172. On the request of the Chairman of the Association, the application was withdrawn.

3. Canadian Seamen's Union and Foundation Maritime Limited, Halifax, N.S., and Moran Towing and Transportation Company, New York, N.Y. (L.G., Feb., 1949, p. 172). On the request of the Vice-President of the Union, the application was withdrawn.

Applications for Certification Received During the Month of January, 1949

1. Canadian Brotherhood of Railway Employees and Other Transport Workers for employees of McArthur & Son Transport Limited, Brandon, Manitoba. (Investigating Officer: R. H. Hooper.)

2. Marine Checkers & Weighers' Association (Local 506, International Longshoremen's & Warehousemen's Union) for freight checkers discharging and/or loading from dock and shed to ships operated by Union Steamships Limited, Vancouver, B.C. (Investigating Officer: G. R. Currie.)

3. Catholic Union of Garage Employees of the Quebec Railway, Light & Power Company, Inc., for garage employees of the Quebec Railway, Light & Power Company, Inc., Quebec, P.Q. (Investigating Officer: L. Pepin.)

4. Conciliation and Other Proceedings Before the Minister of Labour

Appointment of Conciliation Officer

On January 22, 1949, the Minister of Labour appointed G. R. Currie, Vancouver, B.C., a Conciliation Officer under Section 16 of the Industrial Relations and Disputes Investigation Act to deal with a dispute between S. H. Rich, of Vancouver, a coal contractor for the Canadian Pacific Railway

Company, and the Brotherhood of Maintenance-of-Way Employees (AFL-TLC).

Agreement Facilitated by Conciliation Officer

On January 7, 1949, the Minister of Labour received a report from R. H. Hooper, Conciliation Officer, indicating the settlement of matters in dispute between

Northwest Airlines, Inc., and the Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC), representing transportation agents employed by the Company at Edmonton, Alta. (L.G., Jan., 1949, p. 51.)

Conciliation Board Appointed

On January 19, 1949, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between the Quebec Railway, Light & Power Company, Quebec, P.Q., and employees in its Tramways and Autobus Division who are represented by the National Catholic Brotherhood of Transport Employees of Quebec, Inc. (CCCL). The Board was appointed following receipt of the report of Liguori Pepin, Conciliation Officer (L.G., Feb., 1949, p. 172). Constitution of the Board had not been completed at the end of the month.

Conciliation Board Reports Received

On January 25, 1949, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed

to deal with a dispute between the Temiscouata Railway Company and its employees who are represented by the Canadian Brotherhood of Railway Employees & Other Transport Workers (CCL) (L.G., Jan., 1949, p. 52). The text of the Board's report is reproduced below.

On January 25, 1949, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between the Temiscouata Railway Company and its employees who are represented by the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen & Enginemen and the Brotherhood of Railroad Trainmen (L.G., Feb., 1949, p. 173). The text of the Board's report is reproduced below.

Settlement Following Board Procedure

During January, advice was received that matters in dispute between Trans-Canada Air Lines and its employees who are represented by the Canadian Airline Pilots' Association had been settled as a result of further negotiations following receipt by the parties of the report of the Conciliation Board which dealt with the dispute (L.G., Oct., 1948, pp. 1104-1121).

REPORT OF BOARD in dispute between

**Temiscouata Railway Company,
and**

Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL).

The Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.
Sir,

Pursuant to its appointment your Board convened at Ottawa for organization purposes on December 8, 1948, and held conferences with representatives of the parties on December 9 and 10.

The Employees were represented by Mr. Frank H. Gillespie, General Chairman, and the Company by Mr. Charles A. Stewart, President and Managing Director.

After hearing and considering the representations of the parties as submitted, with their consent the Board adjourned to meet again in Ottawa on January 11, 1949, in order that there might be compiled certain data requested by the Board, including approximate figures covering the financial results of the Company's operations for the year 1948.

The Board again conferred with representatives of the parties on January 11 and

On January 25, 1949, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between the Temiscouata Railway Company and the Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL) (L.G., Jan., 1949, p. 52). The Board was composed of J. H. Stitt, Ottawa, Chairman, George Hodge, Montreal, member representing the employer viewpoint, and A. Andras, Ottawa, member representing the employee viewpoint.

The text of the Board's report is reproduced below.

12 and heard their further representations. At this time there were submitted on behalf of the Company, statements covering the data requested by the Board as mentioned together with other additional

information. These statements may be of interest and service to you in your consideration of the Board's report, and they are attached hereto as Exhibit "A".

Following conclusion of hearing on January 12 the Board decided, again with the consent of the parties, that it should defer the preparation and submission of its report in this case until it had heard the submissions in the matter of a dispute between the Company and its train service classes of employees with which the same Board had been appointed to deal, arrangements being made for the hearing in this latter case to be held in Ottawa commencing January 19.

In the present case it was made clear to the Board that the only matter it was called upon to consider was the claim on behalf of the employees for an increase in wage rates of 20 cents per hour.

It was immediately made evident that excellent relationships existed between the Company and its employees as shown by the following extracts from the submission made on behalf of the employees:—

The relationship between the Management of the Temiscouata and the Brotherhood has always been a very cordial one.

There has always been a considerable differential between wage rates paid on the Temiscouata and on the Canadian National Railways. During the past few years this differential has widened. On the other hand, the duties performed by similar classes of workers on both Railways are much the same and carry the same degree of responsibility.

The Brotherhood is not asking for a wage increase which would equalize Temiscouata wage rates with those of the CNR. Even if the whole 20-cent increase asked for was granted, the resulting wage rates would still be considerably below the wage rates paid by the CNR.

An increase in wage rates of 17 cents per hour would maintain the same differentials between Temiscouata and Canadian National wage rates as existed immediately preceding the making effective on March 1, 1948, of an increase of 17 cents per hour for practically all classes of employees of the principal Canadian Railways.

The representative of the Temiscouata Railway frankly stated to the Board that except for the most unfortunate financial position in which the Company finds itself it could readily reach agreement with the representatives of its employees in respect of their claims for increases in wage rates, but maintained that in view of existing and prospective conditions, it was altogether

impossible to assume any increased operating costs. In support of this position attention was especially drawn to various conditions and facts as indicated and confirmed by the statements submitted to the Board already referred to as Exhibit "A" of this report.

Some of the more important and pertinent features of these statements might be summarized as follows:—

The Capital Structure of the Company, pursuant to Acts of Parliament, was reconstituted in 1904 and 1907, and is now represented by Consolidated Mortgage Income Bonds, carrying voting power, in the amount of \$2,856,335. It was stated to the Board that the authorized Bond Issue included an amount to cover unpaid interest at 1907. The maturity date of the Bonds is July 1, 1950. It is further stated that by the Act authorizing issue of Bonds all profits and earnings of the Railway as ascertained at the close of each financial year, after payment of current and running expenses and other sums properly chargeable to revenue and making all necessary provisions for repairs and renewals shall be from time to time applied in or towards payment of interest at the rate of 5 per cent for the year, but not any arrears for any than past year. (See Exhibit "A", Page 7.) The Board was informed that the Company's reconstituted Capital Structure as mentioned in effect wiped out the \$1,000,000 Capital Stock.

Over a period of twenty-three years from 1907 to 1930 inclusive the total interest paid on the Company's Bonds amounted to 20½ per cent, or less than an average of 1 per cent per annum, and since 1930 no interest whatever has been paid. (See Exhibit "A", Pages 7 and 21.)

The approximate Income Accounts for 1948 show a deficit of \$218.02 as a result of the year's operations, while the Operating Accounts covering Earnings and Expenses indicate a deficit of \$8,713.11. The Gross Earnings in 1948 were almost a peak record, and although nearly \$70,000 over 1947 the deficit was approximately \$6,000 in excess of the deficit in that year. (See Exhibit "A", Pages 3 and 23.)

For 1948 the estimated value to the Company of the so-called 21 per cent increase in Freight Rates, as authorized by the Board of Transport Commissioners, effective April 8, 1948, amounted to \$36,160.05. If the increase had been in effect for the entire year it is estimated the increased revenue would have amounted to \$45,668.40. Notwithstanding increased freight rates the consequent revenues were more than offset by increased working expenses and in the later months of the year by falling off in traffic due to market conditions for forest products which constitute about 80 per cent of the Company's revenue traffic. Because of prevailing conditions the Company is fearful of a continuing decrease in revenues for the immediate future. (See Exhibit "A", Pages 3, 22 and 23.)

It is estimated that to apply an increase of 20 cents per hour in wage rates to the Company's employees represented in the present case would cost \$52,285.56 per annum, while if the same increase were to be applied to all classes of the Company's employees the cost would amount to \$78,896.40. (See Exhibit "A", Page 12.)

The ratio of payroll costs to revenues is higher on the Temiscouata than on the Canadian National, the figures for the year 1947 being 60 per cent and 54.5 per cent respectively.

Increases in wage rates have been granted on the Temiscouata Railway since 1939, although not equal to those made effective on the principal Canadian Railways during the same period. (See Exhibit "A", Pages 13 and 14.)

Due to the difficulties with which the Company has had to contend the Railway property has not been maintained in a condition to be desired, and this is evidently becoming a cause for some anxiety having regard for safe operations. In 1944 after a survey of conditions by an "outside railway engineer" it was estimated that to overtake deferred maintenance would cost approximately \$760,000. It was stated to the Board that under existing conditions the cost would probably be in the vicinity of \$1,000,000. To meet this condition there is available in Operating Reserves an amount of only approximately \$140,000. The Bondholders authorized the setting aside of Net Revenues over a period of years for these Operating Reserves notwithstanding the provisions of the Act as already mentioned in respect of the payment of interest on Bonds. (See Exhibit "A", Page 11.) It was stated to the Board that the funds available as Operating Reserves would already have been expended for necessary maintenance work if suitable labour were available at wage rates the Company could pay; the work will be undertaken as soon as such labour can be secured. (Since the hearing of the case by the Board it has been brought to its attention that during the first two weeks of January, 1949, Operating Revenues of the Company have shown such a sharp decline, which due to market conditions for forest products it is feared will continue, that having regard to this condition it is anticipated Operating Reserves will necessarily have to be drawn upon in substantial amounts even during the first six months of the year, probably approximating \$50,000, to meet essential maintenance and current payroll costs.)

The conditions as shown indicate the seriousness of the problem which the Company is faced in the consideration of demands from their employees for further increases in wage rates, as they also do the difficulties confronting this Board in making any recommendations for the disposition of the matter referred to it.

Conditions similar to those now existing arose in 1945 in respect of an application

on behalf of the same classes of Employees of the Temiscouata Railway now concerned to the National War Labour Board under the provisions of the Wartime Wages Control Order then in effect. The Board dealt with the application under its Case No. 2N-799 and in its "Reasons for Decision" under date of May 24, 1945, stated as follows:—

"This is an application by the Brotherhood made on behalf of the employees of the railway not employed in the running trades for an increase of 6 cents per hour over the present rates of pay, retroactive to September 15, 1943, and for two weeks vacation with pay.

"By the decision in Case File N-1300 the railways affected thereby were directed to increase their rates by 6 cents per hour. That decision applied to the running trades of this railway company but not to the classifications covered by this application, which is based on an alleged gross inequality and gross injustice.

"There is no dispute as to the existence of a gross inequality or gross injustice and it is well established. The Company, however, opposes the application for the increase on the ground of its inability to pay. Section 20 (2) of the governing Order, P.C. 9384, sets out the duty of the Board in matters of this sort and is as follows:—

In considering any application to authorize or direct an increase in wage rates under this section, the National Board shall take into account the probable effect of such increase in wage rates on the cost of living and on the cost of production or operation of the business or industry in which the increased rates are to be paid, and shall require any employer who alleges that the proposed increase in wage rates will be beyond his ability to pay without increasing the price of his products or services rendered by him, to present evidence in writing demonstrating the basis of such statements and setting out the amount of the increase in the price of his products or services for authorization of which it will be necessary for him to apply if the proposed increase in wage rates is made. No decision of the National Board under this section shall be construed as imposing an obligation on or implying a commitment on the part of any other agency or government.

"The evidence in our opinion amply demonstrates the inability of the company to pay increased rates. The Brotherhood did not attempt to refute the statements of the company in this regard but urged that the company should seek relief by applying to the proper authority for permission to increase its rates or, alternatively, to apply for a subsidy, which, if granted, might enable the company to pay the proposed increased rates and still remain in business.

"We are of the opinion, that, while a gross inequality or gross injustice has been established, there is also proof of the most positive character that the company is financially unable to pay the increased rates and that it is not the function of the Board to make directions which the company is unable to carry out without the benefit of governmental assistance—the securing of which would be quite uncertain.

"For the reasons above stated, the application for a wage increase will have to be denied.

"With respect to the request for vacations with pay, we are of the opinion that a plan for one week under the terms and conditions of D.B. 17 should be authorized.

"Finding and Direction will issue accordingly."

If it had not been demonstrated that the Company is financially unable to undertake them the Board would not hesitate to recommend that the Employees be granted increases in wage rates at least approximating the claim as submitted, and indeed it has been stated on behalf of the Company that under such conditions wage rates would have been adjusted accordingly without the necessity for any proceedings under the provisions of the "Industrial Relations and Disputes Investigation Act." The Board is of the opinion that it would not serve any purpose for it to recommend increases in wage rates in any amount when it has been so patently shown that funds are not available to meet any such increase.

However, the Board does record its concurrence in the views expressed by the National War Labour Board as mentioned, and its belief that if the continued operation of the Temiscouata Railway is deemed to be necessary as a public service some such action as indicated will be unavoidable. It was stated to the Board that the Railway is a necessary service in the area it serves and that it cannot wholly be replaced by any other means of transport; its principal freight traffic, lumber and other forest products, requires railway facilities for shipping, and in more recent years the Temiscouata Railway has been enabled to render this service only by concessions made to it by the Canadian National and Canadian Pacific Railways in constructive mileage allowances on divisions of through freight rates and in car hire charges any further extensions of which cannot reasonably be claimed. The Board does not consider it to be within its functions to determine the means by which any arrangements as indicated for the continued operation of the Railway as a public service can best be developed or to express any opinion in relation thereto.

Considering the possibility of traffic conditions being maintained or even improving, rather than decreasing as contemplated by the Management, as well as the further possibility of increased revenues as a result of the application of the Canadian Railways to the Board of Transport Commissioners for authority to increase freight rates, and pending possible developments towards meeting the conditions of the Company's financial situation as indicated, the Board recommends that the Company and the Employees should enter into an agreement that at least 60 per cent of any net operating revenue of the Company (60% being the latest established ratio of the Company's payrolls to gross revenues) for the year 1949 should be set aside for the benefit of all classes of the Company's employees to be shared by each employee holding employment relationship with the Company at December 31, 1949, on some definitely established basis such as, for instance, *pro rata* in relation to the number of hours or days worked by each during the year. If the parties decide to enter into such an agreement as indicated the Board further recommends that in the determination of any net operating revenues for such purpose, it would be reasonable to provide that any charges for the maintenance of the property beyond some established basis, say per mile of road during 1948 or the average over some period of years up to and including 1948, should be a charge against Operating Reserves.

In conclusion the Board desires to record its appreciation of the evident good will existing between the Management and the Employees. This is the more remarkable having regard to the difficult financial conditions under which the Company is operating together with the fact that the Employees are being paid at such lower rates than those prevailing on the principal Canadian railways.

The Board recognizes the moral justification for the contention of the Employees, that, at the very least, the differentials which have hitherto prevailed between them and like classes of service on other Canadian railways should not be increased.

Respectfully submitted.

(Sgd.) JAMES H. STITT,
Chairman.

(Sgd.) A. ANDRAS,
Member.

(Sgd.) G. HODGE,
Member.

REPORT OF BOARD in dispute between

**Temiscouata Railway Company
and**

**Brotherhood of Locomotive Engineers, the Brotherhood of
Locomotive Firemen and Enginemen and the Brotherhood of
Railroad Trainmen.**

The Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.
SIR,

Pursuant to its appointment, and in accordance with mutual arrangement to meet the convenience of the parties, your Board convened at Ottawa on January 19, 1949, for organization purposes, and proceeded immediately with the hearing of the case.

The Employees were represented by:

Mr. W. G. Graham, Vice-President,
Brotherhood of Locomotive Firemen
& Enginemen.

Mr. J. J. Hendrick, Vice-President,
Brotherhood of Railroad Trainmen.

Mr. U. W. Carpenter, Assistant Grand
Chief Engineer, Brotherhood of Loco-
motive Engineers.

The Company was represented by Mr.
Charles A. Stewart, President and
Managing Director.

The representations of the parties were made at one sitting of the Board, the representatives of the Employees stating it was not their desire to submit any rebuttal statement. The Company's submission included copies of statements covering data requested by the Board in another similar case of dispute between the Company and other classes of employees with which it had been appointed to deal. Copies of these statements are attached to this report as Exhibit "A".

The claim of the employees in this case is for a revision of their agreement with the Company for the purpose of effecting the following changes therein:—

(1) That effective July 1, 1948, the rates of pay now in effect which include the cost-of-living bonus effective February 15, 1944, the wage increase effective July 16, 1947, which are now considered to be the existing basic rates of pay to be increased in the amount of 35 cents per hour.

(2) That existing differentials, special allowances, arbitraries, and working conditions and rulings be retained and amount of increase requested applied to same, also effective July 1, 1948.

(3) That new rulings be included as to make effective punitive overtime, monthly

On January 25, 1949, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between the Temiscouata Railway Company and the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Railroad Trainmen (L.G., Feb., 1949, p. 173). The Board was composed of J. H. Stitt, Ottawa, Chairman, George Hodge, Montreal, member representing the employer viewpoint, and A. Andras, Ottawa, member representing the employee viewpoint.

The text of the Board's report is reproduced below.

guarantee, consist of crew, and 15 days' vacation with pay.

It developed during the hearing that an increase in wage rates of 17 cents per hour, without any change in agreement rules, would maintain the same differentials and comparative working conditions between Temiscouata and Canadian National Railways as existed immediately preceding the making effective on March 1, 1948, of an increase of 17 cents per hour for practically all classes of employees on the principal Canadian Railways.

The representative of the Temiscouata Railway stated to the Board that except for the most unfortunate financial position in which the Company finds itself it could reach agreement with the representatives of the employees in respect of their claim for increases in wage rates, but maintained that in view of existing and prospective conditions it was altogether impossible to assume any increased operating costs. In support of this position, attention was especially drawn to various conditions and facts as indicated and confirmed by the statements submitted to the Board already referred to as Exhibit "A" of this Report.

Some of the more important and pertinent features of these statements might be summarized as follows:—

The Capital Structure of the Company, pursuant to Acts of Parliament, was reconstituted in 1904 and 1907, and is now represented by Consolidated Mortgage Income Bonds, carrying voting power, in the amount

of \$2,856,335. It was stated to the Board that the authorized Bond issue included an amount to cover unpaid interest at 1907. The maturity date of the Bonds is July 1, 1950. It is further stated that by the Act authorizing issue of Bonds all profits and earnings of the Railway as ascertained at the close of each financial year, after payment of current and running expenses and other sums properly chargeable to revenue and making all necessary provisions for repairs and renewals shall be from time to time applied in or towards payment of interest at the rate of 5 per cent for the year, but not any arrears for any than past year. (See Exhibit "A", Page 7.) The Board was informed that the Company's reconstituted Capital Structure as mentioned in effect wiped out the \$1,000,000 Capital Stock.

Over a period of twenty-three years from 1907 to 1930 inclusive the total interest paid on the Company's Bonds amounted to 20½ per cent, or less than an average of 1 per cent per annum, and since 1930 no interest whatever has been paid. (See Exhibit "A", Pages 7 and 21.)

The approximate Income Accounts for 1948 show a deficit of \$218.02 as a result of the year's operations, while the Operating Accounts covering Earnings and Expenses indicate a deficit of \$8,713.11. The Gross Earnings of 1948 were almost a peak record, and although nearly \$70,000 over 1947 the deficit was approximately \$6,000 in excess of the deficit in that year. (See Exhibit "A", Pages 3 and 23.)

For 1948 the estimated value to the Company of the so-called 21 per cent increase in Freight Rates, as authorized by the Board of Transport Commissioners, effective April 8, 1948, amounted to \$36,160.05. If the increase had been in effect for the entire year it is estimated the increased revenue would have amounted to \$45,668.40. Notwithstanding increased freight rates the consequent revenues were more than offset by increased working expenses and in the later months of the year by falling off in traffic due to market conditions for forest products which constitute about 80 per cent of the Company's revenue traffic. Because of prevailing conditions the Company is fearful of a continuing decrease in revenues for the immediate future. (See Exhibit "A", Pages 3, 22 and 23.)

It is estimated that to apply an increase of 20 cents per hour in wage rates to the Company's employees represented in the present case would cost \$14,548.84 per annum, while if the same increase were to be applied to all classes of the Company's employees the cost would amount to \$78,896.40. (See Exhibit "A", Page 12.) (It was further intimated to the Board that in the present case alone the claims of the employees would represent an increased operating cost of approximately \$39,000 per annum for an average of 20 employees.)

The ratio of payroll costs to revenues is higher on the Temiscouata than on the Canadian National, the figures for the year 1947 being 60 per cent and 54.5 per cent respectively.

Increases in wage rates have been granted on the Temiscouata Railway since 1939, although not equal to those made effective

on the principal Canadian Railways during the same period. (See Exhibit "A", Pages 13 and 14.)

Due to the difficulties with which the Company has had to contend, the Railway property has not been maintained in a condition to be desired, and this is evidently becoming a cause for some anxiety having regard for safe operation. In 1944 after a survey of conditions by an "outside railway engineer" it was estimated that to overtake deferred maintenance it would cost approximately \$760,000. It was stated to the Board that under existing conditions the cost would probably be in the vicinity of \$1,000,000. To meet this condition there is available in Operating Reserves an amount of only approximately \$140,000. The Bondholders authorized the setting aside of Net Revenues over a period of years for these Operating Reserves notwithstanding the provisions of the Act as already mentioned in respect of the payment of interest on Bonds. (See Exhibit "A", Page 11.) It was stated to the Board that the funds available as Operating Reserves would already have been expended for necessary maintenance work if suitable labour were available at wage rates the Company could pay; the work will be undertaken as soon as such labour can be secured. (Since the statements covered by Exhibit "A" were prepared it has been brought to the attention of the Board that during the first two weeks of January, 1949, Operating Revenues of the Company have shown such a sharp decline, which due to market conditions for forest products, it is feared will continue, that having regard to this condition it is anticipated Operating Reserves will necessarily have to be drawn upon in substantial amounts during the first six months of the year, probably approximating \$50,000, to meet essential maintenance and current payroll costs.)

The conditions as shown indicate the seriousness of the problem with which the Company is faced in the consideration of demands from their employees for further increases in wage rates, as they also do the difficulties confronting this Board in making any recommendations for the disposition of the matter referred to it

Conditions similar to those now existing arose in 1945 in respect of an application on behalf of other classes of Employees of the Temiscouata Railway now concerned to the National War Labour Board under the provisions of the Wartime Wages Control Order then in effect. The Board dealt with the application under its Case No 2N-799

and in its "Reasons for Decision" under date of May 24, 1945, stated as follows:—

"This is an application by the Brotherhood made on behalf of the employees of the railway not employed in the running trades for an increase of 6 cents per hour over the present rates of pay, retroactive to September 15, 1943, and for two weeks vacation with pay.

"By the decision in Case File N-1300 the railways affected thereby were directed to increase their rates by 6 cents per hour. That decision applied to the running trades of this railway company but not to the classifications covered by this application, which is based on an alleged gross inequality and gross injustice.

"There is no dispute as to the existence of a gross inequality or gross injustice and it is well established. The Company, however, opposes the application for the increase on the ground of its inability to pay. Section 20 (2) of the governing Order, P.C. 9384, sets out the duty of the Board in matters of this sort and is as follows:—

In considering any application to authorize or direct an increase in wage rates under this section, the National Board shall take into account the probable effect of such increase in wage rates on the cost of living and on the cost of production or operation of the business or industry in which the increased rates are to be paid, and shall require any employer who alleges that the proposed increase in wage rates will be beyond his ability to pay without increasing the price of his products or services rendered by him, to present evidence in writing demonstrating the basis of such statements and setting out the amount of the increase in the price of his products or services for authorization of which it will be necessary for him to apply if the proposed increase in wage rates is made. No decision of the National Board under this section shall be construed as imposing an obligation on or implying a commitment on the part of any other agency of government.

"The evidence in our opinion amply demonstrates the inability of the company to pay increased rates. The Brotherhood did not attempt to refute the statements of the company in this regard but urged that the company should seek relief by applying to the proper authority for permission to increase its rates or alternatively, to apply for a subsidy, which, if granted, might enable the company to pay the proposed increased rates and still remain in business.

"We are of the opinion that, while a gross inequality or gross injustice has been established, there is also proof of the most positive character that the company is financially unable to pay the increased rates and that it is not the function of the Board to make directions which the company is unable to carry out without the benefit of governmental assistance—the securing of which would be quite uncertain.

"For the reasons above stated, the application for a wage increase will have to be denied.

"With respect to the request for vacations with pay, we are of the opinion that a plan for one week under the terms and conditions of D.B. 17 should be authorized.

"Finding and Direction will issue accordingly."

If it had not been demonstrated that the Company is financially unable to undertake them the Board would not hesitate to recommend that the employees be granted increases in wage rates at least approximating the claim as submitted, and indeed it has been stated on behalf of the Company that under such conditions wage rates would have been adjusted accordingly without the necessity for any proceedings under the provisions of the "Industrial Relations and Disputes Investigation Act." The Board is of the opinion that it would not serve any purpose for it to recommend increases in wage rates in any amount when it has been so patently shown that funds are not available to meet any such increases.

However, the Board does record its concurrence in the views expressed by the National War Labour Board as mentioned, and its belief that if the continued operation of the Temiscouata Railway is deemed to be necessary as a public service some such action as indicated will be unavoidable. It was stated to the Board that the Railway is a necessary service in the area it serves and that it cannot wholly be replaced by any other means of transport; its principal freight traffic, lumber and other forest products, requires railway facilities for shipping, and in more recent years the Temiscouata Railway has been enabled to render this service only by concessions made to it by the Canadian National and Canadian Pacific Railways in constructive mileage allowances on divisions of through freight rates, and in car hire charges, any further extensions of which cannot reasonably be claimed. The Board does not consider it to be within its functions to determine the means by which any arrangements as indicated for the continued operation of the Railway as a public service can best be developed or to express any opinion in relation thereto.

Considering the possibility of traffic conditions being maintained or even improving, rather than decreasing as contemplated by the Management, as well as the further possibility of increased revenues as a result of the application of the Canadian Railways to the Board of Transport Commissioners for authority to increase freight rates, and pending possible developments towards meeting the conditions of the Company's financial situation as indicated, the Board recommends that the Company and the employees should enter into an agreement that at least 60 per cent of any net operating revenue of the Company (60% being the latest established ratio of the Company's payrolls to gross revenues) for

the year 1949 should be set aside for the benefit of all classes of the Company's employees to be shared by each employee holding employment relationship with the Company at December 31, 1949, on some definitely established basis such as, for instance, *pro rata* in relation to the number of hours or days worked by each during the year. If the parties decide to enter into such an agreement, as indicated, the Board further recommends that in the determination of any net operating revenues for such purpose it would be reasonable to provide that any charges for maintenance of the property beyond some established basis, say per mile of road during 1948 or the average over some period of years up to and including 1948, should be a charge against Operating Reserves.

In conclusion the Board desires to record its appreciation of the evident good will existing between the Management and the

employees. This is the more remarkable having regard to the difficult financial conditions under which the Company is operating together with the fact that the employees are being paid at much lower rates than those prevailing on the principal Canadian Railways.

The Board recognizes the moral justification for the contention of the employees, that, at the very least, the differentials which have hitherto prevailed between them and like classes of service on other Canadian Railways should not be increased.

Respectfully submitted.

(Sgd.) JAMES H. STITT,
Chairman.

(Sgd.) A. ANDRAS,
Member.

(Sgd.) G. HODGE,
Member.

COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

Recent Collective Agreements

A file of collective agreements is maintained in the Research and Statistics Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc. are summarized in separate articles following this.

Mining

Metal Mining

STEEP ROCK LAKE, ONT.—STEEP ROCK IRON MINES LTD. AND UNITED STEELWORKERS OF AMERICA, LOCAL 3466.

Agreement to be in effect from August 1, 1948, to July 31, 1949, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect (L.G., March, 1947, p. 366), with the following changes—*statutory holidays* observed were increased from 5 to 6 in 1947.

Vacation with pay was also changed in 1947, so that an employee receives 8 days after 2 years' service, 10 days after 3 years' service and the maximum of 12 days after 4 years' service instead of after 7 years' service as formerly. *Hourly wage rates* were increased in 1947 and again in 1948. The minimum rates for certain classifications are as follows

Two agreements summarized this month contain modifications of the Rand Formula (L.G., Jan., 1946, p. 123). These agreements are between certain unions and Gainers Limited and De Havilland Aircraft of Canada Limited. General Steel Wares Limited has an unusual check-off provision in that the compulsory check-off applies to employees who entered the employment of the company prior to November 1, 1939; the employees hired after that date must become and remain union members and for them the check-off is only made on individual authorization.

—labourers 95 cents, laboratory crushermen 96 cents, helpers 98 cents, burners \$1.01, mechanics \$1.03, truck drivers (light), tractor operators \$1.04, electricians \$1.05, pipefitters \$1.08, stationary engineers (fourth class) \$1.10, welders \$1.12, pneumatic drillers, blacksmiths \$1.14, carpenters, truck drivers (heavy) \$1.15, powdermen \$1.16, machinists, riggers, hydraulic miners, linemen \$1.17, scalers, painters, crushermen \$1.19, electricians \$1.21, carpenters, blacksmiths (grade 1) \$1.25, welders \$1.28, mechanics \$1.24 and \$1.29, machinists \$1.32, electricians (grade 1) \$1.38. *Off-shift premiums*: 5 cents per hour extra will be paid employees regularly employed on afternoon or night shifts.

Manufacturing

Tobacco and Liquors

MONTREAL, P.Q.—DISTILLERS CORPORATION LIMITED AND DISTILLERY, RECTIFYING AND WINE WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL 64.

Agreement to be in effect from July 6, 1948, to July 6, 1950, and thereafter from year to year subject to 60 days' notice. The "wages section" of the agreement may be opened for discussion by either party to the agreement by giving not less than 60 days' notice prior to July 6, 1949. *Union shop*: only members of the union in good standing will be retained by the company. The union shall be the sole judge of the good standing of its members. Any employees hired subsequent to the signing of the agreement shall become members of the union upon completion of probationary period of 90 days.

Hours of work: 8 per day Monday through Friday where possible. *Overtime*: time and one-half to all hourly-rated employees for work in excess of regular daily hours; double time for work on Sunday or on the day of rest for shift workers (the second day of their 2 days off), and for time worked over a basic day for work performed on 8 specified holidays, which are paid holidays for permanent employees who work the days immediately preceding and following the holiday. *Vacation with pay*: all employees will be granted vacations with pay in accordance with provincial ordinance and additional provisions including 2 weeks vacation to all employees with more than 3 years' service at May 1, with pay equal to 2 per cent of their earnings during previous 12 months for first week and 2 per cent of their earnings for the period over 3 years as payment for the second week of vacation. Employees with 4 or more years' service shall receive 4 per cent of earnings during the previous 12 months. Certified illness of a week or more shall be counted as time worked for the purpose of computing vacation pay for all employees with 5 or more years' continuous service.

Hourly wage rates for certain classes—miscellaneous labour 90 cents at start, 94 cents after 3 months, 99 cents after six months; bottling and laundry women 70, 72 and 76 cents respectively; bottling men 96 cents, \$1.01 and \$1.05 respectively; blenders \$1.24; electricians, steamfitters, welders, bricklayers, millwrights, coppermiths, auto mechanics \$1.47; spray painters, blacksmiths \$1.41; bottling mechanics, painters \$1.36; coopers \$1.24 to \$1.47; stationary engineers (second class) \$1.50; oilers and firemen \$1.28; truck drivers \$1.07; semi-skilled labour \$1.07 to \$1.28.

Provision is made for *seniority rights* and *grievance procedure*.

Rubber and Its Products

TORONTO, ONT.—GUTTA PERCHA AND RUBBER, LIMITED AND UNITED OFFICE AND PROFESSIONAL WORKERS OF AMERICA, LOCAL 195.

Agreement to be in effect from June 1, 1948, to May 31, 1949, and thereafter subject to notice. There shall be no discrimination, intimidation, restraint or coercion by the company or the union because of membership or non-membership in the union. Such

membership is to be an entirely voluntary act of each individual employee. *Check-off*: the company will make arrangements for the deduction of the initiation fee and regular monthly union dues from the pay of employees who so authorize.

Hours of work: 7½ hours per day Monday through Friday, a 37½-hour week. *Vacation with pay*: 2 weeks to employees with one year's service. An employee engaged after July 1 of previous year will receive 4 per cent of earnings from date of engagement to July 1 of current year (maximum—2 weeks' salary), employees engaged after January 1 of current year receive one week's vacation. Where a holiday, recognized by the company, which is observed on any day from Monday to Friday inclusive, occurs during an employee's vacation period the employee will be entitled to take an additional day's vacation at the discretion of employee's supervisor. An employee who has served one or more years prior to July 1 of current year and whose duties require him to work Saturday mornings—one only Saturday morning, commencing vacation period will be allowed with pay.

Weekly wage rates for grade 1 employees range from \$20 at start to \$22 after 6 months, grade 2 from \$21 at start to \$25 after one year, grade 3 from \$22 at start to \$28 after 2 years, grade 4 from \$24 at start to \$32 after 3 years and so on to grade 13 which range from \$46 at start to \$72 after 8 years' service.

Provision is made for *sick leave* and *leave of absence with pay*, *seniority rights* and *grievance procedure*.

Animal Foods

EDMONTON, ALTA.—GAINERS LIMITED AND UNITED PACKINGHOUSE WORKERS OF AMERICA, LOCAL 319.

Agreement to be in effect from September 1, 1948, to August 31, 1949, and thereafter from year to year subject to notice. Employees who are now or later become members of the union must, as a condition of employment, maintain such membership during the term of the agreement provided that such employees may resign from membership in the union within the 15 days immediately preceding the expiry date of the agreement without their employment being affected thereby. All employees covered by the agreement whether union members or not must contribute such sums to the union as may be assessed by the union on its members according to its constitution for general union purposes and shall not extend to special assessments or increments on assessments which relate to special union benefits in which the non-member employee as such would not participate, or the benefit of which he would not enjoy. It shall not include any entrance fee. New employees will not be subject to compulsory check-off until they have been in the employment of the company for 30 days, unless they become members of the union before that time. The company agrees to deduct from the pay of employees who so authorize the union entrance fee and union dues and to remit same to the union.

Hours of work for calculating overtime shall not exceed 44 for any payroll week and must not exceed: for a 5-day week—9 hours per day for 4 days and 8 hours for one day, Monday through Friday; or for a 6-day

week—8 hours per day Monday through Friday, and 4 hours on Saturday for single and double shifts; or such other schedule as may be agreed upon by the union and the company for continuous shifts and for special cases such as janitors, clean-up men, etc. The company and the union recognize that it may be necessary for employees to work in excess of their regular number of hours due to the nature of the business and for continuous shift operators, such as firemen and engineers to work 48 hours in a week. *Overtime* at time and one-half shall be paid hourly-rated employees for work in excess of 44 hours per week, or for work after 6 p.m. Monday through Friday and after 1 p.m. on Saturday for day shifts (after 5 p.m. on Saturday where triple shifts are scheduled). Double time shall be paid for work on Sundays (except where the work regularly falls on Sunday, in which case the employee receives double time if he works on his day off in lieu of Sunday), and for work on 8 specified holidays which are *paid holidays*. *Guaranteed weekly minimum pay*: if an employee's earnings, excluding only the night premium, do not amount to 37½ hours pay at his job rate, the company shall make up the difference subject to certain stipulated rules. *Rest periods* of 10 minutes each morning and afternoon will be granted provided the shift exceeds 2½ hours. *Vacations with pay* shall be granted employees of one week after one year's employment (275 work days), 2 weeks after 2 years' employment and 3 weeks after 15 years' employment.

Wage rates: the company agrees to pay the same wage increase as the "Big Three Packers", the said increase to be retroactive to the date on which it becomes effective in the "Big Three" plants. A *night premium* of 5 cents per hour shall be paid to all workers for time worked between the hours of 6 p.m. and 6 a.m. Any employee classified by the company as a gang leader shall be paid 5 cents per hour above the highest authorized rate of any employee on his gang.

Provision is made for *seniority rights* and *grievance procedure*.

Pulp, Paper and Paper Products

TORONTO, ONT.—HINDE AND DAUCH PAPER COMPANY OF CANADA, LTD. AND INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 169.

Agreement to be in effect from June 16, 1948, to June 16, 1949, and thereafter from year to year subject to 60 days' notice. The company recognizes the union as the sole and exclusive collective bargaining agent for all eligible employees. There shall be no discrimination, intimidation, restraint or coercion because of membership or non-membership in the union. All employees who are members of the union or who later become members shall continue to pay current dues to the union during the life of the agreement if they continue as employees of the company. The company will continue to deduct union dues weekly from the pay of union members during the term of the agreement and to remit same to the union.

Hours of work: for paper mills 8 per day, 6 days a week for both day and tour workers; for box factory—9 per day, 5 days a week for both day and night shifts. *Overtime*:

time and one-half for work on Sundays and for work in excess of regular hours during the week (except when a tour worker is working in place of his relief or where special arrangements are agreed to by employees directly affected, the union and the company). Time and one-half will be paid for work on any of 6 specified holidays, 3 of which shall be *paid holidays* for employees working their regular shifts immediately preceding and following the holiday. *Vacation with pay*: one week for employees with one or more years' service with the company; employees with less than 3 months' service receive one week without pay, while employees with 3 to 11 months' service receive one week with pay in proportion to their length of service ranging from 1½ to 5½ days' pay. *Rest periods*: all day shift employees will be allowed a 10-minute rest period each morning and afternoon; all night shift employees will be allowed two 10-minute rest periods a night.

Hourly wage rates for certain classes in mill: machine room—machine tenders \$1.40; back tenders \$1.23; third hands \$1.14; fourth hands \$1.02; fifth hands, broke hustlers, felt checkers, finishers' helpers, spare hands 96 cents, finishers \$1.02, size men \$1.01; beater room—beater furnishers, screens settling system 96 cents; receiving—crane men \$1.01; storage men 96 cents; yard men 94 cents; boiler room—shift engineers, second class \$1.23; stationary engineers, third and fourth class and firemen \$1.12; oilers and boiler room helpers, 96 cents; maintenance—pipe-fitters \$1.02 to \$1.13; millwrights \$1.02 to \$1.24; helpers 97 cents; machinists \$1.02; spray painters \$1.13; carpenters, brush painters \$1.08; blacksmiths, welders, electricians \$1.19. The starting rate for new employees will be 7 cents per hour less than that established as a standard, and shall be continued for a period of 4 weeks continuous employment. If satisfactory and retained, the employee shall be raised to the minimum standard rate for the classification under which he works. In the box factory, wage rates vary from 66 cents to \$1.07 plus piece rates. The starting rate for new employees will be 5 cents per hour less than that established as a standard and shall be continued for a period of 8 weeks' continuous employment. If employee is satisfactory and retained, he will automatically advance to the minimum standard rate for the classification under which he works. New employees, will not be excluded from higher earnings that are possible and general on jobs where the incentive plan is in force.

Provision is made for *seniority rights* and *grievance procedure*.

Metal Products

MONTREAL, P.Q., TORONTO AND LONDON, ONT.—GENERAL STEEL WARES LIMITED AND THE UNITED STEELWORKERS OF AMERICA, LOCALS 1111, 2771, 3368 AND 2847.

Agreement to be in effect from July 1, 1948, to June 30, 1949, and thereafter save that from June 30, 1949, to May 30, 1949, or in any subsequent year, either party may by notice to the other, terminate any provision, or propose an amendment of, or substitution for, or addition to any provision in the agreement.

Modified union shop: all employees presently members of the union or who later

become members shall remain members of the union during the life of the agreement. All permanent employees hired on or after November 1, 1939, shall become and remain members of the union as a condition of employment for the life of the agreement. *Check-off:* all employees hired prior to November 1, 1939, shall as a condition of continued employment, authorize the company to deduct 50 cents per week from their wages and transmit to the union in consideration of the union acting as the exclusive bargaining agent for the employees. The company agrees to deduct from the pay of any employee who so authorizes the sum of 50 cents per week as union dues and to remit same to the union.

Hours of work and overtime: time and one-half shall be paid for work in excess of the stipulated hours per day or per night and for work on 2 public holidays. Six of the 8 specified holidays will be *paid holidays* for permanent employees who work their regular shifts immediately preceding and following the holiday. *Rest periods* of 10 minutes shall be granted each morning and afternoon to all employees. *Vacation with pay:* one week to employees with one year's seniority, 2 weeks to employees with 5 years' seniority. Employees with less than one year's seniority receive a vacation with pay in proportion to their length of service.

Wage rates: the company agrees that established piece work rates will not be altered, except because of a change in the method of manufacture, the request of the employees, or by mutual consent. The occupational rate of the job on which they are employed shall be paid to temporary employees as soon as they reach a standard of proficiency that entitles them to that rate. The present 6 cents per hour cost-of-living bonus shall be incorporated in hourly rates. The adult male common labour rate shall be established at 90 cents per hour in all plants to be paid from date of employment. *Cost-of-living bonus:* whenever during the life of the agreement, the cost-of-living index last published is 3 full points or more above 154.3 then a cost-of-living bonus of 2 cents per hour for each 3 full points that the index is above 154.3 shall be put into effect with the first pay period commencing after the publication of the index. *Off shift differential:* all employees working on shifts other than the regular day shift shall be paid a bonus of 5 cents per hour above the regular rate.

Provision is made for *seniority rights* and *grievance procedure*.

TORONTO, ONT.—DE HAVILLAND AIRCRAFT OF CANADA, LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 112.

Agreement to be in effect from September 1, 1948, to August 31, 1949, and thereafter from year to year subject to notice. *Union security:* all employees covered by the agreement whether union members or not will have a stated amount of union dues deducted monthly by the company from their pay and remitted to the union. Such deduction does not include initiation fees nor assessments levied by the union. This will also apply to new employees following the completion of their probationary period. This provision will be null and void should there be any strike or other collective action which will stop or interfere with production.

Hours of work: 8 per day Monday through Friday, for all employees except power house engineers and plant fire protection employees whose hours shall be 8 per day but of 5 days Monday through Sunday. *Overtime:* time and one-half for work performed by an employee in excess of 8 hours in any regular work day or for any work on Saturdays, Sundays and 2 specified holidays. Six additional specified holidays will be *paid holidays* if they fall on a regular work day for employees who work their regularly scheduled shifts immediately preceding and following the holiday. *Rest and wash-up periods:* a rest period of 10 minutes in the first part of each shift will be maintained, also a wash-up or clean-up period of 5 minutes before the lunch period. *Vacation with pay:* all employees with 3 months or more of service with the company shall be entitled to a vacation with pay. Employees with less than 3 years' seniority shall receive one week with pay equivalent to 2 per cent of earnings during the previous year, employees with 3 to 5 years' seniority shall receive one week with pay equivalent to 3 per cent, employees with more than 5 years' service shall receive 2 weeks vacation with pay equivalent to 4 per cent of their earnings during the previous year.

Hourly wage rates for certain classes: minimum hiring rate for adult males 85 cents, for males under 18 years of age and females 70 cents. Employees taken on at the minimum hiring rate (labour 85 cents, production 90 cents) shall be given a 5-cent increase at the expiration of their 60-day probationary period. Lead hands shall be paid a bonus of 10 cents per hour while employed as such and charge hands shall receive 20 cents per hour bonus while acting in such capacity. The company shall continue to pay a 3-cents-per-hour bonus on all pay rates as a transportation allowance, such bonus to be included in the hourly rate for the purpose of overtime payment. Metal trades—tool and die workers \$1.05 to \$1.20; machinists, sheetmetal workers, detail bench fitters, pipe benders 90 cents to \$1.20; break press operators, acetylene welders 90 cents to \$1.15; heat treat and process operators, plaster pattern makers and moulders, cable splicers 90 cents to \$1.05; component assemblers 90 cents to \$1.10; riveters 70 to 85 cents; aircraft trades—airframe, engine, service, power plant, hydraulic and instrument mechanics and woodworkers 90 cents to \$1.20; radio mechanics 90 cents to \$1.15; electrical mechanics 90 cents to \$1.10; spray painters 90 cents to \$1.05; fabric workers 70 to 85 cents; maintenance staff—carpenters, millwrights, electricians, plumbers and steamfitters 90 cents to \$1.20; boiler engineers, classes 2 and 3, \$1.10 and \$1.20; painters 90 cents to \$1.05, truck, tractor or bulldozer operators 90 cents to \$1; labourers 85 and 90 cents. Sheet metal workers shall be entitled to an extra 5 cents per hour while engaged on beating or wheeling. Detail bench fitters shall be entitled to an extra 10 cents per hour while engaged on making tools. Woodworkers shall be entitled to an extra 5 cents per hour while employed on pattern making. A *night shift premium* of 5 cents per hour will be paid for all work on night shift if such shift is found necessary.

Provision is made for *seniority rights* and *grievance procedure*.

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement, the amendment of 15 other agreements and the correction of 2 of them. These include the amendment of the agreements for barbers and hairdressers at Joliette, for retail food stores and for the sash and door industry at Quebec and for both the fine glove and the work glove industries for the province in the *Quebec Official Gazette* of December 24, the amendment of the agreements for barbers and hairdressers in Missisquoi County, for hardware and paint stores at Quebec, for hospital and charitable institution employees at St. Hyacinthe, for the men's and boy's clothing industry for the province and for the uncorrugated paper box industry for the province and the correction of the agreement for building trades at Montreal in the issue of December 31, the amendment of the agreements for building trades at Hull and for municipal employees at Jonquière in the issue of January 8. Other Orders in Council are summarized below.

Requests for the amendment of the agreements for the furniture industry for the provinces and for clockmakers in the Eastern Townships were gazetted December 24. A request for the amendment of the agreement for barbers and hairdressers at St. Hyacinthe was published December 31. Requests for the amendment of the agreements for building trades and for the wholesale fur industry both at Montreal were published January 8. Requests for the amendment of the agreements for the shoe industry for the province, for building trades at Montreal, for hospital and chari-

table institution employees at St. Hyacinthe and for iron oxide miners at Red Mill were all gazetted January 15.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

BUILDING MATERIALS, PROVINCE OF QUEBEC

See below under "Manufacturing: Non-Metallic Minerals, Chemicals, Etc."

Manufacturing

Pulp, Paper and Paper Products

UNCORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated December 29, and gazetted January 8, amends the previous Orders in Council for this industry (L.G., Dec., 1947, p. 1802; Aug., 1948, p. 871). Other Orders in Council extending the term of this agreement were published in the *Quebec Official Gazette* of July 10, and October 9, 1948. Agreement to remain in effect until October 1, 1948, and thereafter from year to year, subject to notice.

The following are stricken off the list of co-contracting parties because the territory in which they operate is now governed by the agreement for the uncorrugated paper box industry for the Quebec district (L.G., Nov., 1948, p. 1245): "L'Association patronale du Commerce de Québec inc."; Page Sangster Printing Co. Ltd.; "Le Syndicat catholique des Employés des Industries de la Boîte et des Sacs en Papier de Québec inc."; "La Fraternité des Employés de Premier Paper Box Ltd." The following is accepted as contracting party: "L'Union des Travailleurs du Papier et du Carton Façonnés."

Territorial jurisdiction comprises the entire Province of Quebec with the exception of the judicial districts of Kamouraska, Montmagny, Beauce, Arthabaska, St. François, Nicolet, Quebec, Three Rivers, Roberval, Chicoutimi and Saguenay, and is divided into 2 zones, as follows: zone I, the Island of Montreal and within a radius of 50 miles; zone II, the remainder of the territorial jurisdiction, including the municipality of Epiphanie and the judicial district of Bedford.

Hours in zone I are reduced from 47½ to 45 per week; however, maintenance and repair men, stokers, stationary enginemen and watchmen work 56 hours per week, and shippers, truck drivers and their helpers work a 50-hour week.

Overtime is payable at time and one-half. Work performed on specified holidays is payable at double time to all employees, except watchmen, firemen (stokers), stationary enginemen and repair men for machines and buildings. Night shift employees are to be paid 20 per cent higher than the day rate and overtime is computed on the 20 per cent higher rate.

* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or association of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Minimum wage rates in zone I: female employees—forelady 57 cents per hour; hand worker (first class) 53 cents; hand worker (second class), covering machine operator, staying machine operator, stitcher operator, Stoke & Smith machine operator, top-piece machine operator, tier 47 cents; operator on any other machines not classified above, hand-fed machine table gummer, automatic glueing machine feeder, Brightwood machine feeder, four-corner machine feeder, division assembler, stripper, packer, folder 45 cents; apprentices 20 per cent and 10 per cent less than minimum rate. **Male employees**—foreman \$1.01 per hour; assistant foreman 90 cents; machinist (foreman) \$1; die maker 92 cents; automatic glueing machine operator 85 cents; scorer, machinist 82 cents; cylinder box press operator 80 cents; Brightwood machine operator, cutter on knife (first class), four-corner stayer operator, stationary engineman 78 cents; shipper 77 cents; colt press operator 75 cents; end-piece operator (single or double) 71 cents; maintenance and repair man 70 cents, truck driver 69 cents; cutter on knife (second class) 68 cents; circular saw operator, slitter operator, assistant die maker 66 cents; punch operator, feeder (Brightwood machine), feeder (Colt press), feeder (Cylinder box press), feeder (four-corner machine) 65 cents; bale press operator, stripper 64 cents; boiler fireman 63 cents; chief enginemen \$42.95 and \$36.95 per week; apprentices 20 per cent and 10 per cent less than minimum rate.

Vacation: every employee with at least 6 months' service for the same employer shall be entitled to a continued paid vacation of one half-day for each month of service up to one complete working week.

Wages, working and apprenticeship conditions of employees of the printing trades working in establishments in zone I governed by this agreement are those determined in the agreement relating to printing trades in Montreal (L.G., Sept., 1946, p. 1250, Dec., p. 1772; March, 1947, p. 369, April, p. 543, Dec., p. 1803; May, 1948, p. 486), with the exception of the duration of work which shall consist of 45 hours per week. Wages, working and apprenticeship conditions of employees of zone II working in establishments governed by this agreement shall be those determined in the agreement relating to the uncorrugated paper box industry in the Quebec district (L.G., Nov., 1948, p. 1245).

Printing and Publishing

LITHOGRAPHERS, PROVINCE OF QUEBEC

An Order in Council, dated December 23, and gazetted December 31, extends the term of the previous Order in Council for this industry (L.G., June, 1948, p. 619) for one year from December 31, 1948.

Non-Metallic Minerals, Chemicals, Etc.

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated December 16, gazetted December 24, and corrected January 8, amends the previous Orders in Council for this industry (L.G., Nov., 1947, p. 1660; Nov., 1948, p. 1246, and previous issues) by the addition of 5 employers and one employees' association as co-contracting parties and by the deletion of the name of

one firm from the list of contracting parties of the first part. This Order in Council also amends part III of the agreement which applies to the marble industry.

Marble Industry

This part of the agreement covers all operations carried out in the quarries and shops of the marble industry.

Territorial jurisdiction comprises the entire Province of Quebec and is divided into 2 zones as follows: zone I, the Island of Montreal and within a radius of 15 miles from its limits; zone II, the remainder of the Province.

Hours: for marble cutters and apprentice marble cutters—8 per day, 4 on Saturday, a 44-hour week in both zones; for the other trades—10 per day, 5 on Saturday, a 55-hour week in both zones. For watchmen there is no daily limitation of the duration of work in both zones, but in zone I the weekly maximum is 60 hours.

Overtime in zone I: time and one-half until midnight, double time between midnight and 7 a.m. However, night shift employees are paid at the regular rate for the first 5 hours, time and one-half for the following 2 hours, double time thereafter. In zone II, overtime is payable at time and one-half; night shift employees are paid at the regular rate for the first 8 hours, time and one-half for the following 4 hours. Work performed on Sundays or any of 11 specified holidays is payable at double time in both zones.

Minimum wage rates in zone I: hand cutter \$1.20 per hour; carborundum machine operator, terrazzo caster \$1.15; machine cutter, hand and machine polisher, compressor, saw setter, bed rubber face, bed rubber end, craneman \$1; sawyersmen on gang saws—first 3 months 85 cents, thereafter \$1; helper and labourer 80 cents; apprentice marble cutter and setter from 80 cents per hour during first year to \$1.10 in fourth year; apprentice carborundum machine operator from 85 cents per hour in first 6 months to \$1 in third 6 months; apprentice polisher—first 3 months, 85 cents, thereafter \$1; watchman \$30 per week.

Minimum wage rates in zone II: hand cutter \$1.10 per hour; carborundum machine operator, compressor 85 cents; hand and machine polisher, bed rubber face, bed rubber end, craneman 80 cents; saw setter 75 cents; sawyersmen on gang saws—first 3 months 60 cents, thereafter 80 cents; quarrymen—drill runners, channel runners 70 cents, helpers 60 cents; labourer (crusher plant) helper and labourer 65 cents; watchman \$30 per week; apprentice marble cutter and setter from 70 cents per hour in first year to \$1 in fourth year; apprentice carborundum machine operator from 70 cents in first 6 months to 80 cents in third 6 months; apprentice polisher—first 3 months 70 cents, thereafter 80 cents.

Vacation: one week with pay in both zones after one year's service for the same employer.

Construction

BUILDING TRADES, MONTREAL

An Order in Council, dated December 23, and gazetted December 31, amends the previous Orders in Council for this industry

(L.G., Sept., 1948, p. 993, Nov., p. 1247; Jan., 1949, p. 67, Feb., p. 178) by providing that the trade of concrete reinforcing steel erector requires one year of apprenticeship and that apprentices in this trade shall not begin their apprenticeship before the sixteenth or after the twenty-fifth year of age. The minimum wage rate for apprentices in this trade shall be 80 cents per hour for the first 6 months and 90 cents in the second 6 months.

Trade

WHOLESALE AND RETAIL STORES, RIMOUSKI

An Order in Council, dated December 16, and gazetted December 24, makes obligatory the terms of a new agreement between "L'Association des Marchands détaillants du Canada inc.", Rimouski branch, and "Le Syndicat catholique des Employés du Commerce de Rimouski inc." Agreement to be in effect from December 24, 1948, to October 31, 1949, and thereafter from year to year, subject to notice.

Territorial jurisdiction comprises the town of Rimouski and within a radius of 3 miles from its limits.

Industrial Standards Acts, Etc.

Schedule of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, Ontario, Saskatchewan and Alberta

Recent proceedings under the Industrial Standards Acts, etc.* include: in Ontario, new schedules for the retail gasoline service industry at Toronto, at Brantford, at Hamilton and at Windsor, and for barbers at Owen Sound, and in the Beamsville zone, Clinton-Louth Townships zone and Grimsby zone, all published in *The Ontario Gazette* of November 20, and a new schedule for barbers in the Burlington

*In six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the *LABOUR GAZETTE*, December, 1948, page 1422.

Hours: 54 per week in the retail trade, in the food products and all the other retail or wholesale and retail trades; 50 per week in the wholesale trade.

Overtime is remunerated at time and one-half, with double time on Sundays and 12 specified paid holidays.

Minimum wage rates: accountant \$40 per week; section head-clerk, butcher-clerk \$35; store clerk and office employee—(male) from \$17 per week during first 6 months to \$30 during third year; (female) from \$14 to \$20 per week; deliveryman—(truck) \$27; (horse-drawn vehicle) \$18; deliveryman's helper \$18 and \$23; assistant butcher-clerk from \$17 per week during first 6 months to \$30 in third year; common worker—(under 19 years of age) \$18; (19 and over) \$27; messenger—\$9 per week when bicycle supplied by employer and \$11 when bicycle supplied by employee; occasional and extra employees—(males) 50 cents per hour; (females) 35 cents per hour.

Vacation: one week with pay after one year's service, 2 weeks with pay after 5 years' service.

zone, published December 4; in Saskatchewan, the amendment of the schedules for the beauty culture industry at Regina and the barbering industry for the province, published in *The Saskatchewan Gazette* of December 18, and a new schedule for the beauty culture industry at Estevan, in the issue of December 24. Other Orders in Council are summarized below.

NOVA SCOTIA

Construction

BRICKLAYERS, SYDNEY

An Order in Council gazetted November 24, and December 1, makes binding the terms of a new schedule for bricklayers at Sydney, exclusive of the Dominion Steel and Coal Corporation and its employees, to be in effect until May 1, 1949.

Hours: 8 per day, Monday to Friday, 4 on Saturday, a 44-hour week.

Overtime is payable at time and one-half, with double time on Saturday afternoons, Sundays and 6 specified holidays.

Minimum wage rates: \$1.50 per hour for journeymen bricklayers, apprentices from 75 cents per hour during first 1,000 hours to \$1.50 in eighth 1,000 hours.

ONTARIO

Construction

PLASTERERS, OTTAWA

An Order in Council, dated December 16, and gazetted January 1, makes binding the terms of a new schedule for plasterers at Ottawa, to be in effect from January 11, 1949, during pleasure.

This schedule is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, Nov., 1947, p. 1663, with the following exception:—

Minimum wage rate is increased from \$1.28 to \$1.50 per hour

PAINTERS, CORNWALL

An Order in Council, dated December 9, and gazetted December 25, makes binding the terms of a new schedule for painters at Cornwall to be in effect from January 4, 1949, during pleasure.

Hours: 8 per day, Monday through Friday, 4 on Saturday, a 44-hour week.

Overtime is payable at time and one-half for the first 4 hours, double time thereafter and on Saturday afternoon, Sunday and 7 specified holidays.

Minimum wage rates: \$1.05 per hour for spray-painting, 95 cents for all other work. Night shift employees are paid an additional 10 cents per hour.

The advisory committee may fix a special lower minimum rate for handicapped workers.

SASKATCHEWAN

Manufacturing

Vegetable Foods

BAKERS AND BAKERY SALESMEN, MOOSE JAW

An Order in Council, dated December 14, and gazetted December 18, makes binding the terms of a new schedule for bakers and bakery salesmen at Moose Jaw and within a radius of 5 miles, to be in effect during pleasure. This schedule is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1948, p. 622, with the following exceptions:—

Minimum weekly wage rates: doughman and cake mixer, ovenman, maintenanceman \$37; bench hands and machine men \$34.50; shipper \$35; stockkeeper, bread wrapper \$32; finishers and cake wrappers from \$20 per week in first 6 months to \$25 after 18 months; janitor \$28.75; truck driver, handyman, barnman \$31.50; stenographer \$25.75; apprentices from \$23 per week in first year to \$28.75 in third year; female employees performing the duties of male employees shall receive not less than 90 per cent of that paid classification.

Construction

CARPENTERS, YORKTON

An Order in Council, dated December 14, and gazetted December 18, makes binding the terms of a new schedule for carpenters at Yorkton and within a radius of 5 miles, to be in effect during pleasure.

Hours: 8 per day, Monday through Friday, 4 on Saturday, a 44-hour week.

Overtime is payable at time and one-half for the first 4 hours, double time thereafter. Every employee who works on any of the 8 specified paid holidays shall be paid, in addition to one day's wages at his regular rate of wages, one and one-half times his regular rate of wages for every hour or part of an hour during which he works on such holiday.

Minimum wage rate: \$1.15 per hour. A carpenter in charge of 4 or more carpenters shall receive an additional 15 cents per hour. Night shift employees receive 8 hours' pay for 7 hours' work. An employee required to report for duty shall be paid for a minimum of 4 hours, unless the work cannot be performed due to bad weather.

ALBERTA

Manufacturing

Electrical Products and Repair

RADIO SERVICE INDUSTRY, CALGARY

An Order in Council, dated December 6, and gazetted December 15, makes binding the terms of a new schedule for the radio service industry at Calgary, to be in effect from December 25, 1948, to December 24, 1949, or thereafter during pleasure.

Hours: 8 per day, 44 per week.

Overtime: all work in excess of 9 hours per day and of 44 hours per week and on statutory holidays is payable at time and one-half, double time on Sundays. Shift work employees may be given another day off with pay within 7 days in lieu of the statutory holiday, or the weekly day of rest.

Minimum weekly wage rates: first class technician \$50, second class technician \$40, provisional technician \$30, foreman or service manager shall receive at least 10 per cent more than a first class technician.

Vacation: 2 weeks with pay after one year's service; 2 days with pay for every month of continuous service in excess of 6 months for those with less than one year's service.

Apprentices are governed by the terms of The Apprenticeship Act.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During December

(1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of December the Department of Labour prepared 86 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 78 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

| Department | No. of contracts | Aggregate amount |
|--|------------------|------------------|
| Canadian Commercial Corporation. | 4,886 | \$8,737,146.00 |
| Post Office. | 13 | 149,192.65 |
| R.C.M.P. | 1 | 4,514.40 |

CONTRACTS CONTAINING FAIR WAGES SCHEDULES AWARDED DURING DECEMBER

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

LABOUR LAW

Recent Regulations Under Dominion and Provincial Legislation

Under Dominion laws, regulations have been made, with retrospective effect to April 1, 1947, providing for the payment of compensation for disability resulting from pulmonary tuberculosis contracted in federal Government hospitals in all provinces other than British Columbia. In British Columbia such provision had already been made. ¶An Order under the Department of Veterans Affairs Act provides for vocational training courses for merchant seamen. ¶The Alberta Workmen's Compensation Board has issued a new consolidation of regulations under the revised Act of 1948. All safety regulations made by the Board are retained without change. ¶A revised minimum wage order in British Columbia fixes higher rates for elevator operators and starters.

DOMINION

Canada Shipping Act

New regulations relating to the examination of Masters and Mates of home-trade, inland and minor waters vessels were made on December 10, 1948, gazetted January 12, 1949 (P.C. 5663). These replace earlier regulations made on April 8 and gazetted June 9, 1948 (L.G., September, 1948, p. 1007).

Department of Veterans Affairs Act

By the Merchant Seamen Vocational Training Order (P.C. 5983), gazetted January 26, and effective from January 1, 1949, vocational training courses with appropriate allowances and fees as provided for veterans under the Veterans Rehabilitation Act, 1945, are to be extended to merchant seamen.

To be eligible for such training, a seaman must: (1) be under thirty years of age, and resident and domiciled in Canada; (2) have received or be eligible to receive a bonus under the Merchant Seamen Special Bonus Order, 1945, or under the Merchant Seamen War Service Bonus Order, 1944; and (3) submit his application to the Department of Veterans Affairs within six months after January 1, 1949. He will not be eligible for training under the Order unless he has ceased to be employed at sea or provides acceptable reasons as to why he desires to leave such employment. He may not be paid an allowance if he has previously received a grant for courses provided by the Merchant Seamen Special

Bonus Order (L.G., 1945, p. 913). All decisions as to eligibility and periods of entitlement of applicants rest with the Minister of Transport.

Provisions of the Veterans Rehabilitation Act authorizing the Minister of Veterans Affairs, in determining the amount of any allowance, to take into consideration any prospective income of the veteran and his dependants for the period for which the allowance is to be paid, exempting such allowances from income tax, and providing for the payment of compensation for injury by accident while in training are also to apply to merchant seamen governed by this Order.

While receiving training, a seaman is to be given such medical treatment and is to be paid such allowances or monetary benefits as are provided by Order in Council for former members of the forces.

Training is to be given only in Canada, and no allowances are to be made for training undertaken before January 1, 1949.

The Minister of Veterans Affairs who administers the Order may, with the approval of the Minister of Transport, make such rules as he may consider necessary for the carrying out of its provisions.

Government Employees Compensation Act

Pulmonary Tuberculosis

Included in the Government Employees Compensation Act, 1947, was the provision made by Order in Council during the war for compensation to a federal Government

employee or his dependants for disability or death caused by pulmonary tuberculosis contracted as a result of employment in a Government-operated hospital or sanatorium for the treatment of tuberculosis, or while employed as a nurse in the field and exposed to this disease, when such disease is not compensated under the law of the Province in which the disease was contracted (L.G., 1947, p. 1327). Only in the Province of British Columbia is pulmonary tuberculosis contracted in hospitals an industrial disease within the meaning of the Act, as it was covered by the B.C. Act in 1943 (L.G., 1945, p. 1530). It was necessary, therefore, to make arrangements for the administration of the provision in all Provinces other than British Columbia. Under section eight of the Act, regulations have been issued, approved by Order in Council P.C. 5572, to prescribe the conditions under which compensation is payable, the amount payable and the manner in which compensation is to be determined. Made on December 10, 1948, gazetted January 12, 1949, they are retrospective to April 1, 1947.

To be eligible for compensation, an employee who contracts the disease after April 1, 1947, must have been certified free from the disease at the time he commenced employment, or, if he had no medical examination, must have been free from evidence of tuberculosis before being engaged.

As provided in the Government Employees Compensation Act, compensation is payable at the rate provided for persons employed by private employers under the Act of the province in which the disease was contracted. In Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and Alberta, right to compensation and the amount payable are to be determined by the provincial Workmen's Compensation Board. In Prince Edward Island which has no Workmen's Compensation Act, they will be decided by the authority appointed by the Governor in Council to determine compensation. In the Yukon and Northwest Territories, the authority will be the Minister of Transport.

The regulations, like the Act, provide that where a person ordinarily resident in a province other than the Yukon Territory contracts the disease while employed in the Yukon or Northwest Territories, the disease is deemed to have been contracted in the province of which he is a resident. Similarly, where an employee, other than one employed locally outside of Canada, contracts the disease due to his employment outside of Canada, compensation is payable

according to the terms of the law of the province, or of the Northwest Territories, in which he was ordinarily resident before entering such employment.

Every employee governed by these regulations must have a general medical examination with chest X-ray before being employed and every six months thereafter. All workers employed on December 1, 1948, who have not had a medical examination and X-ray must be examined within two months of that date. A complete medical history with X-ray films of every employee is to be kept and made available in dealing with compensation claims.

PROVINCIAL

Alberta Workmen's Compensation Act

A new set of regulations under the 1948 Act has been issued by the Alberta Workmen's Compensation Board, repealing all previous regulations except the existing safety regulations. Gazetted December 31, 1948, they become effective on January 31, 1949.

Like the previous consolidation (L.G., 1938, p. 1234), these regulations cover assessments and super-assessments; medical fees and hospital reports; exemptions; specific definitions of certain businesses for the purposes of the Act; obligation on employers to keep records and on purchasers of lumber to keep accounts of lumber purchased; and earnings for purposes of assessment of operators of certain equipment.

By virtue of the 1948 amendment in the Act increasing from \$2,000 to \$2,500 the maximum amount of earnings which may be reckoned in determining compensation, it is now stipulated that no assessment may be made on a worker's earnings in excess of \$2,500 a year.

The list of trades, businesses and employments wholly excluded from the Act is unchanged except for the addition of digging or drilling of water wells and cutting or manufacturing of fenceposts, poles and pulpwood, and the omission of the sale of new and used cars. Wholly exempted are: architects, auctioneers, automobile schools, barber shops, beauty parlours, boarding houses, commercial travellers representing industries outside Alberta, commission agents, commission salesmen, dairy farms, dentists and dental works and establishments, freight and passenger elevators of the "automatic-self-operating" type, feed-chopping mills, fire insurance companies, cutting or manufacture of firewood, fenceposts, cordwood, mine props, poles, piles and

pulpwood, fishing, janitors, the lightning rod business, mail contractors, taxi business, production or distribution of moving pictures, pedlars, photographers, shoe shine parlours, stock yards, surgical and medical establishments, undertakers and undertaking establishments, veterinary surgeons and the drilling and digging of water wells. However, if any of these employments is carried on as part of an industry under the Act, or if the Board has approved its application to come within the Act, it may be admitted.

Restaurants and retail stores in the town-site of Banff and Jasper are now included in the restaurants and retail stores under the Act. Provision is made for the "packaging" as well as processing and bottling of milk and cream in defining "creameries."

Another regulation deals with assessments in respect of operators of certain equipment supplied to the employer (or principal) where the employee who supplies the equipment either operates it himself or hires others to operate it and is paid for the services of both equipment and operator. "Equipment" under this regulation includes teams, trucks, tractors, bulldozers, graders, drag lines, power shovels and other equipment that may be designated by the Board. All persons engaged in the operation of such equipment are to be regarded as workmen of the principal. For the purposes of assessment, the earnings of teamsters are to be \$4 per shift and of operators of all other equipment \$6 per shift. The principal is liable for the assessment in respect of such operators and he may charge it back to the person supplying the equipment except when that person operates the equipment himself.

British Columbia Hours of Work Act

Overtime regulations governing the preparatory or complementary work done by engineers or operators, firemen, oilers or greasers working on a shingle shift in industrial undertakings using steam, gasoline or diesel engines or electric energy have now been extended to apply to exceptional cases covered by the Act wherein some variation from the eight- and 44-hour limits provided is permitted.

Formerly, under regulation 4A (L.G., 1948, p. 745), now repealed, one hour of overtime per day could be worked only in addition to the regular maximum eight-hour day. Henceforth, the hour of overtime will be permitted also in cases where, by custom

or agreement between organizations or representatives of employers and workers: (1) longer hours are worked on one or more days to permit shorter hours on one day, if the daily limit does not exceed nine or the weekly limit 44 hours; or (2) where a variance of hours (daily, weekly or both) over a period of time is allowed if an agreement between employees and employer is confirmed by the Board. In such case, average hours over the period must not exceed 44 per week.

The new regulation (4B), made on January 11, gazetted January 13, is effective from the latter date.

British Columbia Male and Female Minimum Wage Acts

Elevator Operators

Another minimum wage order has been revised by the B.C. Board of Industrial Relations. Minimum rates have been raised by a new Order (No. 53), issued on January 10, gazetted January 20, including in its coverage both male and female elevator operators and starters. This replaces two former Orders (Nos. 53 and 54) for female and male workers, respectively (L.G., 1938, p. 405), which laid down uniform conditions for these workers.

The new rate, effective from January 31, is \$18 for full-time workers who work 37½ or more hours a week, and 50 cents an hour for part-time workers working less than 37½ hours. Time and one-half the regular rate of pay must be paid for all work done after eight or 44 hours for which a permit must be obtained from the Board. Rates under the repealed Orders were \$14 for full-time and 37½ cents an hour for part-time, and, after the General Interim Minimum Wage Order, 1946, increased rates by 20 per cent, \$16.80 a week and 45 cents an hour.

An employee called to work but for whom there is no work must be paid at least two hours' pay at his regular rate or for the entire period of waiting if required to remain longer. If he commences work, he must receive at least four hours' pay. Previously, the worker had to be paid at least \$1.80 for a work-day of four hours or less.

A weekly rest of 32 consecutive hours, formerly 24, must be granted, but where this is unsuitable the employer may make a different arrangement if a joint application in writing is approved by the Board. As formerly, the employer may be required by the Board to provide a seat for any elevator operator or starter and to permit the worker to use it when on duty.

The deductions from the minimum wage for board and lodging remain unchanged at 20 cents per meal or \$4 for a full week's board of 21 meals and \$2 a week for lodging.

Since Order No. 3 (1946) (L.G., 1946, p. 989) provides that where a worker is required by his employer to wear a uniform or other special apparel the cost and upkeep of such uniform or apparel must be a charge on the employer, the provisions in the two earlier Orders regarding uniforms have been omitted.

As before, the employer must pay at least semi-monthly wages earned up to not more than eight days before pay-day, post a copy of the Order in a conspicuous place in his establishment, keep records in English relating to wages, hours, etc., and have records available for inspection at any time by the Board.

Saskatchewan Boiler and Pressure Vessel Act

New schedules have been issued raising the fees payable for the inspection of refrigerating systems, boilers and pressure vessels, by three Orders in Council (O.C. 71/49, 72/49, 73/49), issued on January 11 and gazetted January 22.

As regards the inspection of high pressure boilers, the higher scale of fees prescribed ranges from \$7.50 where the capacity does not exceed 25 h.p. to \$35 for any boiler exceeding 450 h.p. Formerly, for inspecting

any boiler over 250 h.p. the fee was \$20. The proviso is added that the fee payable for an external inspection or one under operating conditions must be either one-half of the prescribed fee or \$5, whichever is greater.

An inspector who has to make a special trip to make an inspection may, in the discretion of the chief inspector, charge a per diem fee of \$10, in addition to the regular fee.

Saskatchewan Hospitalization Act

Effective January 1, 1949, a revised schedule of hospital services for which payment may be made under the Act, in substitution for the schedule approved on March 29, 1947, has been issued by Order of the Minister of Public Health.

Changes were made in the regulations under the Act on December 27 and January 7, approved by Orders in Council 2150/48, 27/49 and 28/49, and gazetted on January 8 and 15. These revise the list of hospitals outside the Province eligible to receive payment for services rendered to beneficiaries in order to provide for treatment when accommodation in certain approved hospitals, nursing or maternity homes is not available, and to modify slightly the exceptions provided with respect to hospitals to which payment will not be made.

Persons incarcerated in provincial jails have been removed from the classes exempt from benefits under the Act during 1949.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that the claimant had, without good cause, refused to apply for suitable employment within the meaning of the Act.—CU-B. 343 (April 5, 1948.)

MATERIAL FACTS OF CASE:

The claimant, a married woman, aged 45 years, registered for work as a charwoman, was last employed as such in a bakery from July 15, 1946 to July 8, 1947, at a wage of 50 cents an hour, her working week consisting of 36 hours.

On November 25, 1947, she made claim for benefit, stating that she had voluntarily left her employment due to illness. On the same day the local office notified the claimant of permanent employment as a charwoman in a beauty salon at a wage of 50 cents an hour, which is the prevailing rate of pay. It entailed working Wednesday afternoon and Saturday morning, ten hours a week. She was also notified of permanent employment as a day worker in private

homes, going to the same home every Tuesday or Thursday, etc., filling in the rest of the week in that way.

The claimant refused to apply for these positions and the Insurance Officer disqualified her under Section 40 (1) (a) of the Act on the grounds that she had without good cause refused to apply for a situation in suitable employment.

From this decision the claimant appealed to a Court of Referees, stating that she preferred work similar to her previous employment, where she worked the full week for the one employer.

The Court of Referees unanimously reversed the decision of the Insurance Officer on the ground that the claimant did not have any time to find the employment she wanted as these positions were notified to her on the very day she registered for work.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees.

DECISION:

The question to decide is whether the claimant has without good cause refused to apply for suitable employment within the meaning of the Act.

The claimant had been out of the labour field for approximately four months when she registered for employment as charwoman and filed a claim for benefit indicating that she was then available for work.

The employment notified to her, on the day she applied for benefit, was in her usual occupation and at the prevailing rate of pay in the district. It entailed working, however, for several employers and the claimant did not like this pattern of employment.

It is not unusual for charwomen to work for more than one employer and the employment notified to the claimant which involved such conditions cannot, on that account only, be regarded as unsuitable.

On the facts before me, I do not consider that the claimant has offered any serious reasons for refusing to accept the work notified to her on the day she applied for benefit. She has therefore, without good cause, refused to apply for suitable employment within the meaning of the Act.

The decision of the Court of Referees is reversed and the appeal of the Insurance Officer is allowed.

The claimant is disqualified from receipt of benefit for a period of six weeks as from the date this decision is communicated to her.

Held that the employment notified to the claimant was not, in her case, suitable employment within the meaning of the Act.—CU-B. 357 (April 29, 1948.)

MATERIAL FACTS OF CASE:

The claimant, a single girl, aged 28 years, registered for work as a typist, was last employed by a wax manufacturer as an accountant and office clerk, at a salary of \$25 a week, from August 18, 1947 to October 31, 1947, on which date her employer moved to another city. On November 18, 1947, she made claim for benefit, which was allowed.

On November 21, 1947, the local office notified the claimant of permanent employment with a radio broadcasting station as a stenographer-typist, at a salary of \$15 a week, which was the prevailing rate in the district. The working week consisted of 35½ hours. She refused to accept this employment because she did not consider the salary sufficient for a person with her bilingual qualifications.

The Insurance Officer disqualified the claimant for a period of six weeks, as from November 22, 1947, under Section 40 (1) (a) of the Act, on the ground that she had without good cause failed to accept a situation in suitable employment when offered to her.

From this decision the claimant appealed to a Court of Referees, stating that the employer required a beginner. This statement was confirmed by the employer in a letter addressed to the local office. The Court of Referees, before which the claimant appeared, by a majority decision, upheld the decision of the Insurance Officer.

The claimant appealed to the Umpire from the decision of the Court of Referees.

DECISION:

The question to decide is whether the employment notified to the claimant was suitable employment within the meaning of the Act.

The evidence indicates that the claimant is a well qualified bilingual stenographer, with experience in accounting and general office work. According to her employment record, she worked two years with..... at a salary of \$110 a month, one year with..... at \$22 a week and two and a half months with (her last employer) at \$25 a week.

Under the circumstances, I find that the employment notified to the claimant was not suitable employment within the meaning of the Act.

The decision of the Court of Referees is therefore reversed and the appeal of the claimant is allowed.

Unemployment Insurance Statistics December 1948*

The monthly report issued by the Dominion Bureau of Statistics states that a total of 114,506 claims for Unemployment Insurance benefit was filed at local offices of the Unemployment Insurance Commission during December, 1948. This represents a considerable increase over November when 73,119 claims were filed, all provinces having contributed to the increase, and was also considerably above the 79,849 registered during December, 1947. Revised claims are these arising out of reconsideration, for any reason, of an existing claim. Thus, initial and renewal claims, representing mainly new cases of recorded unemployment among insured persons, numbered 105,939 in December compared with 66,426 in November and 73,578 in December, 1947.

Ordinary claims on the live unemployment register at December 31 totalled 144,058 (118,678 male and 25,380 female) as against 83,710 (62,806 male and 20,904 female) at November 30 and 94,525 (74,988 male and 19,537 female) on December 31, 1947. These represent the number of cases of recorded unemployment among insured persons on a given date, since ordinary claimants are those who have separated from their former employments. In addition, there were 6,866 (5,849 male and 1,017 female) "other claimants" on the register at December 31, compared with 4,143 (3,264 male and 879 female) on November 30, and 7,434 (6,725 male and 709 female) on December 31, 1947. "Other claimants" are largely short-time claimants, that is, those who have been put on short-time at their places of employment.

Those signing the live unemployment register as at December 31, 1948, are further classified, in Table E-6, according to the number of days they have been continuously on the register since the last initial or renewal claim was filed. To obtain the number of days in each case Sundays are

not included, odd days of casual employment are neither included nor considered as interrupting a period on the register and an initial claim that immediately follows the termination of a benefit year is ignored.

During December, 1948, 101,016 claims were disposed of, including 953 referred to Courts of Referees for further consideration and 605 special requests not granted (that is, requests for ante-dating, extension of the two-year period and dependency rate of benefit). Of the remaining 99,458, in which the chief consideration was entitlement to benefit, 80,266 were considered entitled to benefit and 19,192 not entitled to benefit.

Chief reasons given by insurance officers for considering claimants not entitled to benefit were: "insufficient contributions while in insurable employment" 10,152 cases, "voluntarily left employment without just cause" 4,261 cases, "refused an offer of work and neglected an opportunity to work" 894 cases, "discharged for misconduct" 708 cases.

A total of 99,802 persons received one or more benefit payments in December, 1948, aggregating \$3,592,155 for 1,687,804 unemployed compensated days, compared with 64,960 persons who were paid \$2,283,383 for 1,106,864 compensated days in November and 69,097 persons paid \$2,544,796 for 1,315,282 compensated days during December, 1947. Thus, the average duration of the unemployment compensated was 16.9 days in December, 17.0 days in November and 19.0 days in December, 1947. The average amount of benefit paid per beneficiary was \$35.99 in December, \$35.15 in November and \$36.83 in December, 1947. The average amount of benefit paid per compensated day of unemployment was \$2.13 in December, \$2.06 in November and \$1.93 in December, 1947.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending December 31, 1948, showed 3,550,432 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1948, an increase of 54,395 since November 30, 1948.

As at December 31, 1948, 211,293 employers were registered representing an increase of 239 since November 30, 1948.

* See Tables E-1 to E-7.

Problems of Employment

Reviewed by National Committee

The fortieth meeting of the National Employment Committee was held in the Board Room of the Unemployment Insurance Commission, Ottawa, January 20 and 21, 1949.

The National Employment Committee is an advisory body established to assist the Unemployment Insurance Commission in finding solutions for administrative, functional or other specific matters that may arise in connection with the placement of workers.

In close liaison with the National Committee are five Regional Committees that work in more direct association with the five Regional offices of the NES, located respectively, in Moncton, Montreal, Toronto, Winnipeg and Vancouver. These Regional Committees in turn co-operate with Local Employment Committees, set up in many of the more important industrial centres, and these act in a consultative capacity with local employment office managers.

Included in the membership of the National Committee are representatives of The Trades and Labour Congress of Canada, the Canadian Congress of Labour, the Canadian Manufacturers' Association, the Canadian Welfare Council, the National Council of Women, the Federal Council of Agriculture and the Canadian Legion of the British Empire Service League. The Chairman is Judge W. J. Lindal of Winnipeg and the Secretary, E. Norman Mitchell, of Ottawa.

The following members and proxies attended the meeting:—

Members: Judge W. J. Lindal (Chairman); A. L. Lott (CMA); A. R. Mosher (CCL); Mrs. G. D. Finlayson (NCW).

Proxies: Willis George (CMA); A. E. Hemming (TLC); Erskine Johnston (CFA); E. Kines (BESL).

Others present included: Unemployment Insurance Commissioners J. G. Bisson, R. J. Tallon and C. A. L. Murchison; W. K. Rutherford, Director of Employment, UIC; R. G. Barclay, Director of Unemployment Insurance, UIC; H. S. Relph, Chief Claims Officer, UIC; H. R. Hare, Employment Adviser, UIC; D. Morton, Welfare Officer, UIC; P. J. Philpott, Special Assistant to Deputy Minister, Department of Veterans Affairs.

Secretary's Report

The Secretary, E. Norman Mitchell, reviewed briefly the work of several of the Local Employment Committees that had been visited by him during November and December, 1948. It was indicated that these were alive to their responsibilities and gave promise of increasing activity during the present year.

He stated that "at the present time, there are 75 Local Employment Committees functioning and five others are in the process of being established throughout the Dominion." Several of the Local Committees were giving close attention to problems connected with apprenticeship and youth centres. Reports on their findings would be presented at the spring meeting of the National Committee, Mr. Mitchell stated.

"Refusal to Accept Employment"

A brief presented by Mr. A. R. Mosher, representing the Canadian Congress of Labour, questioned the interpretation that, he claimed, had been placed on section 43 (a) and (b) of the Unemployment Insurance Act. This section states that . . . "no insured person shall be disqualified from receipt of benefit by reason only of his refusal to accept employment, if by acceptance thereof he would lose the right (a) to become a member of; or (b) to continue to be a member and to observe the lawful rules of . . . any association, organization or union of workers."

Mr. Mosher was of the opinion that the clause applied "only to insured persons who become unemployed and apply for benefit, or who are already in receipt thereof and who refuse to accept such employment as would jeopardize their rights." He asserted that "similar protection should be afforded to the worker already on the job," as, for example, a worker who was required by his employer to "handle struck work, to cross a picket line, or to transport strike breakers." Speaking for the Canadian Congress of Labour, Mr. Mosher claimed that the section should be amended to include employed persons as well as unemployed. He claimed that compensation should not be denied "if as a condition of being employed the individual would be required to join a company union, or to resign from, or refrain from joining any *bona fide* labour organization."

The point raised by Mr. Mosher was discussed in detail. It was emphasized that the Unemployment Insurance Act provides insurance for persons "who are involuntarily out of work." The difficulty of defining "struck work," "sympathetic strikes" and being "separated from employment through misconduct," so as to include every individual case was emphasized. The Chairman, Judge Lindal, stated that in his opinion, the disputed section might be interpreted as follows: "If a man is asked to do something, the doing of which prejudices his union card, then he is justified in refusing to do it. If he loses his job as a result, he is entitled to benefit."

It was finally agreed that Mr. Mosher's submission be studied by the Unemployment Insurance Commission and placed on the agenda of the next meeting of the Committee for further consideration.

Minimum Wage

It was pointed out that the local offices of the National Employment Service do not refer workers to employment at wages below the minimums prescribed by the provincial governments and that "the Federal Government does not enter into the provincial governments' minimum wage field." It was stated, however, that placement officers refer complaints of subnormal wages to provincial authorities who are responsible for determining whether or not there had been any infringements of the minimum wage laws.

The Secretary was instructed to enquire into minimum wage conditions in the several provinces and to present a report at the spring meeting of the National Committee.

Regional Committees' Resolutions

Some 18 resolutions passed by the Regional and Local Employment Committees were presented for the consideration and approval of the National Committee. Several of these related to questions of mainly local interest to the Regional and Local Committees from which they came, such as the construction of specific local public works to meet special unemployment situations; the holding of supper meetings by Local Committees to facilitate better organization; the attendance of Local Committee chairmen at meetings of their Regional Committees; and motions of appreciation for assistance granted by the National Committee in specific cases.

A recommendation was made suggesting that serious consideration be given to

amending the Unemployment Insurance Act "to provide benefit payments for those not capable of work on the same basis as to those who are unemployed, but are employable."

This suggestion, it was pointed out, involves questions not included in the scope of the Act. It was, however, being given "careful consideration" by governmental and other agencies interested in the problem of placing "unemployables."

The appointment of Regional Umpires and the making of procedural changes in the adjudication of applications for benefit were also suggested. Both proposals were referred to the Unemployment Insurance Commission for study and whatever action it deemed necessary.

Employment of Older Veterans

Col. P. J. Philpott, special assistant to the Deputy Minister of Veterans Affairs described a survey undertaken by DVA during 1948, to determine the percentage of older veterans that was "employable," and what measures would be necessary to rehabilitate them. The survey disclosed that 40 per cent were in receipt of unemployment insurance benefits (25 per cent of these had exhausted their benefits), and 35 per cent were not in insurable classes.

On the question of employability, it was found that only six per cent were good referrals; 21 per cent were "fair" and 37 per cent were either "poor" or "unemployable." The remainder, many of them pensioners, did not need employment urgently. Col. Philpott suggested the setting up of advisory committees across the country to assist in solving this rehabilitation problem. Assistance from any source would be welcomed, he said.

It was disclosed that the National Committee had endorsed a resolution submitted by the Pacific Region in 1948, recommending to the Civil Service Commission that the age limit be abolished for clerks and some other grades in the Civil Service. Although receipt had been acknowledged by the Chairman of the Civil Service Commission, no action had been reported. A resolution was passed by the meeting, instructing the Secretary to bring the request to the attention of the Civil Service Commission again.

General Employment Situation

Mr. W. K. Rutherford, Director of Employment Service, UIC, presented a concise report on the current employment situation throughout Canada. He stated

that employers were approaching their labour problems with a greater degree of caution. "Costs are definitely being considered and there is a tendency for employers to set higher standards for their workers." Then too, overtime was being cut down considerably and some employees' earnings were being noticeably reduced as a result. There was also a notable decrease in absenteeism and he suggested that "labour organizations should take the long range viewpoint rather than the short range."

Proposed Seasonal Regulations for Fruit and Vegetable Industry

The Unemployment Insurance Commission gave notice in the *Canada Gazette* on November 27, 1948, of its intention to make seasonal regulations governing the payment of benefit to persons employed in the industry of packing and first processing of fruits and vegetables. These regulations would have the effect of restricting the payment of benefit in the off-season where a person is employed in this industry on a seasonal basis. The regulations would not restrict the payment of benefit during periods of unemployment occurring in the active season.

The Commission held a public hearing on January 10, 1949, to consider any representations made to it with reference to these proposals. The hearing was held as arranged, but was adjourned until February 14.

It is understood that the Commission is concerned about the number of persons employed on a seasonal basis in the industry of fruit and vegetable packing and processing who draw unemployment insurance benefit in the off-season when they are not ordinarily employed or, in many instances, really available for employment. In certain areas the majority of seasonal employees are persons such as housewives and students who are not ordinarily attached to the labour market. The unrestricted payment of benefit to these persons in the off-season constitutes, in the opinion of the Unemployment Insurance Commission, an unwarranted drain on the Unemployment Insurance Fund at the expense of other insured workers. As a result of a survey of the industry in all areas the Commission proposes to declare the following seasons to apply in the areas specified:—

Mr. Rutherford thought, however, that unemployment would decline as soon as spring arrives, "as there is every indication that spring would bring a full employment situation, but it was anticipated that the marginal employee would have more difficulty in obtaining employment."

It was decided that the next meeting of the National Employment Committee would be held in Montreal on April 21 and 22, and that, if arrangements can be made, the Quebec Regional Committee attend the sessions on April 21.

| Area | Season |
|-------------------------|------------------|
| British Columbia | Aug. 1-Nov. 30 |
| Prairie Provinces | July 1-Oct. 31 |
| Ontario | July 1-Nov. 30 |
| Quebec | July 1-Oct. 15 |
| Nova Scotia | Oct. 1-March 31 |
| New Brunswick | Sept. 1-April 30 |
| Prince Edward Island... | No season |

The off-season applicable to a seasonal worker employed in this industry will be the remainder of the year according to the above schedule.

The proposed regulations provide that a claimant defined as a seasonal employee, whose last employment was in the industry of fruit and vegetable packing and processing, will be disentitled to benefit in the off-season unless, besides meeting the usual conditions for the receipt of benefit, he also shows that one of the following conditions applies:—

- (1) that contributions have been paid in respect of him for not less than 420 days during the two years immediately preceding the date on which he makes a claim for benefit (as compared with 180 days for a non-seasonal claimant), or
- (2) that contributions have been paid in respect of him for insurable employment during the off-season applicable in the area where he was employed, and such contributions have been paid for a number of days equal to at least one-quarter of the off-seasons or parts thereof included in the period of two years immediately preceding the date he makes a claim for benefit.

The object of these tests is to show that the claimant has either an average of 35 weeks insurable employment each year, which is substantial enough to justify the payment of benefit in the off-season, or that he has a secondary insurable occupation which he normally carries on during the off-season. If either of these conditions is fulfilled he is deemed not to be subject to any seasonal restrictions.

An analysis of the current employment situation prepared by the Research and Statistics Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

CURRENT EMPLOYMENT CONDITIONS

Employment during January was adjusting itself to conditions of winter weather. Most outdoor work had been temporarily halted and a considerable number of workers, mainly unskilled and semi-skilled, were thrown into the employment market. The peak in seasonal unemployment, however, was expected to be reached within a few weeks, depending upon the break in weather conditions. Unemployment insurance was of invaluable assistance during the slack period, and helped to tide many workers over the brief period of unemployment.

Employment was settling down to its winter slack, which in the past two years was approximately 6 to 7 per cent below its summer peak. For workers as a whole, employment conditions were still favourable and the number employed was at a high for the time of year. Labour turnover was down and records in the industrial relations field were excellent; fewer strikes with fewer workers involved were recorded in January than in any previous post-war month. Nevertheless, jobs were scarce for seasonal workers now idle and in regions such as British Columbia, where many of these casual workers gathered, unemployment was becoming a rather serious, if only temporary, problem.

Generally it appeared from preliminary information that unemployment this year was slightly greater than at the same time last year. This development could largely be accounted for by several specific reasons. First, the usual number of jobs in logging were not available this year, with employment in Eastern Canada about 10,000 less than one year before. Second, agriculture was responsible for the release of more seasonal workers, in part because of the trend towards seasonal grain farming and also, because of higher farm wages, less help was being "carried" during the winter slack. Third, because of the overall expansion in construction employment especially in the more seasonally affected residential, highway, and commercial building, more construction workers were seasonally displaced. Fourth, employment in a few of the manufacturing industries had been temporarily disrupted because of loss of export markets.

Currently, unemployment insurance was playing a larger role in smoothing over the period of temporary loss of income. This was in part because of the increased number of persons being covered by the Unemployment Insurance Act. General expansion in employment, long-term shifts of workers from employment in non-insurable to insurable industries, and new classes of workers being admitted under the Act, all led to this development. In addition, more workers in recent months were being allowed benefits since they were now better able to meet the statutory requirements for qualification laid down in the Act. Under these conditions, workers must prove that they are unemployed but willing to accept suitable employment. The current scarcity of jobs at employment offices had enabled workers to meet this requirement much more readily. Also, under the Act, a certain amount of contribution is necessary before a worker can establish his right to benefit, both for the first time and for renewal. The continuous employment which most workers enjoyed during the summer and fall months had provided in many cases the necessary contributions.

Agriculture

The employment market in agriculture remained quiet during January. Nevertheless, plans were already under way to bring in immigrant farmers for the coming season. Since the available pool of single workers has been largely depleted, a greater immigration of family units was anticipated this year. The importation of families has the advantage of providing a more stable class

REGIONAL EMPLOYMENT TRENDS

Average: 1939=100

Seasonally Adjusted

of worker, although housing accommodation may present a difficult problem. The movement of Dutch workers was to begin around the middle of February and it was expected that about 5,000 families would settle on Canadian farms. Movement of Displaced Persons, which had been dwindling off since early September, would re-commence around the first of April. The latter government-sponsored program was expected to bring in 1,500 single workers, and family units to the extent that housing could be provided.

The Department of Agriculture has recently published a synopsis of the outlook for principal types of agricultural products. This will provide a basis for farmers' production plans for 1949 which will, accordingly, be reflected in the volume and type of labour requirements during the coming season. Generally an increased spring wheat acreage was anticipated in 1949 but a decline in livestock which would reach the market was expected for all classes of meat. However, the Department forecast continued profitable prices in the livestock market. Production of milk, butter, cheese, and ice cream was expected to remain stable, but a drop in egg production was anticipated for the first six months of 1949. According to the forecast, fruit crops will be good, while vegetable acreage was expected to be maintained at the 1948 level.

Non-Agricultural Industry

No let-up in the expansion in industrial production was yet apparent, according to available data. The latest recorded statistics, as given for the month of November, placed the preliminary index of industrial production at 185.2 (1935-39=100). This compared with 178.4 for the same month in 1947.

Industrial employment also was sustained during this period. During November, gains in trade and logging more than offset employment declines in manufacturing, mining, transportation, construction, and hotels and restaurants. At December 1, the index of employment in this series, which covers firms with 15 or more employees in the eight leading industries, stood at 204.1 as compared with 199.6 one year before. In accordance with the usual seasonal pattern, this rise was expected to be reversed during the winter months. Already there had been a decided levelling off in employment expansion with only a .8 change in the index since the beginning of October.

Earnings of the manufacturing wage-earner had decidedly improved during the

three months preceding December 1, not only in the actual dollars paid, but also in relation to changes in the cost of living. The preliminary index of real wages in the manufacturing industry had risen to 106.6 at December 1, exceeding the comparative 1947 index by 2.4 points.

Logging camps in Eastern Canada had completed cutting by January, and hauling, the second stage in the operations, was now under way. Difficulty arose early in the month because of the lack of snow but, by the end of January, hauling was in full swing. Lay-offs began with the change-over in operations, since manpower requirements are smaller in the latter stage.

This year's level of activity was considerably below that of the 1947-8 season, and employment in the woods was correspondingly less. No shortage of labour was reported; in certain areas, surpluses of men developed.

The British Columbia logging industry was exceptionally quiet during January. The extent of seasonal inactivity was increased on the one hand by exceptionally cold weather and heavy snows and, on the other, by uncertain markets for some types of lumber products.

Little change in employment activity occurred in the **mining** industry during January and attention turned to the collective bargaining agreements under negotiation, especially in the coal mining industry.

In the Maritimes, an agreement was reached early in February between the United Mine Workers, representing some 13,000 miners, and the principal operator, Dominion Steel and Coal Corporation. The new agreement, which must be formally ratified by the union membership before becoming effective, called for a 50 cent-a-day increase above the current basic rate of \$7.64. This settlement culminated negotiations which had been carried on for nearly three months.

At the same time, some 14,000 coal miners in Saskatchewan, Alberta, and British Columbia were demanding wage increases varying from \$2 to \$3 per day. This would boost the daily wages of most workers up to the \$14 mark. Rock miners were now being paid \$11.43 per day; timber-men, \$10.95; machine-men (coal cutters), \$12.47; actual coal-miners, \$10.95. Conciliation proceedings were being carried on and a report was expected shortly after the expiry date of the contract, February 16.

Employment operations were slow in **manufacturing** during January. As usual

for the time of year, a number of firms laid off staff for inventory purposes or for making adjustments in production schedules. In addition, a number of non-seasonal lay-offs took place during the month. A report on such lay-offs is obtained from all local Employment Service offices and, while these would not necessarily cover all persons released, it would, because of unemployment insurance, touch on all major lay-off programs. During January, 20 per cent of the reported lay-offs were still caused by shortage of materials, particularly steel. Shortage of orders, however, was the chief reason for releasing workers. Within this category, over 50 per cent of those reported were in the lumber and automobile manufacturing industries.

Wage increases were still being granted in a number of manufacturing firms although, as a whole, this was not an active period for negotiations between employers and employees. Wage increases, for which information was received during the month of January, varied from 5 to 35 cents per hour. More workers in the textile industry benefited than in any other group; however, the highest wage increase occurred in the washing machine manufacturing industry.

Construction employment was at its seasonal low during January and many workers, especially the unskilled and semi-skilled, were temporarily laid off. The greater amount of unemployment this year than last among construction workers may be attributed to two factors. First, since construction employment during the summer and fall of 1948 had expanded by approximately 40,000 over the previous year, more workers were affected by winter lay-offs. Secondly, highway, residential and commercial, rather than industrial, construction accounted for a major portion of the activity in the past year, and work on such non-industrial projects is, for the most part, discontinued during the winter months.

Employment activity in **transportation** was quiet during January, reflecting normal mid-winter slackness. The number employed in this industry during the winter is usually some five per cent below the fall peak. In railway transportation, hirings were small during January, largely on account of the light snowfalls. Snow-removal jobs, however, increased by the end of January, as weather conditions became more severe, especially in the Prairies. Some lay-offs occurred in north-western Ontario and the Maritimes, owing mainly to light freight traffic.

Water front activity on the East coast had not provided the employment which was anticipated earlier in the season. Halifax reported that only about 50 per cent of the longshoremen had been able to obtain work at any one time. Similar reports were received from Saint John. This situation appeared to be the result of lower shipments of packaged freight. Although grain movements had been equal to if not greater than last year's volume, less labour was requested for this type of work.

Trade establishments continued their usual post-Christmas lay-offs into the first few days of January. The hiring rate during the remainder of the month was low with both retail and wholesale trade very quiet in all regions. This condition was expected to continue until March when department stores and mail order houses will begin to build up staff for the Easter trade. For the time of year, however, retail sales seemed to be holding up fairly well. In dollar value, department store sales during January were above those of 1948. For the week ending January 29, sales were 11 per cent over the corresponding period last year. Most, if not all, of this increase, however, was due to price advances.

A surplus of sales applicants, especially female workers, was common to most National Employment Service offices during January. It was reported that orders received for help were readily filled locally, usually by single girls with some experience in this line of work. Stock taking and a series of sales enabled many stores to retain most of their regular employees during the in-between season.

Employment Service Activities

The Employment Service was opening its doors to one of the heaviest influx of workers in its peacetime history, certainly the most pronounced for the past two and one-half years. Until December, the entrance of job-seekers was moderate, in terms of previous years' records but, during the last weeks of 1948, employment office activity increased. New applications during December averaged 36,000 a week as against 30,000 in the same month of 1947. Applications remaining on file jumped accordingly; an average of 13,500 unplaced applicants was added each week during the months of December and January. By the end of January, 199,000 men and 50,000 women were registered for work at employment offices and there was still little indication of any reversal of trends. However,

the month of February usually sees the levelling off, if not the first break, in the upward movement.

The increase in applications did not necessarily mean the same proportionate rise in unemployment. The extent to which workers will register at employment offices will vary from time to time. Currently, the incentive to use the facilities of the Employment Service seemed to be much greater than in former years. This primarily was due to the advantages of unemployment insurance. More workers were now covered by the Unemployment Insurance Act, greater numbers have built up sufficient contributions to qualify for benefits, and high living costs made collection of benefits, even during brief periods of unemployment, a necessity in many cases.

A closer examination of the statistics showed that a few occupations stood out in the increase over the year, although minor advances occurred in most classifications. A number of occupations recorded a decline. Among these were clerical, professional, skilled and semi-skilled miners and leather workers. These comparisons were made as at the beginning of 1949 and 1948, the latest date for which an occupational break-down is available.

Occupations in the construction industry showed the chief gain, accounting for over 20 per cent of the total advance, while the lumber and sawmill industries were responsible for 15 per cent of the over-all rise. Another 5 per cent of the gain took place in the metalworking industries. A decline in shipbuilding was the principal cause; structural iron and steel workers and welders and flame cutters were most affected. The transportation equipment industries accounted for 5 per cent more of the increase at January 1.

As among the occupations, the incidence of higher registrations varied from area to area. A number of local office areas and regions showed decided gains, most indicated moderate advances while a few showed over-all declines.

British Columbia showed the greatest increase in applicants since it depended heavily on construction, logging, sawmills, and shipbuilding, all of which had been adversely affected. Unplaced applicants in this region at the end of January were higher than ever before recorded in the history of the Employment Service. Quebec suffered next severely. This region was similarly dependent on many of the declining industries although greater industrialization here had somewhat softened the

over-all effects. Nova Scotia stood out singularly in that no appreciable change had occurred over the year. In Ontario cities such as Ottawa, Chatham and Sarnia, unplaced applicants recorded a decline.

Within each region the increase was spread fairly consistently over the whole area. The larger cities generally did not advance out of line with the rest of the region. In fact, the rate of increase in Montreal and Toronto, and in many of the Prairie cities, did not even keep pace with the regional gain.

Out of every four persons registered with the Employment Service at the beginning of the year, three had placed claims for unemployment insurance. The possibility of qualifying for benefit was perhaps the best in the history of the Unemployment Insurance Act. Primarily this was because of the general scarcity of jobs. During December, only 1,300 of the 46,000 claims adjudicated were disqualified because of "refusal of offer of work" or "not unemployed". During December of the previous year when there were 18 per cent fewer claims, 2,300 were disqualified because of these reasons. The added number of years in which the Act has been operating also will have the effect of increasing the number with sufficient contributions to qualify for benefit.

Regional Analysis

Seasonal influences were in full force in the *Maritime* region during January. New Brunswick particularly was affected and many seasonal workers were temporarily displaced. Employment activity in Nova Scotia, however, appeared to be holding up very well; at the end of January, Halifax, Sydney, New Glasgow, and other centres recorded fewer persons seeking work than at the same time last year. The region as a whole continued to support higher employment levels this year in most main industrial groups; construction employment especially had shown appreciable gains.

Mild weather had enabled an exceptionally high level of building to be carried on this winter. All skilled tradesmen were fully employed and excellent prospects seemed assured for the future. However, the lack of snow seriously held up logging operations, which were already operating below normal because of loss of markets. Regular winter trade also had been affected by the mild weather, and clothes, footwear, and other winter stocks were moving much slower than usual.

Coal mines were operating steadily and no lay-offs or production difficulties were

anticipated. Negotiation of the 1949 collective agreement was under way in most mines and already a settlement had been reached between the main coal operator and the union. This was the second year of peaceful negotiations in the industry, contrasting to the prolonged strike action of 1946.

Employment in the *Quebec* region reached its seasonal low during January. General industrial activity rose slightly towards the end of the month, however, reflecting the larger and more evenly distributed supply of hydro-electric power. Textile mills, furniture factories, and heavy industries continued to operate at near capacity. Aircraft production was affected by material shortages but hirings kept up steadily.

The logging cut was now completed but hauling had been delayed for some weeks because of snow and mild weather. Mining was benefiting from a much improved supply of workers; tonnage was rising and new activity was being planned. Construction employment, however, was experiencing a temporary lull.

The outlook for Quebec for 1949 was considered good. Employment had risen during 1948 to a point slightly above the wartime peak, and further expansion was indicated. Machinery building, transportation equipment, textiles and mining were expected to advance and a heavy construction program was anticipated. Weak spots, however, may continue to develop in some industries because of market difficulties. Logging and shipbuilding particularly may thus be affected.

The *Ontario* region swung into winter weather conditions without any serious disruption to employment. The labour market was quiet during January although the easier labour situation brought about a number of developments in the employment field: labour turnover was down, inefficient staff was being weeded out, and employers' hirings were increasingly selective. Some seasonally displaced workers experienced difficulty in finding jobs but few centres reported any degree of unemployment.

The year-end taking of stock revealed that many manufacturing firms were carrying much larger volume of inventory this year. This created a certain apprehension among employers, although the employment trend for the industry as a whole still pointed upwards, if only slightly. Textile firms were operating fully, with no shortage of labour. Meat plants were seasonally reducing employment, although declining export markets were also a factor. Iron and

steel industries were working at full force; new production records were reached this year but steel supplies were still unable to meet demand. A major lay-off occurred in the auto plant in Windsor during January because of the loss of the South Africa export market.

Mild weather had extended the construction season this year and skilled tradesmen were still being hired. The mining industry appeared to have built up sufficient staff and few hirings were taking place. In logging, lay-offs were beginning with the commencement of hauling, but fewer workers were involved this year because of reduced employment levels in the industry.

Employment conditions in the *Prairie* region reflected the seasonal lull, but signs pointed towards renewed activity shortly. The employment situation as a whole showed no extensive change as compared with 1948; only minor advances occurred in persons seeking unemployment insurance in the larger cities of Winnipeg, Edmonton, and Calgary. However, a substantial rise in claims had occurred in the logging centres of Port Arthur and Fort William.

Plans were nearing completion for the expansion of ore bodies in the Lake Superior area, and tonnage was expected to be raised to three million tons per year. Negotiations were under way between operators and unions in the coal mines in Saskatchewan and Alberta; the present agreement will expire on February 16. Wage increases ranging from \$2.50 to \$3 a day were being requested.

Construction activity was at a minimum during January, but another large-scale construction program was scheduled for 1949. A wide variety of building projects were being planned including industrial, mining, housing, public utility and commercial building. Improved supplies of building materials were expected.

Temporary disruptions of employment continued in the *Pacific* region during January. Heavy snows, cold weather, and power shortages aggravated the already steep seasonal decline. This year had also seen as large, if not larger, influx of Prairie workers during the winter, which added extensively to the numbers seeking work. Then again, market difficulties in lumber and shipbuilding had not yet been solved, and lay-offs were still taking place. However, the region was fortunate in that all major industries were covered by unemployment insurance and, while some casual "drifters" may not be eligible for payment, the majority of job-seekers were now in receipt of benefits.

Inclement weather conditions during January had brought about two adverse developments—power shortages and disturbances to outside work. Electric power shortages had resulted in a demand for a 30 per cent reduction of power for industry in Vancouver, and cut-backs in late shifts and working hours had occurred. Critical power shortages had also developed in Vernon although no restrictions were yet in force. Sawmill employment had been particularly affected and unless power supplies

were built up shortly a serious shortage of sawdust fuel may develop.

Heavy snows and cold weather interrupted employment in logging, construction, and transportation and much outdoor work had to be discontinued. With the passing of these weather conditions, however, employment was expected to pick up rapidly. A heavy construction program for both industrial and government was anticipated; many contracts had already been signed and more were to be confirmed later.

Unemployment in Trade Unions December 31, 1948*

Trade union unemployment in Canada increased to 3.4 per cent at the end of December, 1948, from 1.0 at the close of the previous quarter and 1.7 at December 31, 1947. At the date under review 2,676 locals reported a combined membership of 538,153. Reports were received from 2,536 locals with 506,255 members in the previous quarter, while at the end of December, 1947, the percentage was based on reports from 2,664 locals representing 511,002 members. Unemployment in trade unions rose in manufacturing, construction, service and logging.

In this analysis unemployment refers only to involuntary idleness due to economic causes. Persons who are without work because of illness, a strike or a lockout, or who are engaged in work outside their own trade are not considered as unemployed. As the number of reporting unions varies from quarter to quarter with consequent

variations in the membership upon which the percentage of unemployment is based, it should be understood that the figures refer only to organizations reporting.

Table C-11 shows the percentage of union unemployment at certain dates in each province. As compared with the previous quarter, the percentage rose in all provinces but Nova Scotia. With the exception of Nova Scotia and New Brunswick the latest figures were higher than at the end of December, 1947.

A separate compilation is made each quarter of trade union unemployment in the largest city in each province with the exception of Prince Edward Island. Compared with the previous quarter the percentage decreased only in Saint John where it declined from 2.8 to 2.6. The percentage rose in Halifax, from 5.0 to 7.8, in Montreal, from 0.5 to 1.8, in Toronto, from 0.9 to 1.6, in Winnipeg, from 0.9 to 2.5, in Regina, from 1.2 to 1.4, in

* See Tables C-11 and C-12.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

Edmonton, from 0.4 to 3.9, and in Vancouver, from 2.2 to 6.2. In comparison to December, 1947, the percentage declined in Halifax, Saint John and Montreal.

Returns were received from 1,090 locals in the manufacturing industries. These reported 285,885 members of whom 9,944 were unemployed at the end of December. At the end of the previous quarter 3,247 of 265,030 members reported by 1,015 locals were without work. At December 31, 1947, reports were received from 1,068 local unions with 261,796 members of whom 3,962 were unemployed. At the date under review 2,500 of 19,242 union members were unemployed in the automobile industry in Ontario because of re-tooling.

In the transportation group, reports were received from 874 locals with a total of 111,150 members of whom 1,606 were unemployed at the reporting date. Three months earlier 496 of 104,234 members had been unemployed while at the end of December, 1947, there were 1,070 unemployed of a total of 106,570 members.

Unemployment in mining rose slightly from 0.4 to 0.5 per cent. Reports were

received from 70 locals with 22,422 members. Unemployment among coal miners was unchanged at 0.2 per cent while it rose from 2.3 to 3.4 per cent among non-metallic mineral miners.

The percentage of trade union unemployment in building and construction rose from 1.5 to 7.9. Reports were received from 228 local unions with 53,428 members. Severe winter conditions, especially in Western Canada and British Columbia, were largely responsible for this increase in unemployment. The percentage increased among bricklayers, from 0.2 to 6.3, painters, from 1.2 to 7.7, carpenters, from 2.4 to 10.5, and miscellaneous building workers, from 0.7 to 12.8. At the end of 1947, the percentage of unemployment in the construction group was 6.5.

In public and personal services, the percentage of trade union unemployment increased to 1.5 from 0.6 in the previous quarter.

In the lumbering and logging industry of British Columbia, two locals which had 2,176 members reported 1,440 of these as being unemployed.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index advanced from 158.9 to 159.6 between December 1, 1948, and January 3, 1949. All budget group indexes were firm, but more than half of the rise was due to changes in service rates including health, personal care, laundry and fuel gas which are priced only at annual intervals because of the characteristic stability in rates for services of this kind. The food index rose from 202.0 to 202.2 between December 1 and January 3, with further declines in egg and fruit prices acting as a partial offset to generally firmer levels for other foods. Fuel and light moved up from 129.1 to 130.0. The clothing index rose from 181.5 to 181.9, and home furnishings and services from 166.2 to 167.0, on scattered increases which affected nearly all sub-groups. The advance in miscellaneous items from 124.6 to 126.6, reflected changes in health and personal care services already mentioned. The rent index remained at 121.7.

From August, 1939, to January, 1949, the increase in the cost-of-living index was 58.3 per cent.

Cost of Living in Eight Cities

City cost-of-living indexes for seven of the eight regional centres moved higher between December 1, 1948, and January 3, 1949. Vancouver remained unchanged at 160.8 when a decline in foods was sufficient to balance increases in clothing and miscellaneous items. Higher costs for services in the miscellaneous group coupled with small increases in foods and home furnishings and services supported index advances for other centres. Composite index increases between December 1, 1948 and January 3, 1949, were as follows: Halifax 1.5 to 152.3; Winnipeg 1.2 to 153.4; Edmonton 0.9 to 154.5; Montreal 0.8 to 162.3; Saint John 0.7 to 156.2; Toronto 0.5 to 155.0 and Saskatoon 0.4 to 162.0.

Wholesale Prices, December, 1948

There was a slight decline of 0.2 to 159.5 (base 1926=100) in the December general wholesale price index. However, this figure showed an increase of 11.1 per cent during the year 1948. Between November and December, component group changes were mixed. Wood products weakened 1.5 points to 192.2 due to recessions in British Columbia red cedar lumber and shingles.

* See Tables F-1 to F-6.

COST OF LIVING AND WHOLESALE PRICES IN CANADA FROM JANUARY 1914 TO DATE

(Base 1935-39=100)

An easier tone for silver prices was responsible for a drop of 0.7 to 163.5 in non-ferrous metals. Vegetables products moved down 0.6 to 139.3 when losses in barley, oats, hay and onions outweighed increases in millfeeds, oranges and lemons. Similarly a decline of 0.5 to 176.0 in animal products reflected weakness in eggs and hides. These overbalanced increases in livestock, fresh meat and whitefish. Four groups were higher. Chemicals and allied products rose 2.1 points to 129.1 supported by firmer prices for soap and indigo although formaldehyde and shellac were easier. Iron and steel products moved up 1.0 to 167.1 due to increases in foundry pig iron and steel sheets, while non-metallic minerals gained 0.6 to 137.6 when higher quotations for

coal, sand, gravel and crushed stone proved of more importance than weakness in gasoline and coal oil. Textile products rose 0.6 to 162.0 as higher prices for raw wool and cotton knit goods overbalanced a decline in cotton yarn.

Canadian farm product prices at wholesale were slightly easier in December, the composite index declining 1.0 to 142.6. When compared with December, 1947, there has been a price increase of 4.0 per cent. Both sub-groups were lower in December. The field section receded 1.4 to 116.5 due to weakness in barley, oats, hay and onion prices, and animal products were down 0.4 to 186.3 when recessions in eggs and hides overbalanced strength in livestock and raw wool.

STRIKES AND LOCKOUTS*

Canada, January, 1949

There was little strike activity in Canada during January, 1949. Fewer workers were involved in strikes than in any month since November, 1944, and the time loss was the lowest recorded for any month since June, 1945. Preliminary figures for January, 1949, show 10 strikes and lockouts in existence, involving 1,811 workers, with a time loss of 9,700 man-working days, as compared with 11 strikes in December, 1948, with 2,481 workers involved and a time loss of 18,939 days. In January, 1948, there were 19 strikes, involving 12,595 workers, with a time loss of 135,780 days. Based on the number of wage and salary workers in Canada, the time lost in January, 1949, was .01 per cent of the estimated working time, as compared with .02 per cent in December, 1948, and .17 per cent in January, 1948.

Five strikes in the textile industry in various centres in Ontario and Quebec accounted for almost three-quarters of the total workers on strike during the month and caused three-fifths of the total time loss.

Of the 10 strikes recorded for January, 1949, one was settled in favour of the workers, three in favour of the employers, two were compromise settlements and one was indefinite in result, work being resumed pending final settlement. At the end of the month three strikes were recorded as unterminated, namely: wood heel factory workers at Montreal, P.Q., knitting factory workers at Paris, Ont., and woollen factory workers at Huntingdon, P.Q.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., on May 30, 1946; soft drink factory workers at Edmonton, Alta., December 1, 1947; printing pressmen at Toronto, Ont., December 15, 1947; costume jewellery factory workers at Toronto, Ont., April 29, 1948; coal miners, Edmonton District, Alta., January 13, 1948; and seamen, Great Lakes and St. Lawrence River, June 6, 1948.

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review, issued as a supplement to the *LABOUR GAZETTE* for April, 1948, and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

* See Tables G-1 and G-2.

The number of work stoppages beginning in November, 1948, was 126 and nine were still in progress from the previous month, making a total of 135 during the month. In all stoppages of work in progress in the period there were 29,200 workers involved and a time loss of 88,000 working days was caused.

Of the 126 stoppages which began during November, eight arose out of demands for advances in wages; 45 over other wage questions; five on questions as to working hours; 17 on questions respecting the employment of particular classes or persons; 48 on other questions respecting working arrangements; two were on questions of trade union principle; and one stoppage was in support of workers involved in another dispute.

United States

Preliminary figures for December, 1948, show 125 strikes and lockouts beginning in the month, in which 40,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 600,000 man-days. Corresponding figures for November, 1948, are 200 strikes and lockouts, involving 90,000 workers, with a time loss of 1,900,000 days.

Preliminary estimates for the year, 1948, show 3,300 strikes and lockouts, involving 1,950,000 workers and causing a time loss of 34,000,000 man-days. Comparable figures for 1947, are 3,693 strikes and lockouts with 2,170,000 workers involved and a time loss of 34,600,000 days.

FATAL INDUSTRIAL ACCIDENTS IN CANADA*

Fourth Quarter of 1948

There were 308 industrial fatalities in the fourth quarter of 1948 according to the latest reports received by the Department of Labour. In the previous three months there were 394 including 18 in a supplementary list. The accidents recorded are those which involved persons gainfully employed, during the course of or arising out of their employment and included deaths which resulted from industrial diseases as reported by the provincial Workmen's Compensation Boards.

During the quarter under review there were four industrial accidents which resulted in the death of three persons in each case. On October 9 an engineer, fireman and trainman were killed at Mattawa, Ontario, when a coupling failed and cars ran down a grade striking the engine on a ballast train. Three seamen were drowned in British Columbia coastal waters on November 16 when their craft was shipwrecked. On December 1 three crew members of a fishing vessel were asphyxiated by the fumes of an auxiliary engine at Port Alberni, British Columbia. A train struck a truck at Laprairie, Quebec, on December 27 and three agricultural workers were killed.

Statistics on industrial fatalities are compiled from reports received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Newspaper reports are also used to supplement these data.

Grouped by industries the largest number of fatalities, 59 was recorded in manufacturing and transportation respectively. In manufacturing, 21 occurred in iron, steel and products and 11 in saw and planing mills. During the previous quarter 79 fatalities were recorded in manufacturing including 22 in saw and planing mills and iron and steel products respectively.

Of the 59 fatalities occurring in transportation during the fourth quarter of 1948 there were 33 in steam railways and 12 each in local and highway and water transportation. In the previous quarter 73 fatalities were recorded in transportation including 18 in steam railways, 25 in local and highway transportation, and 32 in water transportation.

In the mining group 47 fatalities were noted of which 23 were in metalliferous mining and 19 in coal mining. In the previous quarter there were 38 fatalities in the mining group including 23 in metalliferous mining.

The number of fatalities in logging increased from 32 to 40. Fatalities in the construction industry decreased from 64 in the third quarter to 29 in the fourth quarter of 1948. Decreases in the number of recorded fatalities from 41 to 23 occurred in agriculture and in service from 33 to 18.

The most important cause of fatalities was moving trains, water-craft and other vehicles which caused 92 industrial fatalities

* See Tables H-1 and H-2.

during the quarter as compared with 128 in the previous quarter.

Falling objects caused 63 deaths and falls of persons 40. Industrial diseases, infection and other causes resulted in 46 fatalities while dangerous substances caused 33 deaths.

The largest number of industrial fatalities was in Ontario where there were 116. In British Columbia there were 59 and in Quebec 46.

During the quarter under review there were 107 fatalities in October, 108 in November and 93 in December.

SELECTED PUBLICATIONS RECEIVED RECENTLY IN LIBRARY OF DEPARTMENT OF LABOUR

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the Publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available. (1) Labour Force survey figures given are as of November 20, 1948, November 8, 1947 and November 9, 1946. (2) Base 1926=100. (3) Figures are as at end of quarter ending Dec. 31, 1948, 1947, 1946, 1943 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946=100. (5) First of month. (6) Base 1935-1939=100. (7) Figures are for four week periods. (8) Annual figures; monthly not available.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5, and the statistics of weekly earnings are therefore slightly different.

| Week preceding | Average Hours Worked | | | Average Hourly Earnings | | |
|--------------------|----------------------|---------------|-------------------|-------------------------|---------------|-------------------|
| | All Manufactures | Durable Goods | Non-Durable Goods | All Manufactures | Durable Goods | Non-Durable Goods |
| | no. | no. | no. | cts. | cts. | cts. |
| Dec. 1, 1944..... | 46.3 | 46.9 | 45.5 | 70.5 | 77.9 | 60.4 |
| Dec. 1, 1945..... | 44.8 | 44.9 | 44.6 | 67.0 | 74.0 | 60.6 |
| Dec. 1, 1946..... | 43.2 | 43.2 | 43.2 | 74.5 | 81.8 | 67.6 |
| Dec. 1, 1947..... | 43.5 | 43.8 | 43.2 | 85.6 | 92.8 | 78.3 |
| *Jan. 1, 1948..... | 38.3 | 38.5 | 38.1 | 86.6 | 92.9 | 80.0 |
| Feb. 1, 1948..... | 42.8 | 42.7 | 42.8 | 86.6 | 93.2 | 80.1 |
| Mar. 1, 1948..... | 43.2 | 43.4 | 43.0 | 88.0 | 95.0 | 80.8 |
| *Apr. 1, 1948..... | 41.6 | 41.8 | 41.4 | 89.0 | 95.6 | 82.1 |
| May 1, 1948..... | 43.1 | 43.4 | 42.7 | 89.4 | 96.2 | 82.4 |
| June 1, 1948..... | 41.7 | 41.6 | 41.7 | 91.4 | 98.4 | 84.4 |
| July 1, 1948..... | 42.0 | 42.3 | 41.6 | 92.3 | 99.2 | 85.2 |
| Aug. 1, 1948..... | 42.1 | 42.0 | 42.1 | 92.7 | 99.8 | 85.6 |
| Sept. 1, 1948..... | 41.7 | 42.0 | 41.5 | 93.4 | 100.9 | 85.8 |
| Oct. 1, 1948..... | 43.0 | 43.3 | 42.7 | 94.6 | 102.6 | 86.6 |
| Nov. 1, 1948..... | 43.1 | 43.2 | 43.1 | 95.5 | 103.4 | 87.6 |
| Dec. 1, 1948..... | 43.2 | 43.4 | 43.1 | 95.9 | 104.1 | 87.7 |

* The averages at these dates were affected by loss of working time at the end-year holidays in the case of January 1, and by the Easter holidays in the case of April 1, 1948.

TABLE C-7.—WEEKLY SALARIES AND WAGES IN MANUFACTURINGSOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

| Week Preceding | All Manufactures (1) | | Durable Manufactured Goods | | Non-Durable Manufactured Goods | |

* Industries classed in the durable manufactured industries.

¹ Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c. the latest figures are as follows—Oct. 1, 1948, 217-5; Nov. 1, 1948, 219-2; Dec. 1, 1948, 223-0; at Dec. 1, 1947, the index was 185-2.

² Chiefly street and electric railways. ³ For information respecting the sex distribution of the persons in recorded employment, see Table C-5.
